Sources of Data: American Banker questionnaire, and banks' yearend earnings releases. **Assets** and **Deposits** include all consolidated subsidiaries, both domestic and foreign. Data for 1986 are as reported in 1987 and have not been restated for acquisitions, mergers, or changes in accounting principals. **Banks Controlled:** includes only domestic commercial banks controlled, according to definitions of Bank Holding Co. Act. **Branches Controlled** are domestic commercial bank branches only. **(a)**— Yearend data were not available, therefore Dec. 31, 1987 data for Union Bank were used. These data do not include Union Bancorp.'s subsidiary, United Bank, Phoenix. On 1/28/88, Citicorp agreed to acquire United Bank. On 2/16/88, Bank of Tokyo, Ltd. agreed to acquire Union Bancorp. The acquirer will be California First Bank, San Francisco, a Bank of Tokyo subsidiary. The seller of Union is Standard Chartered Plc, London. **(b)**— Acquired First Valley Corp., Bethleham, Pa., on 1/29/88. **(c)**— Acquired Delaware Trust Co., Wilmington, on 2/10/88. **(d)**— Acquired by First Interstate Bancorp., Los Angeles, on 1/29/88. **(e)**— Acquired by PNC Financial Corp., Pittsburgh, on 2/29/88. **(f)**— Formerly First Jersey National Corp. Changed title after being acquired by National Westminster Plc, London, on 2/1/88.

Sources of Data: American Banker questionnaire, and banks' yearend earnings releases. **Primary capital** is the sum of total shareholders' equity; mandatory convertible debt; allowance for possible loan and lease losses; and minority interest in equity accounts of consolidated subsidiaries. **Total capital** is primary capital plus secondary capital. **Secondary capital** is limited-life preferred stock plus qualifying debt. **The primary capital ratio** is calculated by dividing primary capital on Dec. 31 by total assets on Dec. 31, expressed as a percentage. **Note:** The American Banker ratio is not calculated in the same manner as the Federal Reserve Board ratio. The American Banker does not add back the allowance for possible loan and lease losses to total assets, as the Fed does. For most of the firms listed, the American Banker ratio will be from 5-to-20 basis points higher than the Fed ratio, depending on the size of the bank's allowance for possible loan and lease losses. **(a)—** Union Bancorp. data for 12/31/87 were not available, therefore, Data for its lead bank, Union Bank, were used. **(e)—** Estimated by American Banker from capital ratios reported on firm's earnings release. **N.A.—** Not available. **Note:** Yearend 1987 capital data for First City Bancorporation of Texas, Inc., Houston, were not available, therefore First City has been excluded from this listing. At yearend 1986, First City ranked 41st in primary capital with $972.3 million.

BANK HOLDING COMPANIES

Top 100 Earners in Banking

Banks and Bank Holding Companies Ranked by 1987 Net Income

Sources of Data: American Banker questionnaire, and banks' yearend earnings releases. Top 100 earners based on net income for banks and bank holding companies. **Net Income** is income after taxes and minority interest, but before preferred dividends, extraordinary items, and significant and unusual transactions. The 1986 net income is as reported in 1987 and has not been restated. **Adjusted net income** is net income for certain non-recurring items such as: gains (losses) from sales of buildings, branches, subsidiaries, securities sold to settle loans or debt, proceeds from equity/debt swaps, and other nonrecurring items such as venture capital profits (losses). All non-recurring items, which are subtracted from net income, are on an after-tax basis, wherever possible. The **"special" loan loss provisions** related to LDC (loans to developing countries) lending taken by banks wikth a large international presence are not considered non-recurring items by American Banker. **Return on Assets** is net income divided by average assets. **Return on equity** is net income divided by average total equity capital, unless otherwise indicated. **(★)**— Return on common equity capital. **(*)**— Calculated by American Banker. **(c)**— A multibank holding company. **(d)**— A one-bank holding company. **(f)**— Net income for 1987 were not available for Union Bancorp., therefore, data for its lead bank, Union Bank, were used, **(m)**— A subsidiary of Boston Co. Inc., which in turn, is a subsidiary of Shearson Lehman Brothers.taken by banking firms. **Please note: Central Bancorp., Inc., Cincinnati** is not included in this table because net income for the full year 1987 were not made public. Central ranked 70th in net income in 1986 with $53.1 million. For the nine months ended Sept. 30, 1987, Central reported net income of $41.1 million. Central Bancorp. was acquired by PNC Financial Corp., Pittsburgh, on 2/29/88.

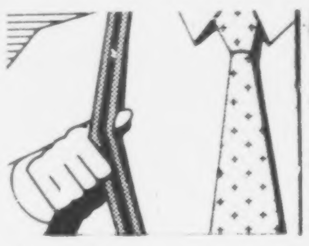
An American Banker Special Report

Banks Encroach on Wall Street's Turf

By DAVID NEUSTADT



Since the early 1980s, commercial banks have made a concerted effort to reap investment banking fees from activities not expressly prohibited by regulators and the Glass-Steagall Act. For the big banks, these areas are crucial for maintaining relationships with major corporations. In a five-part series beginning today, the *American Banker* looks at how banks have progressed in key areas: private placements, international mergers advice, domestic merger and acquisition advice, municipal bonds, and swaps, including currency and interest rate protection.

NEW YORK

COMMERCIAL banks have passed a major test of their ability to compete on Wall Street's turf. They have become major competitors in the private placements market.

In no other area traditionally dominated by investment banks have the commercial banks done as well.

In 1983, Bankers Trust Co. — the commercial bank most active in private financings — had only 11% of the volume of Salomon Brothers Inc., that year's market leader. In 1986, the leading commercial bank in the field, Citibank, had only a third of the volume of the top firm, Goldman, Sachs & Co.

The figures for 1987 show that the gap between the top investment bank and the top commercial bank can no longer be considered insurmountable. Bankers Trust, again the top commercial bank, had $9 billion in private financing, which amounted to 60% of top-ranked Salomon's $14.9 billion. And Bankers Trust, which more than doubled its 1986 volume, is now within reach of second place First Boston, which was agent on $11.5 billion and sixth place Merrill Lynch Capital Markets, with $9.3 billion.

"We are right up there next to Merrill and Goldman," crows Neil Powell Jr., a Bankers Trust managing director.

After seven years of false starts, commercial banks made a sustained push in the private placement market that carried them to a solid 26% market share in 1987, from 12.3% in 1984, according to IDD Information Services.

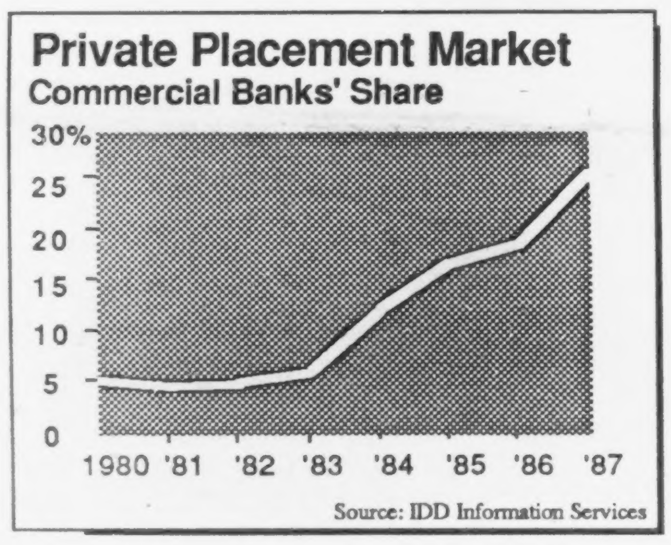
WHILE only two commercial banks, Bankers Trust and Morgan Guaranty Trust Company of New York, were among IDD's top 10 private placement agents, banks represented eight of the top 20.

"They have become a substantial force," says Ralph Fletcher, a Salomon Brothers director.

A private placement is the sale to a limited number of investors of a security not registered with the Securities and Exchange Commission. The key to success is matching the needs of institutional buyers and corporate issuers. Since there is no need for registration, deals can be done quickly, and personal relationships are important.

"Hundreds of millions of dollars worth of deals have been done on basically an oral handshake over the phone," says John Plover, an investment officer at the Travelers.

Private Placement Market
Commercial Banks' Share



Source: IDD Information Services

The market is growing fast. Private financings totaled $135 billion in 1987, up from $73 billion in 1985, according to IDD.

"The private market is anywhere from 25% to 40% of the total capital raised in the U.S. capital markets, so just by being good in that business we can cover, say, one-third of the U.S. long-term capital market," says Robert Lawrence, who runs Citibank's private placement unit.

Insurance companies say they often cannot find enough good placement deals. "From way back we sought out the banks" to educate them about private deals, says Mr. Plover. "We need more sources of deals."

Private placements are attractive for several reasons.

- Banks can provide financing without using their own capital. A private placement agent does not buy securities, but acts as intermediary bringing together the corporate borrower and the institutional investor.
- Banks can garner fee income with relatively few expenses. Fees range from one-eighth of one percent on simple debt issues up to 2% or even higher on complex structured deals. As much as 80% of the fees drop to the bottom line.

Assuming an average fee of 1%, revenues on Bankers Trust's $9 billion of placements could have been $90 million, and profits could have been as high as $70 million. "It's highly profitable," says Mr. Powell, who would not confirm or deny the estimate.

- Institutions can develop investment banking skills in anticipation of the repeal of Glass-Steagall Act. "Glass-Steagall leaves us with a more limited set of tools domestically, which means we want to be very, very strong and very, very capable with those tools that we have," says Tracy Lavery, a Chemical Bank managing director.

Despite the enticements, banks have

Early Retirement Offers Pros and Cons for Banks

By DR. PAUL S. NADLER

MANDATING retirement dates is a tough decision for most banks. It is certainly true as far as members of boards of directors are concerned.

All too often, a bank has a board whose outside members are no longer active in their businesses. The telltale clue is when the identification next to the name says "investments" or simply "ex-president" or "retired."

In some instances, the contacts, experience, and wisdom of these people can help the bank markedly. But in other cases, their aging can be a decided drawback. Many of them have honestly become out of date and therefore cannot deal with the complex issues that a board should handle. Other retirees look at their board status as just something to do, so they take up board time with reminiscences and reminders of how it was done better in the past.

Also, they are often afraid of losing the seat, because it is the one business tie they keep. So they go along with management a little too readily out of fear of not being renominated. Thus they end up not doing the job they are supposed to do as individuals who can question management's decisions.

Nadler Says:

It's a tough call: youth and its boundless enthusiasm — or older people with contacts, experience, memories, and justified fears of what might happen.

Finally, the basic reasons why outside board members are appointed are their knowledge of outside industry and professions and their contacts. But the fact that they have retired from their regular businesses makes them far less useful to the bank than they were when they were active.

Thus some banks have a policy of requiring that board members resign when they leave their outside employment, no matter what their age. Nothing burns a chief executive officer more than to have a member of a director's family call up and say, "What will Dad do if you throw him off the board?" A board membership is not the recreation department of a retirement home; it is the basic guts of a bank.

More Prevalent

In any event, the establishment of a mandatory retirement age for all board members, whether or not they are still active in their businesses, is becoming more and more prevalent, both because of regulatory demands and changed bank policy. Undoubtedly these policies can be hard to implement when it means throwing a good friend off the board after many years of association.

But as lawsuits against boards multiply and board members become more and more aware of their responsibilities, they also have to think of their own positions. This often means accepting the fact that a board post cannot be an honorary award. Each board member must help push the board along.

While we are seeing retirement age of board members scaled down in our highly competitive and litigious banking environment, what about the age for retirement of bank officers and employees?

In many instances, the requirements are set by law or tradition, and there is little the bank can do about them.

But are early retirement policies sensible?

Some banks have instituted a policy of offering early retirement at, say, 55, to clear the path for younger people who otherwise might leave out of frustration.

In some instances, this has been marvelous for the bank. It has cleared the way for bright, aggressive tigers with new ideas to sweep into top positions without making the people formerly in these positions bitter.

But is this always smart for the bank?

Some fear that the good people, who can get other jobs, will take early retirement, while the dead wood that knows it can't go elsewhere will hang in there — so the bank's staff quality will be reduced rather than aided by the early retirement policy.

I have seen many instances in which top officers of major banks that offered early retirement soon are working their tails off for some smaller institution. Not only are they having more fun than they have had in years, they are also bringing to the smaller organization both ideas and experience that should rightfully have been used for the benefit of the bank they had served for so long.

For example, one man who had been head of correspondent banking at a major money center organization was pushed aside at age 55. He simply took his talents and valuable contacts to another organization and started generating business as soon as he had learned where the coffee machine was. In this instance, contacts and years of friendship were sacrificed by the major bank for the opportunity to get a younger man in the top correspondent spot. But it appeared to be a bad bargain for the bank, all things considered.

Best of Both Worlds

How can a bank get the best of both worlds? How can it offer to retire people at 55 and still keep the ones who can be truly helpful to the organization?

Some banks say that the chief executive has gone to the people the company wants to keep and indicated to them privately that the bank would not be sorry if they turn down early retirement, even though it looks beneficial at the present time. Other banks have offered consulting positions to those who are truly valuable.

And yet others have simply looked at the benefits of turning over positions and giving new blood a chance, and they decided that if it meant the loss of talent, experience, and contacts, so be it.

But outside observers fear that along with promoting the bright young talent, banks will develop a void as far as those who have seen troubles in the past that match those we may be headed for today.

"You don't remember the Depression," was a cry that young lending officers scoffed at, as the old-timers warned them when real estate investment trust loans, international loans, tanker loans, and the like were placed on the books a decade or so ago. But after the debacles we experienced in these fields, many bankers, looking at their losses, felt like calling up the retirement homes and saying, "Can you let Gridley out on Wednesday afternoons for loan policy meetings?"

It's a tough call: youth and its boundless enthusiasm, or older people with contacts, experience, memories, and justified fears of what might happen.

As usual, the answer has to be compromise, and the banks that try to get rid of all older people in a spring housecleaning may well be the losers.■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

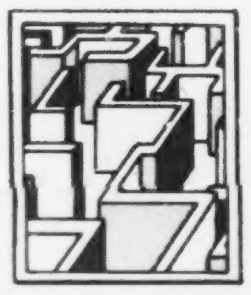
Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for reason of space and clarity.

Remember, we need your views to be a true community newspaper.

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 6.

1. Bogus checks, apparently treated with an undetermined chemical or written with tainted ink, have been used in recent days to bilk banks in the Chicago area out of nearly $50,000. What property of these checks makes them useful for swindling banks?



2. Salomon Brothers Inc. has bumped Bankers Trust New York Corp. from its roster of 45 recommended companies whose earnings and stock prices are expected to increase in the next few quarters. Name the two banking companies that Salomon deemed worthy of including in its list of 45 potential rising stars.

3. Federal regulators are griping to bank executives about the timeliness and accuracy of their call reports. Several thousand banks that missed last quarter's submission deadline for call reports exposed themselves to the current penalty of $100 a day. Stressing the indispensability of this data to effective bank supervision, the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corp. have asked Congress to raise the late-filing penalty to $..... a day.

4. Continuing his inquiry into the causes of the October stock market crash — and the likelihood of a recurrence — commentator Martin Mayer draws some disquieting conclusions from a study of the margin-lending habits of banks. He marshals evidence suggesting that many nonspecialists and arbitragers were regularly able to finance their stock positions by borrowing from banks on "good faith" margins — as low as 20%. Mr. Mayer links this revelation to the fact that total margin credit in early October 1987 was about 2% of the market capitalization of listed shares. How does this recent margin figure compare with market conditions in October 1929?

5. What change in Japanese banking regulations, effective April 1, will be felt by consumer savers in Japan's maruyu system, whose combined deposits are estimated at $2.42 trillion?

6. Now that Sears, Roebuck and Co. — for the first time — has released 1987 volume figures for its Discover all-purpose credit card, it is possible to draw some meaningful comparisons with Visa and MasterCard. The Sears annual report reveals, for example, that usage by the average Discover cardholder nearly doubled from 1986 to 1987. Match these 1987 yearly usage figures with the appropriate credit cards: $273, $840, $909.

7. A survey conducted by the University of Virginia shows that new car loan volume declined 14% last year at member banks of the Consumer Bankers Association. With inventory of both domestic and imported automobiles expected to exceed demand this summer, association members have been warned to be on the lookout for the practice of subvention. Define this term.

— Robert Paul Molay

Commercial Banks Nudge Wall Street

Continued from Page 1

been slow at getting their act together. "It is a surprising thing that banks were not a bigger and a more important factor a long time ago," says Homer Rees, a managing director at Prudential Insurance Company of America, probably the biggest single investor in private placements.

Banks have a natural advantage, Mr. Rees says: "They have a tremendous client base and an army of calling officers."

But for a long time, banks had trouble tapping the market. After the Federal Reserve Board confirmed that commercial banks could act as agents for private placements in 1977, a number of banks set up specialized units and talked about taking on the investment banks. Banks experienced some initial success, but their efforts were inconsistent and their gains limited.

"A lot of banks tried the business and then backed away," says Foster Aborn, president of John Hancock Mutual Life Insurance Co.'s investment and pension sector.

Banks faced a number of obstacles, including a lack of credibility. Most companies viewed private placements as falling within the province of investment banking services and tended to give the assignment to investment banking firms.

But the most serious problems were not the perceptions of outsiders. "We had a harder sell internally than externally," says Michael Neilson, a Manufacturers Hanover Trust Co. senior managing director. Bank calling officers were geared to booking loans. They did not understand private placements, and they did not like turning over their clients to investment bankers, even within their own institution.

Banks also had trouble keeping private placement professionals because they were not willing to offer compensation competitive with Wall Street. "The inability to build and keep good people was the principal reason why some banks have not been able to climb up the league tables any more than they have," says Mr. Powell.

In 1980, Citibank was the top commercial bank on IDD's rankings, finishing No. 10 overall with a 2.5% market share. But the bank dropped to No. 21 with a 0.5% share in 1981, and it did not recover for three years.

"Until about 1984, the bank's private placement business was caught up in the bank's general ebb and flow of seriousness about the investment banking-merchant banking business," says Citibank's Mr. Lawrence.

INVESTMENT BANKING: How Are Banks Doing?

The situation began to change in the mid-1980s. Banks were losing corporate lending business and were under pressure to reduce use of their own capital. So they made a big push in investment banking, and especially in private placements.

"Banks have had a tough time for a number of years," says Mr. Rees. "It is only recently — after they hired experienced people, paid them as if they were investment bankers, motivated them properly, and turned the entire organization into an investment bank — that they have gotten the right focus and people, and culture, and now some are doing very well."

Commercial banks finally began to take advantage of their valuable base among middle-market companies.

"The lines of communication [with companies] are open," says Chemical's Mr. Lavery. The key now "is pushing the investment banking ideas, investment banking judgments, and investment banking expertise through the pipeline."

"In traditional fixed-rate medium- to long-term corporate placements, the commercial banks have made very little headway; the investment banks dominate that," says John D. Miller, an executive vice president at Equitable Capital Management Corp., a subsidiary of Equitable Life Insurance Co. "Where they have made headway is in specialized kinds of transaction, like leveraged leases, mortgage-backeds, off-balance-sheet deals, and structures that are not straightforward private placements."

"It just is kind of natural for us to do deals that are not plain vanilla broadly-distributed deals," says Mr. Lawrence of Citibank. "And, of course, the whole market has been moving that way, so it has kind of been in our favor."

Investors, under pressure to increase their returns, value unusual deals if they are well structured. "A deal source that can produce higher-rate-of-return deals is more highly prized by us than a source of just plain vanilla deals," says the Travelers' Mr. Plover.

Two banks showed substantial gains in 1987 on IDD's list, but neither had provided data in the past. Chemical was No. 14 with $3.4 billion in financing in 1987, up from No. 27 with $137 million the previous year. Security Pacific National Bank, which was not on IDD's list in 1986, handled $1.8 billion in financings to grab the No. 18 spot. The other big gainer was Manufacturers Hanover, which surged to No. 22 with $869 million in financings, from No. 26 with $146 million in 1986.

Not every bank gained. Bank of America continued a three-year slide, dropping to No. 19 with $1.4 billion, from No. 16 with $2 billion in 1986. In

Commercial: Page 15

Demystifying The Numbers

Tallying private placements is difficult because the deals are private, forcing firms like IDD Information Services to rely primarily on banks and brokers for information. It also is becoming increasingly difficult to define a private placement.

Traditionally, private placements were corporate debt securities bought by insurance companies. Securities sold privately now include many unusual asset-backed securities, equities, subordinated debt, debt with registration rights, and lease financings. And buyers are many types of financial institutions.

There are tallies done by firms that are not even close to IDD's numbers. Almost every private placement professional accuses at least some competitor of padding numbers, all the time maintaining that his or her firm's numbers are pristine.

IDD has a list of criteria and analyzes submitted deals to be sure they qualify. For example, the securities must have a maturity of at least one year and be placed with a nonbank third party.

Bridge loans were not included in 1987. Bank loans and participations also were not included, though it is increasingly difficult to distinguish that market from the private placement market.

IDD changed its criteria for 1987, so 1986 figures are not directly comparable.

— David Neustadt

Commercial Banks Capture 26% of Private Placement Market

➧ Continued from Page 14

1985, it was 12th with $2.2 billion. Citibank also dropped, ranking 11th with $5.9 billion, down from seventh place with $6.7 billion in 1986.

The private placement market is quite diverse, and banks are finding different roads to success as illustrated below:

Bankers Trust: "People really don't regard Bankers Trust as a commercial bank anymore," Mr. Powell says explaining the bank's success in private placements.

Mr. Powell claims that Bankers Trust, which finished seventh overall, was robbed of the No. 6 spot. IDD combined the 1987 figures for Shearson Lehman Brothers Inc. with those of E.F. Hutton & Co., even though the two firms did not merge until this year, pushing Shearson ahead of Bankers Trust.

"We have more distribution capability than product to distribute," Mr. Powell says. As one solution to that problem, the bank has developed exclusive partnerships with six very strong, well-positioned regional banks," he says, including "the strongest regional in the South, a very strong one in the Midwest, one in Ohio, and one in New England." Bankers Trust provides the private placement expertise, and the regionals provide the clients. Mr. Powell would like to add three or four more banks, but no more, because he wants to avoid conflicts.

Citibank: If the bank's tally was down at IDD, that is because the financial data firm changed its criteria, according to Mr. Lawrence. "Our revenues were up very substantially," he says.

Mr. Lawrence says the bank's biggest deal in 1987, raising $400 million for an issuer he would not identify, exemplifies the bank's direction: toward value-added, innovative deals. Most securitized deals involve the sale of contractual receivables.

In this case, Mr. Lawrence says, investors for the first time purchased the right to future cash flows from a commercial contract that can be canceled. "They bought the right to future receivables which may or may not be generated," he says. And, unlike many such deals, there is no hard asset as collateral.

Citibank has since done another similar deal, which he also would not identify.

Chemical Bank: "This wasn't building from scratch," says managing director Tracy Lavery of Chemical's strong growth. "We are taking in-place resources and focusing them." The strategy is to target industries, such as real estate, energy, and entertainment, where Chemical is already strong. Then the bank looks for situations that lend themselves to private placements, such as financing for a joint venture, or a subsidiary, or the U.S. branch of a foreign company.

Plain Vanilla Equity Private Placements

	Overall Rank	1987 Amount ($Mil.)	1987 No. Issue
Morgan Stanley	1	$2,802	13
1. Morgan Guaranty	4	1,113	12
2. Bankers Trust	6	722	24
3. Citibank	9	508	11
4. Bank of America	20	66	2

Source: IDD Information Services

Security Pacific: In 1979, Security Pacific hired an executive from Goldman Sachs and set up a private placement unit. If IDD's rankings are any indication, not much happened. In recent years, the Los Angeles bank refused to report its numbers to IDD.

Then, in January 1987, the bank hired two professionals from First Chicago Corp. Security Pacific made them the core of a new private placement unit located in the Windy City, that now employs five and is growing. Security Pacific's $1.8 billion in financings on the 1987 IDD list is partly just better reporting by the bank. But a significant portion is new business, according to vice president Dennis Emmerick, who came from First Chicago.

Bank of America: The numbers that show the San Francisco bank's private placements falling by 38% over the last two years are misleading, according to Gregory Johnson, manager of private placements. The decline is partly explained by the bank getting out of the mortgage-backed business, he says.

Despite IDD's numbers, both volume and — more important — fees are up for his unit, Mr. Johnson says. That claim is supported by the fact that three of four insurance company executives interviewed for this article included Bank of America on their short list of major commercial bank players in private placements.

Manufacturers Hanover: The bank placed a new emphasis on private deals in 1985, which finally paid off last year. "You have to prove to the calling officers that you are value-added," says Michael Neilson, the senior managing director in charge of capital markets. "Once they see you can perform, you are off to the races."

Manufacturers built its private business on its middle-market ties in the New York area. And the seven-member group is working with other areas of the bank, such as acquisition finance and real estate. Manufacturers also did about $500 million in swap-related placements last year, which are not counted by IDD.

Continental Illinois: The Chicago company was the No. 5 commercial bank on IDD's list in 1984, with $747 million in volume, but dropped off the list completely in 1987. Continental Illinois National Bank and Trust Company of Chicago decided not to file its deals because it believes the numbers are inflated, according to Dennis McCrary, the senior director who runs the nine-person private placement unit.

If it had reported, its 1987 volume would have been $775 million, Mr. McCrary says. Assuming IDD accepted that number, Continental would have finished 19th and added about another half of a percentage point to commercial banks' share of the market.

Continental does not shun straightforward deals — it is working on two $100 million-plus transactions — but its strategy is to focus on the high value-added transactions. Mr. McCrary explains: "We could work on a $75 million deal and make $150,000 if the issuer is a high quality triple-B or single-A. Or we could work on one $10 million subordinated deal and make $500,000. There is more work involved to get the deal done, but I think the competition is not as intense."

Next: The investment banking role played by Chemical Bank's United Kingdom leveraged finance subsidiary in the largest management buyout in British history.

Expedited Funds Availability

Comply with confidence

Bank Administration Institute and the Consumer Bankers Association have joined forces to develop the most comprehensive approach to implementing the requirements of the Expedited Funds Availability regulations.

THIS UNIQUE APPROACH OFFERS:

- ■ Intensive one-day workshops scheduled in June to prepare your compliance team to deal effectively with the project—including identifying ways to reduce the risk now associated with transaction accounts
- ■ A video training package with workbooks to simplify the process of assuring consistent employee training
- ■ Model disclosure statements to ease customers' understanding of your policy
- ■ A quick reference flip chart summarizing legal availability schedules to simplify verbal disclosure at the teller line.

Act now! Assure your bank has the best plan for September 1, 1988 compliance by calling 1/800-323-8552 to learn the details. Just for calling, we'll help you get started by sending you a FREE copy of our new detailed guide, Establishing an Effective Check Hold Policy.

Today

Debt forgiveness is one option being considered by the World Bank to help reduce the Third World's commercial borrowings, according to a confidential memo obtained by the *American Banker.* 2

A rash of fraudulent funds transfer attempts has placed the Federal Reserve System on alert. Bogus transactions over the Fed Wire are being attempted as often as twice a week, but so far only one attempt has resulted in a completed funds transfer. 2

As required by law, the Bank Board will consider — but won't promise — a reduction this year in the assessments charged to thrifts for deposit insurance. 2

ICI Mutual Insurance Co. has been created by the Investment Company Institute, the mutual fund industry's trade association. The new company will provide fidelity bond, directors' and officers' liability, and errors and omissions coverage for its 300 members. 14

The weekly listing of financial services stocks features regional industry groups and price indexes. 12

Shearson Lehman Mortgage Corp. is offering adjustable-rate home loans linked to the London interbank offered rate — apparently the second lender to offer Libor-tied mortgages. 19

Executive Changes 15
In the News 3

CORPORATE FINANCE

The accounting profession is battling a growing number of liability suits, as bankers seek to pass on the costs of bad loans to accountants. 3

The Bank of New York is selling roughly $1 billion of its commercial loan portfolio to facilitate the bank's hostile takeover bid for Irving Trust Co. Market analysts speculated that the bank was clearing the asset side of its balance sheet to boost some of its financial ratios. The Fed has expressed concern that the Irving acquisition might take its toll on Bank of New York's balance sheet. 8

Integrating Irving Bank Corp.'s data system with the Bank of New York's system could cost up to $150 million over five years and sharply reduce future earnings, Irving told its shareholders. 15

Chase Manhattan named its first electronics and foreign direct investment executive. Thomas Gallagher, a managing director, will run a new unit that will focus on lending to both the electronics industry and to U.S. subsidiaries of foreign companies. 8

Worth Repeating

The challenge [now] facing the bank is to find a way of providing stronger leadership in the debt workout process.

World Bank president Barber Conable in an internal memo. [Page 2]

An American Banker Special Report

US Banks Grab Share in Global Finance

By JOHN J. DUFFY

Second of a Series

LONDON — When ASDA-MFI, a retailing conglomerate, decided last year to spin off its furniture division in the largest management buyout in British history, one detail of the transaction set City of London tongues wagging: An American institution was leading the financing.

INVESTMENT BANKING: How Are Banks Doing?

For Chemical Bank, which was just setting up its British leveraged finance business, the $1.2 billion deal was a major coup. For the City establishment, it was something of a slap in the face.

"It was a very brave decision in the U.K. marketplace for [ASDA-MFI] to give the mandate to an American bank," said Andrew Jackson, managing director at Chemical Bank International Ltd. "The MBO [management buyout] was four or five times larger than had ever been done before, and Chemical had never led a buyout."

While U.S. banks, such as Citibank and Bankers Trust, had financed buyouts in Britain previously, awarding a newcomer the entire $850 million senior debt portion of the MFI deal was a stunner.

If the deal was a breakthrough for Chemical, it was also representative of a new aggressive attitude that major American banks are taking toward international corporate finance. At a time when profit margins in the Euromarkets have been pared to the bone, banks have discovered that advising and financing international mergers, acquisitions, and buyouts is a way of

COMMENT

The High Price of Mismatch Income

By SANFORD ROSE

What role do asset-liability mismatches play in the determination of bank stock prices? Does the marketplace bid down the stock valuations of mismatching institutions relative to those that are reasonably balanced? And if that is the case, does the marketplace penalize banks which are short funded (liability sensitive) more or less than it penalizes those that are long funded (asset sensitive)?

Put somewhat differently, although investors may be flinty hard on interest-rate bettors, might they not relent a tad when the bets produce handsome profits, as liability-sensitive positions recently have? Does not, in fact, the average investor behave like a coach extending a forgiving hand to a player whose disregard of instructions helped win an important game?

Most bankers and analysts are persuaded that the market is relatively indifferent to the interest-rate-risk posture of banking institutions, about which it is, in any case, painfully ignorant. In other words, the bank stock investor, say many, neither understands nor cares as much

Fed Adopts Rules On Endorsement Of Bank Checks

By BARBARA A. REHM

Washington Bureau

WASHINGTON — The Federal Reserve Board on Monday adopted formal rules on how banks should endorse deposited checks. The measures take effect Sept. 1.

The guidelines are part of a larger effort to speed the processing of bounced checks, a longstanding operational problem for banks.

Separately, the Fed put out for public comment a proposal to ban so-called presentment fees. The checkwriter's bank sometimes charges such fees when the depositor's institution presents an item for collection before 2 p.m.

as he should how rate movements affect bank profits.

Not so, says First Manhattan Consulting Group. Periodically, the New York consulting firm performs a multiple regression analysis to determine what factors explain the variation in market-to-book ratios among banks. Its most recent exercise shows that two variables explain most of the 1987 differences.

Adjusting the Equity

One is, as might be expected, the current return on equity. But since banks substantially reduced their equity endowments last year in order to add disproportionately to loan-loss reserves, return on equity has become a somewhat deceptive number.

Because equity is artificially depressed, return on equity is higher than it otherwise would be, which is hardly a reason to bid up a bank's market value. Hence the marketplace must consider the level of loss reserves as well as the nominal ROE. Taken together, these two factors account for approximately 60% of the variation in 1987 market-to-book ratios.

There are other significant explanatory variables. Among them obviously is the presence of LDC debt. The FMCG regression results indicate that the marketplace marks down bank stock prices by 20% of the book value of LDC debt, an appreciably lower discount than currently obtains in the debt market. (The debt market, less charitable than the stock market, believes that LDC loans are worth only about half of book.)

And then there is the discount for mismatched maturities. It clearly exists, points out Jon Moynihan, a First Manhattan managing vice president. That is, there is a statistically significant (*t* value greater than three) inverse relationship between mismatching behavior and bank stock price performance.

Other things being equal, banks that mismatch maturities have lower market-to-book ratios than those that are balanced. And the greater the mismatch, the bigger the hit to the stock price.

Measuring Mismatch

Now that finding may strain the credulity of some observers. They may allude to the much-publicized difficulty in measuring the mismatch position of banks, especially since reported balance-sheet maturity gaps are often offset by unreported off-balance-sheet activities — e.g., the use of derivatives like swaps, options, and futures.

They may also point out that many banks make substantial profits from mismatched maturities and since the market, as noted, lays considerable stress on return on equity, it is counterintuitive to suggest that all mismatching adversely affects the stock price.

FMCG agrees that it is difficult to measure the true mismatch position of banks that make abundant use of derivatives. But this use is largely confined to the top 20 banking companies. FMCG's findings on the connection between interest-rate risk and stock prices relate essentially to about 180 of the top 200 holding companies — those that are relatively unfamiliar with derivatives and whose mismatch position can therefore be approximated from an analysis of data from published call reports.

The consulting firm estimates the mismatch position of banks from such balance-sheet data, adjusted judiciously to reflect the appropriate duration of such items as demand deposits, and then compares the income or loss generated by this position with what would have been earned if the bank had been fully matched. This yields a measure of mismatch profits per dollar of equity, which is then regressed against the bank's market-to-book multiple.

Leaving aside the income effects, mismatching per se has, as noted, an adverse impact on stock price performance, although, in theory, the investor should reward those institutions, if there are any, whose mismatches are confined to markets where there is a liquidity premium (see this column, Feb. 3, 1988).

Opposing Vectors

However, the income effects are also important. Assuming relative stability in rates, the mere fact that the yield curve slopes upward means that banks whose liabilities are shorter than their assets will earn extra returns, while those whose liabilities are longer than their assets will sustain losses. And the stock market is indeed sensitive to profits.

Thus there are two conflicting vectors. On the one hand, the market apparently penalizes those who bet on rates. On the other hand, the market rewards high returns on equity. So, given the state of the yield curve, it may be thought that banks which are liability sensitive and in recent years have supplemented their ROEs with ample mismatch income would suffer comparatively little if any penalty to their stock price. By contrast, those that are asset sensitive and are therefore losing money should face an aggravated penalty.

Better to Lose Money

But such is not in fact the case. Although banks were penalized for mismatching their maturities in 1987, those that were asset sensitive were not hurt as severely as those that were liability sensitive, despite the fact that the former were losing money while the latter were enhancing their returns.

An asset-sensitive bank with a mismatch loss equal to three percentage points of pretax ROE should, according to the capital-asset pricing model, surrender as much as 15% of its stock valuation. In point of fact, according to these regression results, it suffered only a 1% penalty.

Now consider a liability-sensitive bank that augmented its 1987 pretax ROE by some three percentage points. Such a fillip to ROE, if achieved by methods other than rate betting, should, of course, translate into around a 15% gain in the stock price. But this institution actually experienced a 1987 decline in its stock valuation, and the decline was greater percentagewise than that suffered by its money-losing, asset-sensitive counterpart.

The marketplace is not only serving notice on banks that it does not value earnings realized from interest-rate betting. It is also signaling — at least it was last year — that long funding is less costly than short funding, regardless of the immediate income effects.

Expecting Inflation

Why is this so? The answer, suggests Mr. Moynihan, may reside in the fact that the bank investor is merely following the yield curve. Since the curve is upward sloping, the average investor expects rising interest rates.

He therefore assigns a relatively low discount rate to the earnings of a bank that is asset sensitive and thus positioned to benefit from the expected increase in rates. By the same token, he assigns a relatively high discount factor to the earnings of a bank that is liability sensitive and hence vulnerable to future rate increases.

In other words, the same economic conditions that give rise to the upward sloping yield curve — namely, an expectation of higher inflation — also help account for the discriminatory treatment of liability-sensitive mismatchers. These banks may think they are serving their shareholders by short funding themselves in order to make good current profits.

But the market, which is notoriously oriented to the future, votes otherwise. Based on the information provided by the yield curve, the market forecasts a disappearance of this type of mismatch profit and so exhibits a relative preference for asset-sensitive rather than liability-sensitive institutions.

To repeat — perhaps ad nauseam — all mismatches are bad, at least according to this FMCG analysis. But some are worse than others, regardless of their effect on current income. Mismatches that are based on an implicit forecast of interest rates which contravenes the consensus of the marketplace, as expressed in the prevailing yield curve, will result in heavier stock price losses than those made pursuant to a rate forecast with which the marketplace finds itself in agreement. ■

Regulatory Principles for a Globalized Market

The following is an excerpt from remarks made by David S. Ruder, chairman of the Securities and Exchange Commission, to Keidanren, a leading Japanese economic association, in Tokyo on Feb. 18. The views expressed are those of Mr. Ruder and do not necessarily reflect those of the SEC.

□

I BELIEVE THAT the following regulatory principles should be considered by the markets throughout the world as they seek to adapt to internationalization: 1. Sound standards for disclosure, including mutually agreeable auditing and accounting standards;

2. Promotion of market fairness, including prohibitions against insider trading, market manipulation, and misrepresentations to the marketplace;

3. The widespread availability of quotation and price information;

4. Efficient and compatible national and international clearance and settlement systems;

5. Broker-dealer registration qualifications and conduct requirements designed to promote integrity and honesty in the profession;

6. Improvement of capital adequacy standards in order to provide greater stability and liquidity for national and international markets, and

7. Establishment of international surveillance and enforcement agreements. ■

squeezing significantly more revenue out of their global networks.

"M&A is a terribly attractive product for a commercial bank," said Nicholas G. Walker, vice president for corporate finance at Bank of America International Ltd. "First, it is high profile. You're dealing with the chief executive when the rest of the bank is talking to the assistant treasurer. Second, if limited to an advisory role, it can produce risk-free fee income that is out of all proportion to the time put in."

Bankers say the time is right for a big push into international mergers and acquisitions. Despite the stock market crash, the wave of European acquisitions of U.S. companies spurred by the weak dollar has yet to crest. If anything, weak stock prices may enable cash-rich Europeans to buy even more.

Britain has been at the forefront of the spending spree in the United States. In 1987, U.K. businesses spent $29.2 billion to acquire 314 American companies, more than double the 1986 amount. A brief lull followed the market crash, but deals picked up again in January when Britain's BAT Industries PLC launched a $4.2 billion bid for Farmers Group Inc., a Los Angeles-based insurer.

Plans for a single European market in goods and services by 1992 are prompting corporate restructurings. In Britain the value of management buyouts totaled more than $5 billion in 1987, triple the 1986 total. Bankers say that with the vast number of small private companies that will have to be merged, acquired, or restructured before 1992, the pace of M&A activity on this side of the Atlantic is likely to heat up even more.

But while the market for international mergers and acquisitions is offering rich pickings, bankers say they are not necessarily easy pickings. Local merchant banks, particularly in Britain, have had a virtual stranglehold on domestic merger and acquisition business. Such ties are not easy to break, they say.

Banks face the question of whether handling a hostile bid against a corporate client constitutes a conflict of interest.

"The challenge for an American bank doing European deals is to get yourself hired," said Colin J.G. Keer, managing director at Bankers Trust Co. in London. "It's that simple."

The banks say, however, that they have advantages over a merchant bank or an international investment bank. The large banks, for example, have had a physical presence in overseas money centers for generations. They have huge lending capacities and thus not only propose deals but also bankroll them.

American bankers say they take a more aggressive approach to dealmaking than their European counterparts. That sometimes means lending on the basis of a company's future cash flow and, more often than not, taking an actual equity stake in a restructured company.

In order to close the ASDA-MFI deal, for example, Chemical had to come up with an additional 50 million-pound, two-and-a-half-year, interest-free loan. In exchange for the loan the bank obtained a 5% interest in MFI.

"We have a far greater willingness to actually look at the underlying value of a business than certain other banks," said Chemical's Mr. Jackson. "Traditionally, certainly more so than the U.K. banks."

Among other U.S. banks, Citibank has forged a reputation in Britain as one of the most aggressive international banks in structuring and financing mergers and acquisitions. It recently financed the unsuccessful bid for Dee Corp., Britain's third largest supermarket chain, by Barker & Dobson Group PLC. The bank has played a part in bids ranging from Elders IXL's unsuccessful attempt to take over Allied-Lyons in 1985 to last year's successful bid by WPP Group PLC for J. Walter Thompson Inc., the advertising concern.

"We have a reputation for being relatively sophisticated lenders and for having imagination in our approach toward companies," said Colin Scotland, executive director of Citicorp's investment bank in London.

Citicorp has 17 merger and acquisition professionals in London and M&A units in Amsterdam, Frankfurt, Geneva, Madrid, Milan, and Paris. Although it is the world's top international bank, most of Citicorp's European M&A revenues stem from domestic European work rather than from trans-Atlantic deals with U.S. companies.

"In trans-Atlantic deals our hopes are higher than our achievement thus far," Mr. Scotland said. "In the U.K. and in Europe it's not hopes, it's reality. We're beginning to become a significant force."

In contrast, the international merger and acquisition efforts at Chase Manhattan Bank and Morgan Guaranty Trust Co. are focused on cross-border work — mostly Europeans seeking to buy or sell businesses in the United States. Morgan recently represented F. Hoffmann-La Roche & Co. of Switzerland in its unsuccessful bid for Sterling Drug Inc.

Chase recently represented Sanofi, a French drug company, in its unsuccessful attempt to acquire A.H. Robins Co. Last year, it represented Robert Maxwell's British Printing & Communications Corp. in an acquisition of Webb Printing Products in Minneapolis.

"If a business has some international appeal, a way of tapping the worldwide market is to use an institution like Chase, because we can, via our network, [find] buyers from all over the world," said Christopher Clegg, managing director of Chase Investment Bank Ltd. in London.

'One-Stop Shopping' at Chase

Mr. Clegg, who was recruited from Oppenheimer & Co. to set up Chase's London M&A department in 1986, said the bank offers a "one-stop shopping" service to clients wishing to sell or buy a business in another country.

For example, for a U.S. client seeking to buy a Spanish company, Chase initially might take a "search and approach" assignment. That would then be carried through to the offer, the negotiation of the terms, the signing of the letter of intent, and finally to the signing of the contract. The bank could then put together a financing package, which might include a bridge loan, a Eurobond, or an equity placement in London.

The concept of one-stop shopping is not universally admired, however. Large companies tend to use different advisers for different aspects of a transaction, bankers say. And some banks decline to put their balance sheet at risk in M&A transactions overseas.

Bank of America, for example, takes only pure advisory roles in mergers and acquisitions in Europe. It concentrates largely on Spain, where it has corporate banking offices in Barcelona, Bilbao, Madrid, and Valencia and it specializes in arranging the sale of midsize Spanish companies to major international investors. It arranged five deals in Spain last year, more than any other foreign bank.

The troubling side of the banks' drive into M&A, both domestically and internationally, is that hostile bids and traditional bank relationships often run at cross purposes. Banks are increasingly faced with the question of whether a banking relationship with a corporate client raises a conflict of interest in handling a hostile bid against that client.

"It's the most delicate subject that Citicorp has to address in terms of its corporate client base at the moment," said Mr. Scotland of Citicorp. In Britain, Citicorp has gotten into scrapes with Dee Corp. and Allied-Lyons, both of which claimed the bank abused its relationship with them in financing hostile bids. Citicorp said neither relationship was strong enough to prevent it from taking an independent role.

"The problem is that, in the broadest possible definition of the word, Citicorp has relationships with almost every major company in the world," said Mr. Scotland.

A major advantage of M&A for commercial banks, however, is that it provides a good basis for selling other products and services. Bankers said M&A business can easily generate foreign exchange business, international debt and equity business, and even private banking transactions.

Mr. Walker of Bank of America noted, for example, that the bank recently acted as adviser on the sale of a midsize Dutch company to a French buyer. "We did the advisory role, we lent the money to finance the purchase, we did a foreign exchange contract taking French francs into Dutch guilders, and, finally having transferred the money to the seller, we took it back into Bank of America and put it on deposit for him in our private bank."

Such deals do not happen every day, and in fact tend to be rare, given the increasing sophistication of the M&A market in Europe. When they do happen, however, it tends to make up for all the deals that go awry.

"When you can totally control a transaction like that," Mr. Walker said, "it's like pulling the handle on a slot machine and seeing the money just come gushing out," he said. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our investment banking series meets your information needs. So would you spend a moment to give us some feedback? Today

California is now a major EFT state; ATM network services are ubiquitous, and POS debit systems are running in several retailing chains. 2

First Boston Corp. was still No.1 underwriter of asset-backed securities in the first quarter, as the market's new-issue volume jumped almost threefold from the same period in 1987. Issuance, however, plunged more than 36% from the fourth quarter of last year. 2

Shearson Lehman Hutton Inc. closed a $29 million private placement of securities backed by mortgages on time-share vacation units. The mortgages were sold by Glen Ivy Resorts, a California time-share developer. 2

Exclusive rights to market MasterCard credit cards to fans of the New York Yankees have gone to Marine Midland Bank. 3

Executive Changes 20

Thrift Trigger Dates 7

COMMENT

Bank failures will continue at the same pace through 1988, whether or not one includes banks receiving FDIC assistance, says Irvine H. Sprague. 4

The annual "Statistical Abstract of the United States" spotlights social and economic trends — from the indispensable to the trivial — writes Robert J. Samuelson. 5

TECHNOLOGY

Paperless payments will be easier for banks and corporations to initiate with the personal computer products introduced at the National Automated Clearing House Association annual conference. 8

A miniaturized microfilming machine meets bankers' growing preference for filming checks in their branches. The unit, introduced by Eastman Kodak Co., is called a desktop microfilmer and fits in a 19-by-23-inch area. 8

The Federal Communications Commission intends to drop a proposed minimum access fee for those who use interstate telephone lines for computer communications. The proposed fee would have cost banks nearly $250,000 per year. 9

Arthur Andersen & Co. has introduced a software package to help large banks and businesses write their own application programs. 11

Littlewood, Shain & Co. has joined Info-Mation Systems, a Texas software development firm, to form LSC Payment Systems. 12

Worth Repeating

We're getting lots of money lately, and I think much of it's been from First Republic.

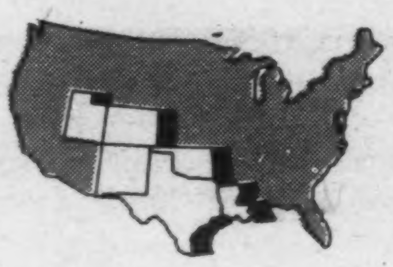
Credit Unions Prosper in Texas Slump

By DAVID LaGESSE
Southwest Bureau

DALLAS — Amid the confusion of the state's bank failures and thrift fraud, credit unions in Texas have calmly gone about the business of making consumer loans — and profits.



The state's 1,000-plus credit unions, in fact, have turned in a "stellar performance" in light of the state's economic problems, according to the nation's chief regulator of credit unions, Roger Jepsen, who will praise the Texas industry in a speech in Houston later this week.

Generally much smaller than banks and thrifts, credit unions usually stick to consumer lending — automobiles, boats, home equity. In Texas, they have avoided the oil and real estate lending that is now sinking the state's banks and thrifts. Credit unions are limited to defined customer bases, such as employees of a certain company, which provide more stable banking relationships.

Last year, the state's 280 thrifts reported losses of more than $6 billion, and its 1,900 banks lost more than $1 billion. State-chartered credit unions in Texas, which number about 400, earned an average return on assets of about 0.7%, according to the Texas Department of Credit Unions.

Perhaps most impressive, the state's

Bankers Cite Edge over Rivals In Competitive Swaps Market

By LISABETH WEINER
Third of a Series

CHICAGO — With outstandings hovering at about $1 trillion, the swap market has come of age.

Corporate and other borrowers regularly seek to take advantage of fluctuating credit rates by exchanging their fixed-rate interest obligations for other loans at floating rates. Only the interest payments are swapped, not the principal.

INVESTMENT BANKING:
How Are Banks Doing?

No longer are swaps an esoteric corporate finance tool that dazzles the uninitiated. In six short years, swaps have developed into one of the largest financial markets around the world.

Swaps have become commonplace, available to almost any company and indispensable to financial institutions competing in today's global arena.

Commercial banks and investment banks compete on equal footing in the swap market. While the competition in swaps is murderous, commercial bankers insist that they have the upper hand.

"U.S. commercial banks dominate in swaps," said Donald Layton, managing director of Manufacturers Hanover Corp. "The Wall Street firms were once neck and neck with the banks, but they have fallen behind."

Swaps provide corporations an efficient way to reduce borrowing costs and manage assets and liabilities. And swaps remain attractive to banks because they provide noninterest income

1988 Will Be Another Banner Year for Bank Failures

By IRVINE H. SPRAGUE

MISMANAGEMENT, fraud, greed, and the economy were the dominant reasons for bank failure in 1987, as always; but it is semantics that dictate the count. The Associated Press, the Federal Deposit Insurance Corp., and the *American Banker* all reported that there were 184 bank failures in 1987, the sixth consecutive year that a new and higher record was established.

But according to my calculations there were 203 failures. Others say the total was 193.

The discrepancy comes because I count as a failure any bank that met all the criteria for closing but was kept open through government assistance. I started this method of tabulating failures as FDIC chairman in 1980 when First Pennsylvania failed but was kept open through a 13(c) essentiality assistance transaction and have continued using this count in speeches and writings since.

Mr. Sprague served as chairman or director of the Federal Deposit Insurance Corp. for more than 11 years. During that time, he handled 374 bank failures, more than anyone else in FDIC history.

> Since Penn Square, the question of when to consider a bank a failure has taken on more significance.

After all, those who managed or directed a bank to failure should not escape the stigma of failure. I might note that those associated with Continental Illinois National Bank and Trust Company of Chicago and other bailouts have expressed great distaste over this reasoning.

However, there is some movement toward accepting my analysis.

After 50 years of reporting only on sales and payoffs of closed banks, the FDIC annual report for 1986 compromised with my theory. The table "Disbursements for Protection of Depositors" listed 145 banks — 40 payoffs, 98 sales, and 7 assistance transactions, or bailouts as some call them. It also restated the table to show assistance transactions for the past six years. On another page, the closed bank table listed 138 failures. Similar reports have been made for 1987.

'De Facto Failure'

Another indicator: *The Washington Post* recently described Continental as a de facto failure and quoted the new chairman, Tom Theobald, as saying that the bank at that time had more bad loans than net worth and was ". . . sunk by insolvency."

The stockholders, I guess, can offer the strongest testimony as they hoard worthless paper that officially will become junk when the final accounting of the Continental bailout comes in September of 1989.

A bank can be book insolvent, its liabilities exceeding the assets, or it can be liquidity insolvent, not having sufficient cash to meet its obligations.

Until the Penn Square episode in 1982, I had never really thought about the insolvency finding. After all, our job at the FDIC was not to close a failed bank but to handle a failure after the institution was closed by the primary supervisor.

Penn Square Bank, Oklahoma City, was insolvent, we were certain, but the Comptroller's examination was still underway when the situation climaxed on the Fourth of July weekend.

We wanted to get our people into the bank quickly on Friday night so they could work the long holiday weekend and be prepared for a payoff or a sale when the holiday was over Tuesday morning. Comptroller of the Currency Tod Conover, a member of our FDIC board, sympathized with our need. But he faced the dilemma of how to find the bank book insolvent before the examination was concluded, even through the final result was certain. There was no liquidity insolvency as long as the Fed kept providing money, as they did.

Bank Act No Help for Conover

Mr. Conover found no solace in the National Bank Act which states only that he shall appoint a receiver whenever the Comptroller "shall become satisfied of the insolvency."

Our talks continued inconclusively Friday and Saturday. Finally, Sunday morning, Paul Volcker asked Don Regan to come down. Mr. Regan as Treasury secretary was Mr. Conover's boss. We sat in Mr. Volcker's tiny office and for an hour Mr. Regan listened to us. Then he stood up, smiled and left, saying: "Well, I'm sure you gentlemen will do the right thing." Mr. Conover was on his own.

Finally, the examination had progressed to the point that there was absolutely no question that the bank was insolvent and late Monday night Mr. Conover ordered it closed. Penn Square was a failure by any criteria.

Since then, the question of when to consider a bank as a failure has taken on more significance with the expanded use of 13(c) authority, which allows the FDIC to assist in keeping the bank open on a finding that it is in "imminent" danger of failing and the cost of such a transaction is estimated to be "substantially" lower than the cost of allowing the bank to technically fail.

Last year there were nine such transactions covering 19 banks — that is how I arrived at the 193 or 203 counts, take your choice: 184 plus 9 or 19.

The 13(c) cases ranged from the $3.1 million Falun State Bank in Kansas to the $1.2 billion BancTexas Group of 11 banks.

Although the banks are kept open in a Section 13(c) transaction and the community and customers keep their bank; the end result is roughly the equivalent of a failure as far as management and the stockholders are concerned.

Capital and Management Provisions

Provisions for new management and capital are required for these making a Section 13 application and, according to the FDIC guidelines, "after the assistance . . . a determination that the financial effect upon shareholders and creditors of the bank, or the bank's holding company, approximate the effect on those parties which would have resulted had the assisted bank failed."

In addition to the completed assistance cases in 1987, there were three that were approved in concept but not consummately yearend.

Those who tabulate the numbers will have a field day on these. One is for a single bank in Louisiana, one covers two failing institutions in Alaska, and the third is for the enormously expensive rescue of First City Bancorporation of Texas Inc. which encompasses 62 separate banks.

In an earlier article I suggested that bank managers who are expansion-minded find comfort in the FDIC safety net of Section 13 transactions, but Bill Seidman, now FDIC chairman, reminds me that the safety net is for the depositors, the customers and the community — not stockholders or management. I agree.

Director and officer liability suits are filed by the FDIC against those responsible whether it be de facto or technical failure, if the circumstances warrant. Continental is a good example. In 1987 there were 39 new lawsuits filed and decision was made not to file in 51 cases. It takes time to investigate a failure so most of these actions relate to prior year failures.

Also, in 1987 there were 39 settlements recorded (the same umber as the new suits filed). Recoveries exceeded $59 million.

How the Other Failures Were Handled

To complete the picture of 1987 we should recount how the other 184 cases were handled, the 184 that were failures no matter how you count.

Eleven of these were payoffs by the FDIC, the bank was closed and the insured customers, up to $100,000 per account, were promptly given their money. In another 40 cases the FDIC transferred the accounts to another ban to act as agent for the payoff.

In these 51 cases the uninsured depositors, those with accounts over $100,000, suffer a probable loss, but the fact is that nearly all of these payoffs were for very small institutions with minimal uninsured deposits. Also, in most of the deposit transfer cases the failed bank was replaced in the community with either a new bank or a branch or a nearby institution. Most of the time a large proportion of the assets were sold to the replacement facility.

This leaves the 133 sales, the traditional purchase and assumption transaction in which an existing bank or a newly created one takes over the failed institution. The community, the customers and the depositors, insured and uninsured alike, are made whole. Stockholders and management lose out.

The new twist in 1987 ws the active pursuit of whole bank transactions which were attempted in 52 cases and successfully completely in 19. In a whole bank transaction the purchaser takes over essentially all of the failed bank assets, reducing the FDIC cash outlay and setting up a situation whereby the bank customers can work out their problems with the new owners, not FDIC liquidators.

The other innovation in 1987 was the use in one instance of new bridge bank authority granted by Congress last year. A bridge bank allows the FDIC to operate the failed institution until another solution can be found.

I guess the reality is that there were one heck of a lot of bank failures in 1987, whether the number was 184 or 203, or something else. I recall now, almost with disbelief, my first year on the FDIC board in 1968 when we struggled with just three failures all year, with combined assets of about $25 million.

A prediction: 1988 will be about the same as 1987. ■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for reasons of space and clarity.

Remember, we need your views to be a true community newspaper.

April 6, 1988, American Banker

Bankers Cite Edge over Competitors in Swap Market

Continued from Page 1

at relatively small risk.

The most common swap, the exchange of floating for fixed interest, is known as a plain-vanilla deal. But swaps can be much more complex if foreign currencies and options are part of the transaction.

Banks make money on swaps through the bid-offer spread. This is the difference between the price a dealer — either an investment banker or a commercial banker — pays to book a swap and the price he must receive at a later date to sell it.

Dealers Aim for 10-Basis-Point Spread

If, for example, a dealer pays a fixed rate of 63 basis points over the five-year Treasury rate to buy a swap, then he will hope to sell it later for 73 basis points over the Treasury note rate to get the 10-basis-point spread that is common in today's market. This bid-offer spread marks what the bank earns on the deal, excluding costs and expenses.

A swap is expressed in terms of notional value, which is roughly equivalent to the principal. A hypothetical swap with a $50 million notional value will earn the dealer $50,000 if the bid-offer spread is 10 basis points.

From the $25 billion of swaps booked in 1982, when the concept originated in the Eurobond market, growth has been phenomenal. Outstandings for interest rate and currency swaps, with maturities of three years or more, are now estimated to exceed $1 trillion, according to Patrick de Saint-Aignan, former chairman of the International Swap Dealers Association and a managing director of Morgan Stanley & Co.

Data from bank call reports show that the 10 largest players in the interest rate swap market had outstandings at the end of 1987 ranging from $18.1 billion to $117.5 billion. Investment banks are not required by the Securities and Exchange Commission to release swap numbers.

Many investment houses consider themselves major factors in the swap market. Only a few continue to act strictly as brokers, arranging swaps but not taking positions in them. Most securities firms operate in the swap market just like commercial banks.

Salomon Brothers Inc. declined to disclose the size of its swap portfolio. "We are a major participant in the market. We are not No. 1, but we are a factor," said Richard F. Leahy, managing director and head of hedging.

Commercial banks maintain that they have an edge in the swap market because of their long history in credit analysis. A bank is able to act as one of the counterparties in a swap transaction. It can afford to hold a deal on its own books for considerable periods, and has the capital base necessary to support a swap portfolio.

"Banks have a tremendous capital capability to take on credit risk," Mr. Layton said. "The securities houses prefer to do a swap when a bond issuance is related."

Commercial bankers also feel that their customers regard them as more secure than investment banks.

"When you have an event like Oct. 19," said Denise Boutross, managing director and head of U.S. dollar swaps for Security Pacific Corp., "people look at it [the markets] very differently. They want to know who is going to be here seven or ten years from now. Banks give a greater sense of security."

The Wall Street Advantage

The Wall Street firms are quick to rebut the commercial banks' claim of dominance. Investment bankers point out that the capital of many of the largest money center swap dealers would be wiped out or severely reduced if they were forced to write down their Third World debt to market price. "Investment banks, on the other hand," said one such banker, "do not have loans to the Third World."

The securities firms have an advantage over the banks in swaps that are tied to publicly issued domestic bonds.

"We can offer an entire package of things, so a swap is usually part of a bond issuance, or we may do something like an asset swap," said Patrick Kelly, a Salomon Brothers director and manager for swap products.

Mr. Kelly estimates that 30% to 40% of the swaps booked by investment banks over the past five years have been tied to bond issues. Investment bankers feel they have an edge because the Glass-Steagall Act prohibits commercial banks from underwriting domestic securities.

With decreased activity in the fixed-income markets, however, about 15% to 25% of the swaps being booked are now linked to bonds, Mr. Kelly said. Salomon has significant swap business related to bonds, he said, declining to provide details.

Corporate treasurers who are active users of interest rate protection see better deals coming from the commercial banks than from the investment banks.

"Commercial banks are much better insulated against rate volatility," said the treasurer of one major U.S. corporation, who requested anonymity. "They are happy just as long as they get the spread they want.

"When absolute interest rates go up, commercial banks can pass along the increase in their cost of funds to their customers. Investment banks are more like brokers. They are willing to tie up their capital only for a short period of time," Mr. Kelly said.

The securities firms say they serve thrifts, insurance companies, and large corporations. Commercial bankers book deals for these groups, but they also arrange swaps for middle-market corporations and customers involved in leveraged buyouts.

Competition has contributed to the stability and liquidity of the swap market. These attributes proved crucial during the October crisis.

"We did see the bid-ask spread widen significantly immediately after the crash," said Renee Ross, a swap trader at Bank of Boston . "But a month later, things were back to normal, which is a good indication of the stability and liquidity of the market."

Household Names Dominate Market

The dominant players are the money center banks and such investment banks as Salomon, Merrill Lynch & Co., and Morgan Stanley & Co. Only a handful of superregional banks — including Marine Midland Bank, Bank of Boston, and NCNB in Charlotte, N.C. — are recognized as substantially active in swaps. The only player new to swaps, industry observers said, is American International Group Inc., an insurance company based in New York.

In 1983, the bid-offer spread on a five-year plain-vanilla deal was 22 basis points. By 1984, it had narrowed to 12 basis points, and a year later it came in at 10 basis points. Since 1985, the spread has held steady.

"It's still a profitable business, even though it's not the bonanza it was at first," said David Gelber, managing director at Chemical Bank in London. "I think we have stabilized our profit margin, and in 1987 those margins held."

As the bid-offer spread has narrowed over the years, industry pundits have questioned whether commercial banks are adequately compensated for their credit exposure. Since swaps are off-balance-sheet items, regulators have little information about these instruments other than gross numbers on notional values. Data on portfolio diversification and pricing remain top secret.

In a five-part series, the *American Banker* looks at banks' progress in investment banking. A report on private placements appeared on Monday and a review of global finance ran Tuesday. The series continues Thursday with a look at how banks are faring as advisers in domestic mergers and acquisitions.

Regulators are becoming increasingly concerned about what would happen in case of a massive swap failure. Commercial bankers balk at any suggestion that they are not pricing adequately for risk.

The exposure a bank takes on when it books a swap is not directly related to the notional value of the swap itself. If one of the counterparties fails, the amount at risk is only what it would cost to replace that swap in the current market, bankers said.

Swap Defaults Are Infrequent

Swap defaults have been rare and losses have been manageable. Bankers feel that, as the market has matured, so has their understanding of how to price for the interest rate and credit risk exposure in a swap.

"Over the last three years, we have a much more refined knowledge of what our exposures are," said Joe Bauman, vice president and head of Chemical Bank's New York swap desk.

Sometime soon, regulators are expected to impose risk-based capital standards requiring bankers to hold capital against all types of assets, including swap portfolios, based on risk. The result, some bankers suggested, will be that banks will have to charge higher fees for swaps to cover the cost of holding the capital. "In fact," said Ms. Boutross of Security Pacific, "we're already seeing widening of bid-offer spreads due to [anticipated] capital adequacy standards."

Investment houses, not subject to risk-based capital requirements, could offer lower prices than the commercial banks on swap deals. Yet commercial bankers don't foresee this type of price war.

"That would be shortsighted for the investment banks," Mr. Bauman said. "The SEC [Securities and Exchange Commission] will follow suit with similar kinds of guidelines. Investment banks that undercut on prices now will find themselves in a lamentable position when the restrictions are imposed, because we know from experience that the regulators won't grandfather in previous exposures."

Customizing Swaps Adds Value

Bankers have learned how to customize the simple swap product to meet the customer's specific needs. This "added value," is what allows bankers to fatten spreads on swaps and pump up profits.

NCNB has identified its niche doing smaller deals for smaller or middle-market companies.

"Our focus is in the Southeast. We have done business with customers within our geographic area," said Mark Whalen, senior vice president of NCNB.

The average swap NCNB has on its books is about $10 million, although it has done swaps for as little as $850,000. While most other banks arrange swaps that are based on the London interbank offered rate, NCNB will do swaps based on the prime lending rate.

"We can get a little wider spread on these," Mr. Whalen said. "Generally there's a little more profitability in these because there's less liquidity."

Interest rate caps and collars provide another way for banks to bring more value to their corporate customers, and thus higher fees.

Caps give the buyer essentially the same kind of protection as swaps against rising interest rates, but do not limit the benefits that may be derived from declining interest rates. The corporation purchases a cap, or an interest rate ceiling, usually by paying an up-front fee or premium. In turn, the corporation receives a guarantee that if interest rates rise above the stipulated ceiling, the bank will pay the difference on the outstanding balances.

While no formal numbers have been compiled on the size of the market, commercial bankers estimate that about $70 billion in caps were written in 1986. In 1987, that number grew to $100 billion.

Like swaps, caps can be written for any term, but a preponderance of caps are for two to three years.

Although the concept of a cap is straightforward, this interest rate protection tool has proved to be complicated for providers to price and to hedge. Consequently, only a handful of banks — whether commercial or investment — are active in the cap market. Those banks that run the largest cap portfolios include Manufacturers Hanover, Citibank, Salomon, Bankers Trust, Chemical Bank, Morgan Guaranty, and Drexel Burnham Lambert, industry observers said.

"Caps are just more complex [than swaps] to handle," said Mr. Layton of Manufacturers Hanover. "You need a research and development group, technology. And because it's more complex, it's more expensive."

If a bank sells an 8% cap to a corporate customer, than the bank must make sure that it has a source of protection in case rates rise above that level. The bank needs a stream of payments to offset its obligation to its customer. This is achieved either by putting on a hedge, frequently done by using options on Eurodollar futures, or by buying a cap from someone else. This trading of caps, in fact, constitutes one of the largest segments of the market.

Unlike the swap market, which is largely dominated by financial institutions such as thrifts and banks, caps are tailor-made for corporations, especially those that have project financing outstanding or leveraged buyouts, where there is considerable floating-rate debt. But bankers have found that a lot of corporate customers have a natural resistance to paying premiums.

"Corporations hate paying premiums," Mr. Layton said. "So we arrange things like a zero-cost collar, where we sell the company a cap and it sells us a floor." The company is willing to give up the benefit if rates decline.

A collar consists of a ceiling and a floor of interest rates. In a collar the bank agrees to pay the difference if interest rates rise above a certain rate, but the corporation must agree to pay the difference to the bank if rates fall below the agreed-upon floor.

"In the U.S. we'll continue to build a more complex structure," said Mr. Layton. "We'll be able to offer risk management on a broader scale and suit a broader array of American companies. At the same time, we'll be impelled by risk-based capital to find mechanisms to reduce the credit risk intensity of the products we sell," he said.

"In the old days," Mr. Layton added, "customers had to fit their needs to whatever products were available. Risk management means doing whatever we can to find the products to meet the customer's needs." ■

Legal, Cultural Bans Retard Progress

By JED HOROWITZ

Fourth of a Series

NEW YORK — Mergers and acquisitions is a matchmaking business, and banks should excel at it.

They've got long lists of traditional clients that are ripe for change and willing to pay for advice on how to expand, restructure, or defend themselves from acquisitive hands.

Yet, until recently, few banks have managed to convert their traditional lending relationships into lucrative advisory mandates.

In 1987, commercial banks captured a slight 7.4% of the market as M&A advisers — the same percentage as in 1986. Only Bankers Trust Co. edged into the ranks of the top 15 advisers measured by dollar amount of deals completed, according to IDD Information Services, a financial data collection company.

"I don't see them that much," said Lawrence N. Lavine, a senior vice president and merger specialist at Donaldson, Lufkin & Jenrette Inc. "Morgan and Bankers Trust have done a good job coming from nowhere. But they're still not a major factor in the business."

"They've got some very good contacts through their commercial banking relationships," agrees Les J. Lieberman, a first vice president who works on thrift and bank deals at Drexel Burnham Lambert Inc. "But aside from a couple of high-profile deals, they haven't convinced their accounts that they have the ability to pro-

Campeau's Federated Purchase Is Money in Bank for Backers

By DAVID NEUSTADT

NEW YORK — Campeau Corp.'s $6.6 billion takeover of Federated Department Stores will provide a bonanza for commercial banks and investment banks.

Commercial banks in the syndicate providing Campeau's loan will share at least $106 million in fees on the $3.4 billion facility for the leveraged buyout, according to data provided by Loan Pricing Corp. The investment banks will divide at least $140 million, according to a report in *The New York Times.* About $60 million of that will go to Campeau's advisers, First Boston Corp. and Wasserstein, Perella & Co.

The loan was increased during the course of the 10-week takeover battle as the bidding war continued. Final details of the pricing of the loan, provided by a syndicate of banks led by Citibank and Sumitomo Bank Ltd., are due out today. But the pricing is expected to be similar to that of earlier agreements between the banks and Campeau.

Incentives: Different Strokes for Different Folks

By JACK W. WHITTLE

WITH a people-oriented business such as banking, success is achieved by determining what your customers and your employees want, and then designing programs to fulfill both sets of needs.

For the past 17 years, we have applied every known research method to learn what motivates an employee to exceed the set standards of performance for his or her position. As we enter a time in which more and more of our profits must come from fee income, we bankers must keep our staff motivated to produce this sorely needed revenue.

Over the past 20 years, two myths have pervaded the banking industry, and seem to still persist. The first is that national averages and research findings are meaningful. For example, someone studies a national sample of bank employees to determine how many are motivated by money, how many by noncash perquisites, how many by working environment, and so on. Then, a community bank applies these national findings because it assumes that local employees fit the national profile. This assumption is ludicrous. Relying on national findings frequently leads the community bank astray.

Whittle Says:

Employees appreciate the opportunity to select the kind of reward that they feel is most meaningful for the tasks assigned.

Looking Beyond the Averages

Whenever we conduct research in a local area and compare our findings with national survey results reported by other organizations, there is seldom a similarity. What good is it to say that the national high temperature average for the United states was 54.7 degrees last year and the national low average temperature was 52 degrees?

There may be academicians somewhere who find national averages useful, but generally they are meaningless. What relevance do these numbers have for our friends in Minnesota or in Arizona? Or, consider the farmers. They want to know when the last freeze will occur in their area. Farmers realize that national weather phenomena mean little to them. This is a regional matter, and in some cases, even narrows down to town and city levels. So it goes with bank research, too.

In some areas, bank customers enjoy using ATMs and drive-ups, in other areas they don't. IRAs may be very popular in one locale, but not in another. Therefore, national reports about ATM or IRA usage and pricing may not apply to your area.

It is the same with compensation programs for employees. Sometimes we find vast differences in staff preferences within a 20-mile geographic radius. Each bank has to assess the wants of its own employees.

This brings me to the second all-pervasive myth. Bankers attend conferences, listen to other bankers expound their great truths, and run up to the podium to request copies of the speech. They want to put the speaker's mythical panacea into place at their own bank. I call this practice justified plagiarism. In most cases it does not work. What applies to one market may not apply to another. Our time would be much better spent if we discussed the methods we could use to discover what our customers and our employees want.

Money Gets Results

Let me give you some ideas on incentive compensation for employees. National studies have suggested that money is not everything. Yet we have discovered in market after market that money is almost everything, particularly with customer contact people.

Employees agree that a bank has the right to measure how well customer service is being provided. They tend to agree strongly that excellent customer service — above and beyond what the bank requires — should be rewarded.

As part of each bank's survey, we develop indexes for sales and service consciousness, which help us determine the likelihood that a certain bank's staff will embrace a disciplined approach to service.

One thing that we have discovered lately is that rewarding employees with points that are accumulated toward a prize is diminishing rapidly in importance. A better approach is to offer a range of incentives, much like the selection of food choices available at a cafeteria or smorgasbord. Employees appreciate the opportunity to select the kind of reward that they feel is most meaningful for the tasks assigned. Following are some comments about each of several possible incentive options.

- Money. This ranks high as a reward. It may take the form of competitive wages, bonuses, commissions, or draw accounts. Space restrictions do not allow a detailed definition of each form. However, I predict that most bankers will be authorities on cash-based incentive programs before the end of the century.
- Employee benefits. Employees very much appreciate a full benefit package. This includes life, health, major medical, dental, and auto insurance, along with a pension, legal services, free checking, paid vacations, paid holidays, and education reimbursements.
- Status symbols. Though somewhat appealing in certain areas, banks have generally overrated the importance of status symbols. I refer specifically to office size and view, job title, parking space, company car, membership fees, serving on special task forces, inclusion in special meetings, and a private secretary.
- Opportunities for growth and visibility. Rewards here consist of being assigned to represent the bank at a public meeting, being chosen as a spokesperson for the bank, and pursuing training opportunities, both in-house programs and professional or academic courses. The young go-getters especially like these benefits. Excellent career advancement opportunities can be the "carrot" for motivating people to sell more and to provide better service.
- Power and authority. Once again, banks have overused the practice of saying: "If you do well, we will make you an officer." This is probably the biggest stumbling block in creating harmony among your troops. Banks that traditionally have emphasized officer/nonofficer designations have a difficult time with building organizational pride and esprit de corps among their customer contact people.

Many banks are eliminating these titles and are taking steps not to split benefits (e.g., places of eating and length of vacation) along officer/nonofficer lines.

- Flex time. Another great motivator is flexibility in job assignments, working hours, job sharing, and rotating assignments. This appeals most to those who achieve success in showing others how to deliver excellent service.

I am happy to observe that banks are beginning to understand that there are different creative ways to reward outstanding service. Med Center Bank in Houston has a committee for selecting an outstanding employee of the month. A picture of the employee appears in the bank lobby and in the bank newsletter. The clincher is that the 12 employees who are selected over the year get together for a Christmas picture at a florist shop in late November, and this photo is used for the bank's Christmas card. This clever idea is very effective.

Some banks give their high sales performers the best parking spots — typically those that would be reserved for

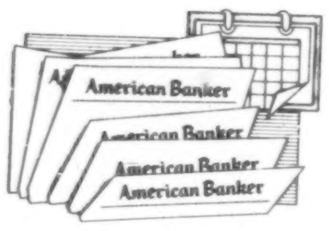
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- The First National Bank of Palm Beach, Palm Beach, Fla., converted a window that once faced its parking lot into an "outdoor banking" counter. The bank created its "Auto Teller" by cutting the window in half, running a counter across it, and building a small section to swing open as a teller's window.
- Treasury Secretary John W. Snyder denied reports by a columnist that he would resign.

20 Years Ago

- Banks in several areas of the country were closed April 9 in respect for the memory of Martin Luther King Jr., who was assassinated on April 4.
- The nation's only female state bank supervisor said banks would be wise to consider women for more executive posts. "Fear, tradition, and outmoded prejudices are preventing banks from taking advantage of their most available manpower resource: womanpower," said Freyda P. Koplow, Massachusetts commissioner of banks. She said barriers against female business executives would inevitably fall. "The question is," she said, "can the banks afford to be the last holdouts?"

10 Years Ago

- The Federal Reserve Board proposed a regulation to prohibit bank holding companies from selling insurance to themselves and to nonbank subsidiaries.
- Fed Governor Philip E. Coldwell said demands that the Fed charge for its services and reduce its involvement in the nation's payments system were a "devious" attempt by large correspondent banks to enhance their dominant position in the banking industry. Mr. Coldwell said he questioned the motives of many of the nation's largest banks, which were arguing that unbundling Fed prices would allow the private sector to compete equitably with the Fed to provide automated clearing house services, check clearing, and other correspondent banking services.
- A shareholder resolution calling for an end to loans to the government of South Africa was defeated at the annual stockholders meeting of the First National Bank of Boston.

5 Years Ago

- The First National Bank of Chicago said it would stop handling the South African Krugerrand gold coin. A bank spokesman said the decision was purely commercial and had nothing to do with a campaign against its sale by the Dominican Fathers and Clergy and Laity Concerned — two religious groups opposed to any link with South Africa's apartheid policies. Both groups had objected to Krugerrand sales and had protested at the bank's annual meeting for the past several years.

1 Year Ago

- Fourteen anti-apartheid protesters were arrested for blocking Citibank headquarters in New York with a makeshift shanty. The demonstrators, members of the American Committee on Africa, demanded that Citibank close its two branches in South Africa.
- The House Banking Committee approved a bill to require next-day access to funds from most local checks, and access within four days to funds from nonlocal checks. The bill also required banks and thrifts to begin calculating interest on checks deposited into interest-bearing accounts on the day of deposit.
- The Treasury Department announced tougher transaction-reporting requirements for financial institutions as part of the government's crackdown on money laundering.
- Losses from bank fraud and embezzlement in 1986 topped the $1 billion mark for the first time, according to statistics from the Federal Bureau of Investigation. Fraud perpetrated by bank officers and employees, however, declined as a percentage of total bank frauds.

Art of Dealmaking Is Not in Average Bank's Curriculum

➞ Continued from Page 1

vide M&A services."

One reason banks have moved sluggishly into mergers is a corporate culture that until recently had been unwilling to reward nimble, deal-oriented managers. Banks have also come to the belated realization that traditional profits from bankrolling corporate America are rapidly fading.

Banks have suffered as well from legal prohibitions against underwriting and dealing in securities, activities that are fundamental to developing many merger strategies.

"M&A often requires a judgment of equity markets and of market players' reactions to strategic steps," says Tracy Lavery, a managing director in charge of private placements and syndication at Chemical Bank. "You can have smart individuals in your mergers group, but if they don't have access to national-class or world-class expertise in various kinds of trading markets, it is somewhat tougher to give the same level of advice as we do in other areas."

Despite the handicaps, a handful of larger banks are aggressively pursuing merger assigments — Bankers Trust, Morgan Guaranty Trust Co., and Citibank are mentioned most frequently by competitors — and a number of smaller banks are backing into the business.

Moreover, they are doing so as corporate marriages — shotgun or otherwise — continue to thrive. The pace of mergers and acquisitions remains strong, propelled by low stock prices from last October's stock market crash, a weak U.S. dollar, and foreigners' huge appetite for U.S. investments. Big commercial banks with strong international contacts should be positioned well for this activity.

The chief rap against banks has been their inability or unwillingness to pay the salaries that will attract top dealmakers.

"You're going to have the large money center banks continue to chip away at some of the bigger deals and take that from the major investment banking houses," said Eugene Kotlarchuk, group head of corporate finance and M&A at Marine Midland Bank.

"Then you'll have some of the strong regional banks with corporate finance groups go after the middle-market types of deals that the bigger houses don't want. When you start getting into the smaller banks, you would have a rough time being profitable because of the cost of getting professionals on board."

Reaching for the Big Prize

Profits, of course, are the brass ring. Advisers are paid a percentage of the size of the deal. Commercial banks, however, have not as a ruleparticipated in the megabuck deals that bring in the high fees.

"As a general matter, banks are much more active in the friendly divestiture end of the scale, which is the low end of the market in transaction size," said Edward S. Annunziato, a director in charge of banking industry mergers at Merrill Lynch Capital Markets.

The biggest deal last year for First National Bank of Chicago was its role as adviser to Day International, which was sold for $350 million, according to Andrew Robertson, a managing director at the bank. The Dayton, Ohio, rubber and plastics manufacturer was bought by Cleveland manufacturer M.A. Hanna Co. Even on that deal, First Chicago shared some of the fees with Salomon Brothers, which wrote a fairness opinion for Day.

Mr. Robertson said First Chicago closed 18 deals last year. "Most of what we work on are strategic acquisitions and divestitures — medium-sized transactions between $20 million and $300 million — for Fortune 1,000 companies."

Security Pacific National Bank reaps between 1.5% and 2% on a typical $20 million deal, says Gary Byrd, who was recently appointed to revive a moribund M&A group at the bank. But many investment banks would sneer at deals of the size Mr. Byrd described.

Bankers Trust's mergers and acquisitions group advised on $6.1 billion of deals in 1987 — 13th among all advisers but not within sneezing distance of the $63 billion of transactions shepherded by Goldman, Sachs & Co. Nevertheless, the group was profitable after three difficult starting years, said David E. Dougherty, managing director and head of the group.

Mr. Dougherty also disputes claims that commercial banks are unable to nurture investment bankers. "I never made a loan," he boasts, "and therefore I have always viewed myself as an investment banker."

"The barriers to entry in M&A are as great as in any area you can think of," Mr. Dougherty says. "But we are now at the point where the perception issue — the view that we can or cannot do the deal — is the most important thing."

It's Hard to Attract Dealmakers

The chief rap against banks has been their inability or unwillingness to pay the salaries that will attract top dealmakers. "To really be a major player in the business, you have to have the top talent," Mr. Lieberman says. "You don't see a lot of people moving from the top spots in the most prestigious M&A departments to the banks."

And without high-powered dealmakers, banks don't see the deal flow that is needed to train homegrown talent, adds Mr. Annunziato.

Commercial bankers, though, insist the culture is changing. "We couldn't attract the talent we have and keep it if we were not competitive on salaries and bonuses," Mr. Dougherty claims. About 90% of the senior professionals in Bankers Trust's M&A group were hired from outside the bank, he says.

Banks appear to be taking two approaches to the business. The powerhouses are throwing big bucks at building staff and chasing the billion-dollar deals. The next tier of banks are more modestly pursuing pettier prizes, of-

AMERICAN BANKER CAN BE READ DAILY VIA ONLINE SERVICES

Get early morning access to today's American Banker news stories, commentaries and tables through several electronic services. Most services update the database by 12:01 a.m. on the day of publication. Included in the electronic version are complete speeches presented by industry luminaries, banking regulations, and other documents not published in the paper.

Two electronic versions of American Banker are available:

AMERICAN BANKER NEWS — Easy-to-use, containing the major stories and columns appearing in today's paper; available through DIALOG Information Services (800-334-2564) as file BANKNEWS.

AMERICAN BANKER FULL TEXT — The complete content of every day's paper back to 1981; updated daily. Available through Data-Star (215-687-6777); DIALOG Information Services (800-334-2564); Finsbury Data Services (212-493-7128); NewsNet (800-345-1301); and NEXIS (800-227-4908).

Selected stories may be indexed and summarized in FINIS, a database produced by the Bank Marketing Association (800-433-9013).

For further information on accessing American Banker on line, please call DATABASE SERVICES at (212) 943-6303.

An American Banker Special Report

Domestic M&A Business Still Eludes the Banks

In a five-part series, the *American Banker* looks at the progress commercial banks have made in investment banking. Following reports on private placements, global corporate finance, and interest rate swaps, the series concludes Friday with a review of legally permissible underwriting and advising activities in the bond market.

➻ Continued from Page 22

fering their middle-market customers valuations, fairness opinions, and general corporate finance advice.

"There's been a lot more smoke than fire with regional banks in M&A," says Felice Gelman, a senior analyst who follows regionals for Dillon, Read & Co. "It's a function of pursuing your own client base, and banks with strong commercial banking relationships have been somewhat successful. But the main area of success has been with smaller, owner-operated companies."

The billion-dollar deals, of course, grab the headlines. Last year, Bankers Trust completed two of them — a $2.1 billion sale of several hundred unprofitable Hospital Corporation of America units to HealthTrust Inc., an Employee Stock Ownership Plan, and Goodman Fielder Ltd.'s $1.5 billion takeover of Wattie Industries Ltd. Bankers Trust also represented Yasuda Mutual Life Insurance Co. on its $305 million investment in PaineWebber Group Inc. — a deal in which J.P. Morgan & Co. represented the brokerage firm.

Morgan Takes Center Stage

This year, it's been Morgan's turn to shine — though not without controversy. Morgan came in for some heavy hissing when it surfaced as adviser to F. Hoffmann-La Roche & Co. on the Swiss drug giant's unsuccessful $4.2 billion bid for Sterling Drug Inc. The chairman of Sterling publicly rebuked Morgan chairman Lewis T. Preston for the bank's "unethical conduct in aiding and abetting a surprise raid on one of its longtime clients."

Most bankers, however, lauded Morgan — which also has been recruited by Irving Bank Corp. to act as a special adviser in fending off Bank of New York Co.'s hostile overtures. "Morgan has catapulted banks into the front ranks of M&A on that deal," said Security Pacific's Mr. Byrd. "There was a problem with Sterling, but net-net it gave banks credibility in their ability to act as more than just a lender."

Morgan officials were characteristically taciturn about the deal, but one source close to the M&A department said the bank knew what it was doing.

"I think the Hoffmann-Sterling bid was a very calculated thing for us," he said. And Morgan, he pointed out, is not backing away from other deals that could antagonize old banking relationships.

It is now advising SmithKline Beckman Corp. on a successful $400 million bid for International Clinical Laboratories Inc. — an offer that was made despite a definitive agreement by Corning Glass Works to buy the company. Corning not only was a Morgan customer, but had named Morgan as depositary bank on its tender offer. Corning also reported that Morgan was increasing its credit line in order to complete the deal.

Bankers Trust has not completed any hostile deals since it began a mergers business in earnest in 1985, but it won't "rule them out categorically," Mr. Dougherty says. "We have worked with clients who have contemplated less than friendly actions, but for various and sundry reasons they did not reach a ripened stage." On the other hand, he said, the bank has some general guidelines on protecting a client's interest, and "on numerous occasions" has rejected deals.

Why jeopardize an old lending relationship for a transitory advisory fee? Morgan is reaping $2 million on the SmithKline deal, and would have captured $8 million if the Hoffmann bid had succeeded. (It kept a $1 million up-front fee from the Swiss firm.) Even these numbers, however, have drawn criticism from some investment bankers who accuse banks of underpricing their advisory services and "buying" deals.

> Most banks are going after smaller clients that most of Wall Street does not know or care to know.

Sour grapes, reply the commercial bankers.

"We have not taken any leadership in price cutting, and fees are never the determining consideration," says Mr. Dougherty. "You've got to have a better idea, a better product, and better service to get business in mergers and acquisitions."

Security Pacific's Mr. Byrd says that the underpricing charge may be true, but he adds that the pricing will even out. "I expect you'll see some of the old-line investment banks downtier, while we uptier a bit," he says.

Going After Small Fry

Meanwhile, most banks building an M&A business are going after smaller clients that most of Wall Street does not know or care to know. A recent investment banking group newsletter from Manufacturers Hanover Trust Co., for example, says that its 15-person M&A department is offering advice "on smaller transactions that would otherwise get minor attention from the giant dealers." Manufacturers Hanover, whose numbers were not included in the IDD statistical table accompanying this article, says it acted as sole adviser in 1987 on six deals worth $450 million.

In their own ways — despite the occasional conflicts of interest — both big and small banks realize that their traditional relationships are the source of their biggest M&A business. Bank M&A departments tend to rely heavily on their commercial lending colleagues.

"About two-thirds of our deals get started with tips from relationship bankers," says First Chicago's Mr. Robertson. "They get rewarded at yearend."

At Security Pacific, the bank's account officers have introduced all seven mandates that the M&A department is now working on. The account executives' departments, in turn, will be allocated a hefty 50% of the advisory fees, Mr. Byrd said.

Most bankers think that split is too generous, but agree with the concept.

"Those intermediaries that are closest to their customers are the ones that will do well," asserts Mr. Kotlarchuk. Marine Midland has established a "boot camp" in which lending officers are exposed for two weeks to the banks' full range of corporate finance activities. He said Marine completed a handful of deals in 1987, but now has more than half a dozen mandates.

Even the larger banks know that their bread and butter is in their traditional relationships and their strong capital. "We offer what Wall Street can't — broader international relationships, for the most part, and a certainty in financing" says Mr. Dougherty. "About 50% of the business we're doing is initiated by the people in the M&A department, but the other 50% is based upon some other relationship within the BT community."

Cross-Border Deals Loom Large

The international element is a big one for the banks. About 40% of Bankers Trust's deals were cross-border in 1987. Citibank and Morgan also have a high proportion of international clients on their M&A rosters.

"Cross-border deals will dominate the '88 activity," says Security Pacific's Mr. Byrd. Although the bulk of the banks' solicitations are being made on its California turf, "we are cultivating Britain, Japan, Canada, and Australia for the sellers that we represent," he says.

Banks also are strong leveraged-buyout lenders and they have parlayed this relationship into M&A work. Bankers Trust recently was named adviser to a senior management group that is attempting to purchase J.P. Stevens & Co. Bankers and Chemical Bank also have agreed to provide $420 million of financing for the merger.

The relationship becomes tricky, however, when the same bank acts as both lender and corporate adviser. Banks cannot legally commit a loan on the condition that they be hired as adviser. But there is a clear link between lending and advising. Citibank, for example, last year moved its merger and acquisition group from its investment banking sector to its institutional bank.

It is sometimes difficult to draw a line between leveraged-buyout transactions — which banks fund and advise — and merger advice. However, the accompanying table reflects only deals in which banks acted as sole M&A adviser.

With all the problems, bankers are relatively optimistic about the future. "The corporate finance and M&A business can be and is profitable at many banks," says Marine Midland's Mr. Kotlarchuk. "The caution is that if every single bank opened up corporate finance groups to do M&A, then there would not be enough business to be profitable." ■

Aspen Banking is Far From Business as Usual

➻ Continued from Back Page

$22,000 for a head teller. Consequently, Central Bank maintains nine apartments in an adjacent building, renting them to employees for one-third below current market rates.

Mona Kochaver, assistant secretary for Aspen Savings and Loan Association, lives about two miles from the center of town in employee housing, designated as such by the local government. Rent increases and resale prices on the apartments and houses are regulated, and the intervention is badly needed, Ms. Kochaver says.

"You'll see perhaps 80 openings for tellers listed in the paper," she says, "and maybe 10 adequately priced housing units listed."

But for skiers, there is no better place to work. Aspen Savings, like many businesses, gives employees ski lift tickets as perks.

"If it wasn't for the skiing, I wouldn't be here," says George Hart, vice president of commercial lending at the Bank of Aspen.

He bemoans the long hours, pressure, and lack of parking spaces that are part of life in Aspen between November and April. "But at home," he says, "I walk out my door into one of the greatest vacation towns in the world." ■

COMMENT

It is unfair, even dangerous, to have deposit insurance and regulatory systems that make banks too big to fail, writes Karen D. Shaw. ____4

THRIFTS & MORTGAGES

Savings and loans have attracted $10 billion in equity capital since 1975 by converting from mutual to stock ownership, according to the Bank Board, which administers the increasingly popular conversion program. New investment generated by the conversions represents 20% of the industry's $51.6 billion in regulatory capital. ____5

Bank Board member Lawrence White found himself mired in controversy after suggesting a risk-based premium as the solution to the cost and inequitable rates of the thrift industry's deposit insurance. ____5

Thrift managers should carefully consider the options involved in making loans versus buying loans in order to maximize income. ____6

Collective Federal Savings Bank, Egg Harbor City, N.J., has agreed to buy Glen Ridge Savings and Loan Association, Glen Ridge, N.J. ____6

Worth Repeating

I don't think it's a completely strange idea to give away some of our inventory. A dollar is not worth what it used to be, anyway.

Richard Rieser, president of First Oak Brook Bancshares, on gluing one dollar bills to the company's annual reports. [Page 3]

Barclays Says It Won't Ride to Irving's Rescue

By GORDON MATTHEWS
and JOHN J. DUFFY

New rumors of a white knight for Irving Bank Corp. surfaced Thursday, and the price of its shares rose sharply. But the stock fell back after Barclays, the British bank, denied it was talking with Irving chairman Joseph A. Rice, who is in London.

Irving is fighting a hostile takeover by Bank of New York Co., which is offering $60 per share for its Wall Street rival. Irving stock traded as high as $70 on Thursday before receding to close at 67⅞ on the New York Stock Exchange, up 3¾ for the day. One million shares traded hands, more than three times the volume Wednesday.

The market rumors were prompted by two apparently unrelated developments — a filing by Irving on Wednesday with the Securities and Exchange Commission, followed by Barclays' Thursday announcement that it will raise $1.7 billion in a new equity issue.

Irving told the SEC it is seeking alternatives to Bank of New York's offer but made no mention of Barclays. The British bank denied it was interested in acquiring the New York bank and specifically denied that talks had occurred with Mr. Rice in London.

Irving confirmed that Mr. Rice was on a business trip in Europe with the banking firm's executive vice president and controller, Anthony R. Burriesci. There has long been speculation that any white knight for Irving would have to come from the ranks of foreign banks, particularly European banks.

In New York, the rumors were sparked by an SEC filing containing the court affidavit of Milton Berlinski, vice president of Goldman, Sachs & Co., Ir-

Banks Make Steady Progress In Municipal Bond Underwriting

By JOHN P. FORDE

Fifth in a Series

NEW YORK — Prominent on a glass table in William N. Hudson Jr.'s office at Marine Midland Banks here is a scorecard from a football game between the Miami Dolphins and the Buffalo Bills.

Mr. Hudson, a Bills fan himself, isn't displaying the program because of team loyalty. The head of Marine's municipal securities division has business reasons for liking the Dolphin's spanking-new Joe Robbie Stadium more than the individual teams involved in the game.

Marine, through a subsidiary that provides financial advisory services for municipalities, assisted Mr. Robbie, the Dolphins' owner, in arranging the financing for the stadium's construction. It also comanaged, with Southeast Bank of Florida and Citibank, a $90 million bond issue for the stadium.

Banks have been chipping away at restrictions on underwriting municipal revenue bonds, and their efforts are paying off as large bond deals more frequently include banks as underwriters. On Tuesday, for example, Citicorp investment bank here was named one of six senior underwriters to manage a debt financing by the Louisiana Recovery District, Baton Rouge. The underwriting could total more than $1 billion.

Nonetheless, banks remain unable to

Who's Insuring What for Whom: First Republic's Lessons

By **KAREN D. SHAW**

THE FAILURE of First Republic Bank, coming on top of the shaky rescue package for First City and the continuing thrift industry crisis, concentrates the mind wonderfully on the prospects for the deposit insurance system as a whole.

Indeed, the nature of these recent failures — and the response of the deposit insurance funds to them — pose vital public policy questions which can directly affect the future of every large insured depository institution in this country.

These concerns are not academic. During an era of unprecedented stress on banking industry profitability and unremitting competition at home and abroad, every factor which affects the structure and stability of the U.S. banking system must be carefully evaluated.

The system is simply not strong enough to absorb unnecessary stress, and regulatory policies which may — inadvertently — contribute to the stress pose as much of a risk to the industry as the banking buccaneers or economic downturns blamed for industry problems.

Perhaps the most troubling aspect of all, in the package put together hurriedly to rescue First Republic, is the Federal Deposit Insurance Corp.'s assurance that all deposits will be insured, regardless of amount. This policy echoes the tactic used in the First City restructuring package and the Continental Illinois bailout. At one stroke, the FDIC has converted all of these banks from the worst to the best bets in town — they're now the only institutions in the country which carry the federal government's backing for every deposited dollar.

In each case, the FDIC took this extraordinary step in order to contain a raging fire. All of these banks experienced massive runs before the FDIC issued its pledge to back all deposits.

The government's guarantee has acted to steady depositor confidence and, at least, slow, the pace of withdrawals. Given the nature of the emergency, the FDIC's action is completely understandable, and it's difficult not to be sympathetic to the dilemma of federal decision makers caught in a critical period.

Nevertheless, the pledge of 100% deposit insurance for large failed banks raises several very troubling questions. Why did the FDIC issue these guarantees in three large failures, while hundreds of small banks have disappeared without similar comfort to their depositors?

Are Some Banks Really Too Big to Fail?

Are there actually banks which are "too big to fail," as some Congressmen have alleged? If so, what obligations do such government-sponsored corporations owe to the public, the economy, and the government which gives them an advantage afforded no other type of privately held corporation?

In 1980, Congress raised the amount covered by federal deposit insurance to $100,000 per account. This substantially broadened the pool of insured funds, and also spawned a money brokering industry, which placed easy-to-handle $100,000 deposits with institutions offering high certificate-of-deposit rates across the country.

Increasing the insurance threshold decreases the risk of holding funds in an institution, and it has made both personal and institutional depositors far less concerned with the stability of the institutions in which they place their funds. It has, therefore, increased the amount of "hot money" found in marginal banks, money which flows out quickly when problems become too obvious to avoid. At that stage, the institutions becomes so vulnerable to massive outflows that no temperate policy of gradual rescue seems viable and the FDIC has been forced to rescue the bank as a whole.

In contrast, small institutions, too out-of-the-way or too dependent on local funds, do not generally experience these hot-money runs when they are endangered. The size of the potential failure and the obscurity of the bank generally pose no overall market risk. In these cases, the FDIC can either arrange a purchase or pay off depositors to the insurance limit.

These big bank bailouts seems to have created a new class of institutions which are so vulnerable to deposit volatility and so intertwined with the national payments system that they cannot be allowed to fail. Because of their size, such banks are generally difficult institutions to merge or sell — even in shotgun marriages.

Indeed, new capital adequacy rules will further limit the number of potential acquirers over the next five years. This makes it even more likely that any future problems of the current scale will also have to be rescued directly by the FDIC, rather than handled through purchase-and-assumption transactions.

No Rescue for Shareholders

It is, of course, important to note that the FDIC has not rescued the shareholders in these large banks. Nor, in recent years, has it saved the bank holding companies, since it now can isolate the insured bank from the holding company structure. However, the customers and creditors of these failed bank enjoy a privilege shared in no other sector of the economy — their risks are covered by the full faith and credit of the United States government.

If some banks are indeed too large to fail, then they are also wards of the state, protected in vital ways against management folly and market downturns. As is always the case, such protection cannot come without cost. Indeed, if Congress comes to recognize that some banks are, in effect, nationalized, the price of this protection may resemble the price extorted by the bare-knuckle brigade for "protection."

Why did the FDIC issue these guarantees in three large failures, while hundreds of small banks have disappeared without similar comfort to their depositors?

— **Karen D. Shaw**
Executive Vice President
Institute for Strategy Development

If the government stands behind large banks, then large banks may be expected to back government policy. For example, banks could — as is already being suggested — be required to make banking services available to all persons or to lend certain amounts to designated groups of small business or selected industry sectors.

Opponents of new bank powers have historically used the argument that banks should not be allowed to compete because deposit insurance gives them an undue advantage. Certainly, if some banks are not permitted to fail, then they in fact do have a market advantage.

Creditors, for example, may be willing to extend funds to large banks on terms not available to other financial service firms, knowing that their loans are fully secured. Such banks may also be able to gather funds at lower cost than other financial institutions, since all deposits are implicitly guaranteed.

What size of bank would fall into this protected category? It's hard to say, but it would appear that any bank big enough to place a substantial drain on the FDIC's $18 billion fund or to be a national payments system player might fall into this group.

Most banks of this size would not welcome the obligations which come with a 100% deposit insurance guarantee. But it may be difficult to refuse if, when large banks are troubled, the FDIC continues to provide complete coverage.

Is the FDIC big enough to handle this self-imposed burden? Probably not. The $18 billion or so in the fund now is more than adequate to deal with anticipated problems, particularly if these situations are diagnosed early and treatment prescribed before the disease slips into the terminal stage. This same sum is not, of course, enough actually to pay depositors at the banks in question, but the FDIC does have access to the Treasury in emergency situations.

It might be argued that a premium increase is necessary not only to compensate the FDIC for funds already spent in these recent failures, but also to buttress the fund against any future large bank failures in this new era of complete coverage. Small banks already believe that big banks should pay deposit premiums on their foreign deposits, although they want their own premiums reduced at the same time.

Banks Can't Afford Higher Premiums

The banking industry simply cannot afford to pay any more premiums. Even the seemingly modest one-twelfth of 1% charged now is a substantial sum for banks of all sizes. Premium assessments paid into the corporation in 1987 amounted to $1.7 billion — accounting for 46% of the net industry profit of only $3.7 billion.

If we can't make the banks pay much more into the deposit insurance fund without, in the long run, destabilizing the industry even further, where's the money to come from? It seems unlikely that Congress will appropriate funds. In these budget-conscious days, there isn't enough money to pay even for current claims on Uncle Sam.

The picture grows even more bleak when the thrift industry crisis is factored into the picture. Some have felt that the ultimate savior for the bankrupt Federal Savings and Loan Insurance Corp. is a merger with the affluent FDIC. But, as noted, the FDIC is under its own stress. As long as it promises to pay 100% on all deposits in large troubled banks, it cannot afford also to assume the burden of the thrifts.

The solution must lie not in pumping more money from banks or taxpayers into deposit insurance — there simply isn't the money out there. Instead, this complex problem of offsetting public needs will have to be met with a complicated solution. The answer lies in a combination of careful regulatory action, reform in the deposit insurance system, and legislative changes to bolster bank and thrift profitability.

Changes in the regulatory structure which would help in the short run include increased disclosure of bank and thrift financial conditions — allowing depositors and creditors to assess realistically the risks of dealing with a particular bank. In addition, regulators should be especially careful to adopt no policy which hampers profits.

The new risk-based capital adequacy proposals, which intended to strengthen the banking system, may actually weaken it in the long run as vast new costs are imposed on institutions of all sizes. It is worth noting, incidentally, that First Republic when it failed had a 9% capital level.

Changes in the deposit insurance system will need to ensure that the funds have the resources to deal with crises before they happen. First, the resources available to the supervisors need to be increased; the budget costs of doing so pale in comparison with the

Banks Continue Incursions into Municipal Bond Area

➸ Continued from Page 1

participate in underwriting a large part of this section of the bond market. The Glass-Steagall Act prohibits banks from underwriting most municipal revenue bonds on the premise that they are more risky than general obligation securities. So far, the Federal Reserve Board has granted 11 banks broader underwriting authority, but a federal court has issued a stay that is expected to keep banks out of the area until Congress acts.

"Banks have been disadvantaged in that they are kept from about 50% of the [bond] market in most years, and as much as 70% in some years, because they cannot underwrite revenue bonds," Mr. Hudson says.

Banks have responded to this prohibition by staking out specific areas of the municipal finance business.

Marine Midland seeks to advise municipalities on every part of their financial needs, from bond issuing to cash management services. Their customers include a lot of smaller issuers that do not do their own cash management.

Bigger institutions have staked out different areas, with most focusing on their underwriting capabilities. Morgan has become the lead underwriter of revenue bonds for higher education, for example, while Citibank has become one of the chief revenue bond underwriters for the housing industry.

Despite the fact that they are picking up business, banks are in a difficult situation because these market segments are relatively small. For example, in 1985, Morgan underwrote the largest education bond offering in history — a $345 million issue for the University of Texas System. This is small compared with some of the largest revenue bond issues, like the $7 billion in financing that is being considered in the proposed privatization of the Long Island Lighting Co.

Getting the Hospital Business

Using methods similar to those used to gain other securities powers, banks have worked to expand the types of issuers for which they can work. One area in which this succeeded is the underwriting of some types of revenue bonds issued by hospitals.

Strictly speaking, banks are not allowed to underwrite hospital revenue bonds. However, in 1986, bank regulators interpreted the permission banks have to underwrite education bonds to include teaching hospitals.

Under this interpretation, revenue bonds issued by those hospitals with medical schools, which include most of the largest institutions, are fair game for bank underwriters. In 1987, Morgan underwrote the largest single hospital offering ever, a $460 million issue for Columbia Presbyterian Hospital Center in New York.

Bankers estimate that revenue bonds, which banks are not eligible to underwrite, constitute about half of all municipal bond issues in many years. Revenue bonds are considered the most lucrative area of municipal bond underwriting, because they are for larger deals and have negotiated fees.

However, revenue bonds are becoming a tougher business, and bankers estimate that spreads in the bond market have narrowed by about 35% recently. An underwriter who had previously been earning about $22 per $1,000 bond about three years ago would now earn only about $13.35 per bond on a similar issue. Bankers claim that with their lower cost structure and retail distribution network, they can make the business work at lower spreads.

Activity in this segment of the market is weakening. According to a study by IDD Information Services, the volume of negotiated municipal financings, which include most revenue bonds, slipped 38% to $4.4 billion in 119 issues in January 1988. That compared with $7.1 billion in 161 issues in the first month of 1987.

In 1987, Morgan underwrote the largest single hospital offering ever.

General obligation issues, which include those that banks are allowed to underwrite, tend to be for smaller amounts. Even more important, the fees for these issues are set through a competitive bidding process that tends to keep them small.

However, the volume of competitive bid issues was 74% higher in January — 77 competitive bid issues worth a total of $1.5 billion. That compared with 50 issues worth a total of $856.7 million in January 1987.

Already, banks are preparing for the Glass-Steagall walls to fall. Arthur Kalita, managing director of J.P. Morgan Securities Inc. and executive director of the Public Securities Association, estimates that if banks receive permission to underwrite revenue bonds, his company will increase its underwriting staff from the present level of 26 professionals to about 40 in three to four years.

A Changing Market

The municipal bond market is undergoing a restructuring that has seen some of the top underwriters leave it flat, while others move in to take a larger share of the business.

Large regional banking companies are beefing up their municipal bond operations. Citizens and Southern National Bank, Atlanta, for example, recently hired Edward L. Prince, a former vice president with Chemical New York Corp. who was in that firm's hospital and higher education groups.

Mr. Prince will manage the company's public finance department in Tampa, Fla. The unit raises capital and provides financial advice for state and local governments as well as for hospitals and universities.

George Cooke, manager of Citizens and Southern's portfolio/funds management group, said the hiring of Mr. Prince and Raymond Lacey, who worked with Mr. Prince at Chemical, indicates that underwriting municipal revenue bonds is an important part of his company's regional banking practice.

"Muni underwriting helps to facilitate the growth of the community," Mr. Cooke says, "making sure that the community gets the funding necessary to grow." He believes that a change in Glass-Steagall to allow full revenue bond underwriting would increase competition among underwriters and allow smaller communities to lower their fees in issuing bonds.

According to a survey done by Securities Data Co. and *The Bond Buyer*, the top 100 municipal bond firms underwrote $96.9 billion in municipal debt during 1987. That was out of a total of $101.6 billion in municipal issues for the year.

Merrill Lynch Capital Markets led all underwriters in 1987, with 272 issues worth a total of $8.6 billion. That amounted to 8.5% of the total market for the year.

(Both *The Bond Buyer* and Securities Data Co. are subsidiaries of International Thomson Organisation Ltd., which is the parent company of the *American Banker*.)

Citibank was the top bank municipal bond underwriter for the year, with a total of 33 issues worth $1.9 billion, for a 1.9% market share. Chase Manhattan Bank, J.P. Morgan Securities Inc., and Bankers Trust Co. were the only other bank companies that underwrote more than $1 billion in municipal issues last year.

Banks are much larger players in markets in which they can compete on an even basis, bankers say. For example, Citibank ranked fourth among underwriters of general obligation municipal issues in 1987, with 22 issues worth a total of $1.6 billion, for 5.1% of the market.

Bankers in the business say their institutions could be a lot more active if the Glass-Steagall Act were repealed. A full-fledged municipal bond business would enable banks to attract top municipal bond underwriters, bankers say.

Nelson D. Civello, deputy division executive and director of Marine Midland's public finance group, says recognized talent is a necessity in building a municipal bond underwriting business. The performance of a municipal bond underwriter depends on "the creative talent of investment bankers and the distribution power of your desk," Mr. Civello says. Currently, he says, "banks can't bring in top talent because their desks don't have the top drawing power of revenue bonds."

Moving Professionals

Turmoil in the municipal underwriting industry may supply banks with the professionals they need to build their businesses, however. Many securities firms overexpanded in the blindingly profitable bond market of the mid-1980s. As the market became tougher, they've been cutting back. The reduction in staff has been, in many cases, even faster than the expansion of a few years ago.

This decompression of the industry started with Salomon Brothers Inc., which had been one of the leaders in the municipal bond industry. Salomon closed its municipal bond underwriting business last fall, blaming the poor operating environment of the municipal industry.

Banks have staked out specific areas of the muni business.

Other top municipal bond underwriters followed, including some of the major banks. The list of institutions cutting back included L.F. Rothschild & Co.; Continental Illinois National Bank and Trust Company of Chicago; and Kidder, Peabody & Co., as well as Citibank and Morgan Securities.

Observers say the cutbacks were the result of too many competitors chasing too little business. The Tax Reform Act of 1986 changed the rules on what could be issued on a nontaxable basis. "We used to have a 50% piece of a much bigger pie," Mr. Kalita says.

And the volume is probably not going to get much better. According to a study by Sanford C. Bernstein & Co., the volume of future municipal financings will not be robust. The report points out that municipal debt issued to raise new capital has historically grown at the same rate as the gross national product, which has been 8.5% for the period of 1981-86. A recession would slow this rate of growth even further.

This concludes the *American Banker*'s five-part series on the progress commercial banks have made in investment banking. On Monday, a related story will look at whether banks are making any money in investment banking.

Even securities firms are seizing on the downturn in their quest to bar banks from entering the municipal bond business. Edward I. O'Brien, president of the Securities Industry Association, said in a report last month: "While banks are seeking to enter the municipal underwriting and commercial paper underwriting [fields], some securities firms in these fields are leaving, or reducing their role in, those businesses because of their unprofitability."

The securities association's report went on to say that the "withdrawal suggests fewer rather than more competitors are needed to supply these services to users." ■

Correction

A March 30 article on page 3 and an April 4 correction on page 2 incorrectly reported that Broadview Savings Bank, Cleveland, has been barred from selling software until 1990. Under the settlement of a federal suit, Broadview cannot market a banking applications package licensed by Robert A. Foraker until March 31, 1990. In the meantime, however, the thrift can develop and sell other software products.

An American Banker Special Report

Investment Banking Party Ends As Commercial Banks Get Invite

By DAVID NEUSTADT
Last of a Series

NEW YORK — Pity the poor commercial banks. They have stood for years with their noses pressed to the window of investment banking, hungering mightily for those gorgeous and oh-so-fattening profits.

And now, just when it looks like that snooty doorman called Glass-Steagall is getting canned — so they can come right in the front door, get a regular table, and join in the feast — all those rich desserts are being cut from the menu.

INVESTMENT BANKING: How Are Banks Doing?

Investment banking has always been a cyclical business, though it was easy to forget that during the bull markets of the 1980s. But the party is over. Investment banking industry profits peaked in 1986 and will decline until 1991, according to a study done before the October stock market crash by Michael Goldstein of Sanford C. Bernstein & Co.

And even while Wall Street was raking in huge profits, overcapacity was cutting the industry's pretax return on equity. It was down to 4.5% in 1987 from 49.2% in 1980, according to the Securities Industry Association.

As more and more products are priced like commodities, and competition be-

Spotlight on Regulators

State Banks Wary of Using New Powers

By BARBARA A. REHM
Washington Bureau

WASHINGTON — No one knows whether Congress will enact comprehensive banking legislation this year, but many states aren't waiting to find out.

Most state bank regulators predict the federal government will end up rubber-stamping state actions on bank securities underwriting, real estate development, and insurance activities. That is how Congress handled NOW accounts and interstate banking, recalled state bank regulators in interviews last week.

For now, however, the uncertainty over federal action on bank legislation — and what is interpreted as bullying from the Federal Reserve — is keeping many state banks with the power to enter real estate, securities, and insurance markets out of the businesses.

FDIC Expects 33¢ on Dollar In Loan Sale

$800 Million Loss Possible On Assets of Continental

By LISABETH WEINER
Midwest Bureau

CHICAGO — The Federal Deposit Insurance Corp. said it will seek a minimum of $415.7 million from the sale of the remaining $1.2 billion of loans it retains from the 1984 bailout of Continental Illinois National Bank and Trust Company of Chicago.

That is another indication that the 1984 shareholders of the bank's parent, Continental Illinois Corp., will be wiped out. Those shares are now held in a shell company, Continental Illinois Holding Co.

When the sale proceeds are added to money collected through the workout of other bad loans, the bailout's costs are expected to far exceed $800 million, which, under the rescue agreement, will enable the FDIC to acquire all the shares in Continental Illinois Holding for just $400.

FDIC Chairman L. William Seidman recently estimated that his agency will lose $1.7 billion overall on the Continental bailout.

The loan package put up for sale includes 520 poor-quality loans in six industry segments — international, oil and gas, commercial, personal, maritime, and real estate.

The FDIC last week began to distribute the bid documents that detail the loan package. Steven Seelig, associate director of liquidation for the FDIC, said that more than 60 investors have expressed an interest in buying the loans. The potential buyers include in-

BANKING TRENDS

A Wide Road Leads to Today's Top Bank Job

By DR. PAUL S. NADLER

TO explain the role of the bank investment portfolio in my classes, I always point to Gridley, the investment officer, and I give the following scenario:

Business is bad, loan demand is weak, interest rates are low, bond prices are high. The lending officers don't need the money, so the bank turns to Gridley and says "Gridley, buy bonds."

Then business starts to pick up. Loan demand increases, interest rates rise, and bond prices fall. Just at that time, the bank needs the money back for loans, so they go to Gridley and say, "Gridley, sell the bonds and get us back the money."

The next day Gridley gets a call from the chief executive officer: "Gridley, you stupid idiot. Why do you always lose money in the bond market?"

You will notice that Gridley never becomes president. How do you explain to the board that the guy who always loses money in the bond market should be the next president?

The class laughs but at the same time they understand that investments other than secondary liquidity are a residual use of bank funds and as such should be treated specially in tax planning and assets allocation.

But there is another job class of individuals who haven't become president — or least haven't in years past: the operations officers.

Studies of bank operations tend to show that there are four reasons why Schmidlap, the operations officer, also never becomes bank president:

First, he doesn't use the same terminology as the rest of the bank, so he is never fully understood. This explains why one of Nadler's laws is, "Show me a man who goes to the chief executive officer and uses the term 'interface' or 'parameter,' and I'll show you a horse's rump."

Second, he promises more than he can deliver. This basically involves promising that a new technique or operation will cut the cost of doing business and eliminate jobs, when in reality all the process can accomplish is to keep things steady and prevent a burgeoning of costs.

Third, he is too literal. He develops a program, for example, that classifies a borrower as a dead beat if he owes $92.18 for the month but sends in a check for only $92. The computer program is so established that the bank starts the process of collecting the 18 cents, even though the cost of doing this may be well over $30 or $40.

But fourth and most important, the studies show that the operations officer doesn't get to the top because he hasn't been aware of what is happening in the rest of the bank.

Nadler Says:

If banks want to offer full financial services, they need top officers who understand those services.

It is hard to make successful hardware and software decisions and to plan policies, for instance on cash control, when the operations person does not know the bank's capital needs, liquidity requirements, and competitive conditions that may require special marketing programs. And because he sometimes seems to come out of left field, he seems to be less than qualified for the top position.

This, it may be added, is changing. Many operations officers are moving into other areas of the bank to expand their understanding of what the institution needs elsewhere.

Lending officers also are finding that they need to broaden their knowledge of the nuts and bolts of the organization if they want a chance at top slots in the organization.

The days are gone when the chief lending officers automatically became the only candidates for promotion when top positions were open. Those

OVERVIEW

Quixotic Policies of Greenspan Cast Him as Man of La Mancha

By H. ERICH HEINEMANN

FEDERAL RESERVE Chairman Alan Greenspan seems determined to scuttle the U.S. economic expansion. Last summer, less than a month after he took office, Mr. Greenspan raised the Fed discount rate by a half point to 6%.

The stock market crash forced the Fed to relent for a brief period, but lately Mr. Greenspan has been at it again — clamping down on monetary growth, trying to stop an already stagnant economy.

By itself, last summer's discount rate hike was hardly significant. However, the increase intensified the severe monetary squeeze that former Fed Chairman Paul Volcker initiated a year ago.

As a result, when the action backfired and triggered the stock market meltdown on Oct. 19, Mr. Greenspan was forced to reverse himself and pump money into Wall Street. The Fed gets full credit for keeping the October crisis under control — along with blame for helping to cause it in the first place.

The Fed's "easing" last fall was short-lived. It actually lasted only a few weeks. Undaunted, Mr. Greenspan has moved right back to restraint. Despite brief surges during October and January, monetary growth has been running at a rate of only 2.1% since the collapse in stock prices last October.

The rationale for Mr. Greenspan's actions is both simple and (like motherhood) superficially laudable — to prevent a resurgence of inflation in the United States. The real issues are much more complex.

A few industrial sectors — chemicals, paper, and steel provide the best examples — are short of capacity and are likely to raise their prices. But does this represent sufficient pressure on the general price level to risk a severe recession? Put differently, does Alan Greenspan have a real target, or is he tilting at a windmill?

More to the point, what would happen if the Fed overplayed its hand and the economy tumbled into a sharp contraction? Would this set the stage for a populist administration in Washington, new leadership at the Fed, and vigorous reflation of the U.S. economy? In the past, large drops in monetary growth have regularly been followed by even larger increases.

Meanwhile, there's little doubt concerning the Fed's tightening over the past year. The nation's money supply (demand deposits and currency) averaged about $760.4 billion in the first quarter, up 3.8% from a year earlier.

That was the slowest year-on-year increase in M-1 since the first quarter of 1975, the trough of one of the most severe postwar recessions. By contrast, the money supply rose by a record 16.8% in the year that ended in the first quarter of 1987.

The Fed's monetary crunch has had a

Quixotic: Page 30 ➞

Mr. Heinemann is chief economist of Ladenburg, Thalmann & Co., a New York investment banking firm.

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 30.

1. Columnist H. Erich Heinemann reviewed the campaign utterances of all the major presidential contenders, looking for "practical suggestions for dealing with the real problems facing America: a burgeoning foreign debt, the world's largest; the rapidly accelerating takeover of U.S. industry by overseas investors; and the threat of renewed inflation and erosion of American living standards in the 1990s." According to Mr. Heinemann, which candidate is addressing these economic issues?

Commercial Lending

2. In the increasingly complex world of relationships between a commercial borrower, the borrower's accounting firm, and the lender, what is meant by a reliance letter? What role might such a letter play in any lawsuit arising from the borrower's default on the loan?

3. How do Wall Street analysts explain the Bank of New York's race to sell roughly $1 billion of its assets by the end of the first quarter?

4. After a sluggish decade of relative indifference to the potential of automated teller machine networks and point-of-sale payment systems, what state has now become the nation's leader in this market — with the most dynamic commitment to electronic funds transfer?

5. Why does Irvine H. Sprague, former head of the Federal Deposit Insurance Corp., calculate that there were 203 bank failures in 1987, when this newspaper and other sources counted only 184?

6. Keith Hooper, a securities consultant for Bear, Stearns & Co., moonlights as a professional musician — with three record albums to his credit. Mr. Hooper says the style of music he plays promotes his brokerage business, noting that "the people in charge of large accounts usually enjoy ..... music."

7. Marketing maven Jack W. Whittle tested the assumption that national averages and research findings are meaningful, giving as an example a sample used to determine whether bank employees are motivated by money, noncash perquisites, or working environment. "Then a community bank applies these national findings because it assumes that local employees fit the national profile," Mr. Whittle says. What is his opinion of the validity of this assumption?

Marketing Management

8. Allen Funt Productions used secret cameras to film an unrehearsed scene in which Peter Funt, the producer's son, asked a young lady to hold the leash attached to his eight-foot-tall pet ostrich. What did this stunt have to do with banking?

9. In December, just slightly more than half the nation's home buyers chose fixed-rate loans, according to a survey by the Mortgage Bankers Association of America. New data, based on responses from 25% of the association's largest members, showed a dramatic shift in the loan preferences of home buyers in March. What type of mortgage was preferred last month by 81.2% of the borrowers?

— **Robert Paul Molay**

Investment Banking Party Ends as Banks Get Invite

➸ Continued from Page 1

comes increasingly global, margins will continue to come under pressure. And when the commercial banks become full competitors, those pressures can only increase. Investment banking is not, by itself, the solution to banks' profitability problems.

"For large banks, classic corporate banking covered a lot of overhead for the whole place," said Lowell Bryan, a director at McKinsey & Co., a consulting firm. "It is hard to make investment banking into a business that is going to do that. That does not mean that banks shouldn't do investment banking, but it is not going to be a one-for-one replacement for corporate banking. And some banks assume that it might be."

Going into investment banking is not a matter of choice for the money center banks — it is the only way they can continue to serve their corporate clients.

That applies not only to the *Fortune* 500. Thanks to increasing securitization of all kinds of financial transactions, more and more middle-market companies are able to tap the capital markets directly rather than going through banks.

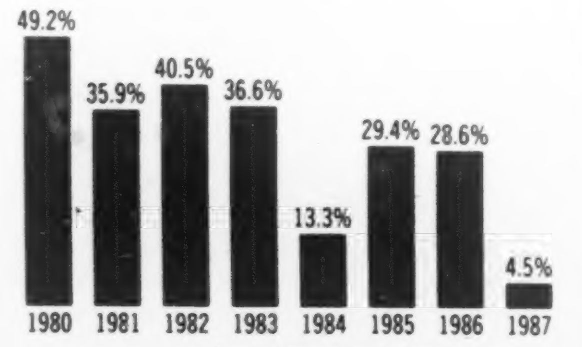
Indeed, banks themselves are strengthening this trend. The natural market for developing their investment banking business is the middle-market companies, since commercial banks often have stronger ties with the middle market than have the investment banks.

Up to now the Glass-Steagall Act has kept them out of what has been historically one of the most profitable activities, underwriting corporate debt and equity. Underwriting was the second most profitable activity for brokers, bringing in $579 million in 1986 and $470 million in 1987, according to Mr. Goldstein.

But he estimates that underwriting profits will drop to $96 million this year. And that is without any competition from the commercial banks.

Securities Industry Profitability

Pretax return on equity



Source: Securities Industry Association

Of the businesses in which commercial banks can already compete, merger and acquisition advice offers the biggest returns.

Investment banks made $828 million on merger activity in 1986, and about $719 million in 1987, according to Mr. Goldstein. That was 40% of industry profits in 1986, and 48% in 1987. He estimates that merger and acquisition work will be the top profit maker again this year, bringing in $567 million.

But commercial banks have still not become major players in the merger advisory area, despite their best efforts.

Profitability of Private Placements

Private placements, the sale of unregistered securities, is now probably the most profitable investment banking activity for commercial banks. They have built up a substantial business and gained more than a quarter of the market.

The business does not require the use of capital, since banks serve as agents, not brokers. One banker estimates that the profit margin on private placement fees is 80%.

Several investment banks have withdrawn from underwriting municipal bonds because of the decline in both volume and profits. That provides an opportunity for commercial banks to make money, but probably not as much as the investment banks used to make.

Competition has already squeezed margins in the interest rate swaps business. The imposition of risk-based capital rules will raise banks' costs, and it may be tough for them to fully recover that increase.

Unfortunately, it is impossible to tell if banks are making money on their current investment banking activities as a whole. If the banks know, they are not telling.

Fee revenues are growing at the major money center banks, but most of them do not break out what could be defined as revenues from traditional investment banking activity.

"We have asked them to break that out, but to no avail," said James McDermott, a vice president at Keefe, Bruyette & Woods Inc. Mr. McDermott assumes that "the percentage growth is strong, but that is coming off a small base."

That supposition is backed by numbers from a banking company that did separate out its investment banking fees. Chemical New York Corp. reported that fees from investment banking hit $75 million in 1987, up from $25 million in 1986 and $7 million in 1985.

Still a Drop in Chemical's Bucket

That was rapid growth, but for Chemical $75 million in revenues is still small change. In the bank's annual report, that figure is included in an item called fees for other banking services, which totaled $615 million in 1987. That, in turn, was part of noninterest income, which was $1.2 billion.

Chemical breaks out its investment banking fees so it can compare its progress against Wall Street firms, according to Roger Widmann, a Chemical managing director. For that reason, Chemical excludes revenues from foreign exchange, interest rate protection products, and fees related to bank credits or other traditional banking services, he said. "It is fundamentally advisory work of all kinds."

Chase Manhattan Corp. has a line in its annual report called investment banking fees. Those revenues grew to $202 million in 1987 from $143 million in 1986 and $83 million in 1985. But the item includes "interest rate swaps activities, loan arrangement and syndication activities, leasing activities" among other traditional bank services. And Chase had total fee income of $1.26 billion in 1987.

Bankers Trust New York Corp., one of the more successful banks in pushing into some investment banking activi-

Convenient, Comprehensive Legal Guidance on Bank Checks—All in One Volume!

Join leading banking professionals and attorneys throughout the country who rely upon **Brady on Bank Checks** for fast, accurate answers to all their legal questions about bank checks and commercial paper—in one easy-access volume!

Covers every aspect of bank check law!

Handle sensitive bank check situations with confidence! The concise, expert advice in the newly revised 6th edition of **Brady on Bank Checks** continues its over-70-year tradition of painstakingly covering the entire body of law affecting checks and commercial paper.

It's *the* one volume to turn to for daily decision-making guidance on:
- check-kiting, forgery and liability
- collection of checks
- payment of checks and delayed return
- holder-in-due-course problems
- and more.

Renowned bank check expert Henry J. Bailey has expanded the sound legal work of John Edson Brady to cover today's emerging concerns—letting you spot symptoms before the problem happens. New sections cover encoded checks, wire transfers, electronic fund transfers, bank liability for misappropriation of checks, and return and charge-back of checks, and the consequences of delay.

This must-have volume supplies the case and statute information you need to handle legal problems as they arise. It exhaustively analyzes all UCC tenets, precedent setting cases (fully annotated and indexed), Federal Reserve developments—even pre-Code statutory and case law.

Don't delay—Order **Brady on Bank Checks** today!

Foreign Banks Are Helping Atlanta Become Money Center

Continued from Back Page

go back [leave Georgia]," said Robert Moler, deputy banking commissioner. "That would be like cutting off your nose to spite your face."

Mr. Moler said Atlanta is emerging as the international financial center of the region despite the fact that Miami has more foreign bank offices. "If you're trying to serve South America, you need to be in Miami," Mr. Moler said. "If you want to serve the Southeast, you need to be in Atlanta."

The key services provided by international banks are large loans, letters of credit, currency transactions, loan participations, and scouting the region for home-based companies.

Other banks, particularly the Japanese, spend a large portion of their time serving their clients back home.

Sanwa Bank's Atlanta office devotes nearly half its efforts to Japanese investors, despite the fact that they account for less than 10% of the assets Sanwa has booked here. If the prospects choose to build in the Southeast, they usually get their financing at the bank in Japan rather than Atlanta.

But Sanwa gets its share of regional business, too. It was chosen by BellSouth to participate in the recent $500 million line of credit. It has also provided a letter of credit on a bond issue by Escambia County, Fla., lowering the municipality's rate on the bonds.

When Sanwa Bank came in 1984, it was the first Japanese bank to open an agency office in Atlanta. In a five-month period last year, three other Japanese giants — Fuji Bank, Sumitomo Bank, and Dai-Ichi Kangyo Bank (the world's largest) — got their agency office licenses.

Most of Atlanta's international banks are based in Europe or Canada. Barclays Bank of London was the first to receive a Georgia license in 1976.

Now there are four banks each from England, West Germany, and Canada. France, Switzerland, and the Netherlands each have two. Belgium, Australia, Italy, and France have one each.

Inevitably, as the international banks grow, they sometimes turn to the regionals to hire executives. "Most people imagine that we need people with broad international experience," said Norman Gillespie, local manager for the Bank of Nova Scotia, which employs 33 people here. "We need people who know the territory."

Furthermore, as the foreign banks become more established in the U.S., they often begin to consider market opportunities beyond the Fortune 500 and subsidiaries from their home countries.

"After gaining experience, they would tend to expand their horizon to Fortune 1,000 companies," said Jerome A. Wolf, manager of Algemene Bank Nederland and chairman of a new trade group that will lobby for Atlanta's international banks. "Then, after a while, they might look to the middle market."

As international banks hire local executives and ease into the corporate middle market they may add strain to relations with the local banks.

However, the regionals apparently believe the new foreign business being drawn to the region is worth the exchange.

"Some are here either because home-country clients have come to the Southeast," said James Lientz, head of corporate and international banks at Citizens and Southern Corp. "They're both following and leading their customer base. Some are just looking for an attractive banking market.

"Our posture is to cooperate with them in every possible way." ■

Quixotic . . .

Continued from Page 30

use those funds to buy real assets — among other reasons, to hedge against a future administration abrogating U.S. foreign debt through inflation. Should Washington try to inhibit such purchases, foreign lenders would demand further incentives to commit funds in the United States. Those incentives would likely take the form of a lower dollar, higher U.S. interest rates, or some combination of the two.

Alan Greenspan has it in his power to force interest rates higher, to shut down the U.S. economy and even to put Michael Dukakis or Jesse Jackson in the Oval Office. The question is, will he?

No one can answer this question for sure. But one thing is plain: If interest rates do go up, they will not stay up for very long.

The current economic expansion — the longest peacetime growth since World War II — has already started to weaken noticeably. If Mr. Greenspan's quixotic campaign for tight money continues, sooner or later he will succeed in stopping the expansion.

Then the Fed will have no choice but to put money into the economy and bring interest rates down. The Man of La Mancha will have a real windmill to attack. ■

Advisory Role Pays Best Returns

Continued from Page 38

ties, had fee and commission revenues of $369 million in 1987. Its annual report does not define what that number includes. In any case, it was part of total noninterest income of $1.6 billion.

Growing revenues do not necessarily mean growing profits. Generally, in their annual reports, banks report noninterest income and noninterest expense separately, so it is impossible to figure out whether any particular business was profitable. "It is very hard to get a handle on what kind of position they have and what returns they get," said James Hanbury, a bank analyst at Wertheim Schroder & Co.

Hanover Provides Some Figures

One partial exception is Manufacturers Hanover Corp., which provides net income and return figures on both assets and equity for six sectors of the bank. The figures are provided in the company's annual 10K report to the Securities and Exchange Commission. Its investment banking sector is defined broadly, including "origination, trading and distribution of securities, foreign exchange and other financial instruments, merger and acquisition financing, venture capital investments, and the provision of fee-based advisory products including investment management and specialized corporate finance services."

Investment banking was Manufacturers Hanover's second most profitable sector in 1987 with net income of $125 million, and the most profitable in 1986 with $179 million. The 1986 results were boosted by an unusually high $78 million in net profits from venture capital activities, which dropped to $23 million in 1987.

In 1987, the sector also had the bank's highest returns on assets, 1.29%, and shareholders' equity, 29.53%.

Citicorp reported an after-tax profit of $375 million on revenues of $2.15 billion for its investment banking business in 1987. That is down from profits of $404 million on revenues of $1.79 billion in 1986. However, the business includes foreign exchange, currency and interest rate products, investment management, insurance, and some of Citicorp's profits from taking positions of its own in various markets.

Much of commercial banks' success in investment banking has come from providing capital markets products and corporate finance advice to their traditional clients. But that creates two problems for the banks.

One is properly allocating costs. "Many banks are making money on their investment banking product line, but they are leveraging off their corporate bank infrastructure," said McKinsey's Mr. Bryan.

The other is the rob-Peter-to-pay-Paul effect of selling investment banking services to traditional bank lending clients. "A lot of the fees come from cannibalizing what used to be commercial bank spreads," he said.

But the banks have no choice. If they don't offer capital markets products to their customers, someone else will.

So the push into investment banking will continue, though not every bank is likely to succeed at it. "The truth is that we don't need as many corporate finance commercial banks who offer investment banking products as there are presently commercial banks in commercial banking," said Mr. Bryan. ■

CREDIT CARD PORTFOLIOS AND MERCHANT PROCESSING.

Rocky Mountain BankCard System, a recognized leader in the bankcard industry for over 20 years, wishes ***to purchase credit card portfolios*** of all sizes up to $50 million. Additionally, we have developed "state of the art" systems for ***merchant processing.*** Both the ***purchase of your portfolio*** and the ***processing of your current merchant members*** can be tailored to meet the unique needs of your bank.

Expedited Funds Availability

Comply with confidence

Bank Administration Institute and the Consumer Bankers Association have joined forces to develop the most comprehensive approach to implementing the requirements of the Expedited Funds Availability regulations.

THIS UNIQUE APPROACH OFFERS:

■ Intensive one-day workshops scheduled in June to prepare your compliance team to deal effectively with the project–including identifying ways to reduce the risk now associated with transaction accounts

■ A video training package with workbooks to simplify the process of assuring consistent employee training

■ Model disclosure statements to ease customers' understanding of your policy

■ A quick reference flip chart summarizing legal availability schedules to simplify verbal disclosure at the teller line.

Act now! Assure your bank has the best plan for September 1, 1988 compliance by calling 1/800-323-8552 to learn the details. Just for calling, we'll help you get started by sending you a FREE copy of our new detailed guide, Establishing an Effective Check Hold Policy.

AN AMERICAN BANKER SPECIAL REPORT

Spanish Bankers Challenging Dominance of Foreign Firms

By JOHN J. DUFFY

MADRID

When foreign banks began flocking to Spain after 1979, they were drawn by more than the sunshine and the sangria. More compelling were the profit margins in Spanish wholesale lending — huge by Euromarket standards — and the lack of strong domestic competition.

"We had a business that was very simple," said Elizabeth Stroebel, a vice president at Chemical Bank in Madrid. "We borrowed in the interbank market and lent to public companies at healthy spread over the interbank rate. The overhead costs were small, and the margins were very nice."

For the Spanish government, opening the door to foreign banks in 1979 was partly a response to the banking crisis of the late 1970s and early 1980s. Between 1977 and 1983, 50 banks — 20% of the financial system — failed because of bad loans, many to their own subsidiaries. To defray the mas-

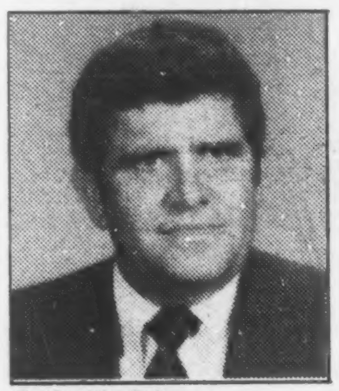
Nebraska Banker Nominated to ABA Post

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Nebraska banker C.G. "Kelly" Holthus has been nominated to become president-elect of the American Bankers Association when the industry trade group holds its annual convention in October.



C.G. Holthus

Mr. Holthus, president and 50% owner of First National Bank of York, York, Neb., beat out the chief executive officers of two other small banks: Alan R. Tubbs, president of First Central State Bank, DeWitt, Iowa; and Leon Patterson, chairman of the Palmetto Bank, Laurens, S.C.

The ABA's announcement that its nominating committee selected Mr. Holthus comes at a time of uncertainty for the ABA leadership. The group's president, Charles H. Pistor Jr., recently resigned as chairman and chief executive officer of the troubled First RepublicBank and as vice chairman of the bank's parent compa-

First City Deal May Be in Peril, Regulators Fear

But Company Confident It Will Complete Rescue

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Federal regulators said on Friday they were worried that the $1.5 billion rescue of First City Bancorporation of Texas is in danger because of jittery investors. But First City predicted it would have cash in hand and a closed deal by Tuesday.

"We plan, and intend, to complete the transaction on Tuesday," said Jim Day, spokesman for the Houston-based bank holding company.

A group of private investors led by former Chicago banker A. Robert Abboud agreed in September to provide $500 million in recapitalization for the company through a stock offering.

The deal included a contribution of almost $1 billion from the Federal Deposit Insurance Corp. The rescue has been held up several weeks while First City tried to persuade bondholders to exchange their claims for 35 cents to 45 cents on the dollar. The deadline on the $225 million of debt was extended last week — for the fifth time — until the close of business today.

First City also has lowered the minimum amount of debt that must be tendered to 70%, from 90%. First City reported last Friday that 66.1% of the debt had been turned in; the remaining 3.9% was expected by the end of today.

"The revised schedule will provide additional time to complete financing arrangements and to circulate addi-

Reading Can Enrich the Bank's Young Blood

By DR. PAUL S. NADLER

A RECENT COLUMN pointed out the opportunity lost when banks do not orient new trainees in the operations and goals of the rest of the bank.

They often give these well-educated people tunnel vision by limiting the scope of their work and not offering occasions to meet people in the rest of the organization.

I suggested that new people attend a round-robin of luncheons where they could mingle with employees from different sections. I further proposed that these new employees write up a brief description of what other departments do, so that they can both learn about the rest of the bank and possibly provide fresh inputs to those who have been doing their jobs a certain way for a long time.

The result, it was hoped, would be that the young people would learn more and be more useful in the course of their day-to-day work once they understood where opportunities to help existed. And as their knowledge grew, so would their potential for filling slots in other bank sections.

But such broadening need not be limited to new hirees. Much can be gained from having all employees attend formal meetings or informal luncheons with people in other departments. All too often we find an employee who says, "I have forty years of experience," when really he has had one year of experience forty times.

Nadler Says:

It is interesting how many younger people, new to the staff, have responded favorably to the idea of a formal reading program to help them grow.

The Value of Reading

If we are to upgrade the knowledge and usefulness of our employees, one area in which most banks could really improve procedures is through an agenda of reading relevant material offered to those who want to be more than just cogs in the wheel.

Reading has lost much of its importance in America. The average television is on six or seven hours a day. This helps explain why newspapers keep dying while TV stations sell for higher and higher prices. One comment heard regarding reading is that people don't read more than one page at a time because their lips get tired.

But to those who want to understand their bank and improve their positions in the organization, it would seem that a program of reading — taking up maybe one of the bankers' evenings a week — could do a great deal to enhance their value to the bank and to themselves.

What should people read and how should such a program be developed?

This is not an easy question.

Most bank officers feel they are besieged with articles, books, and memos. The saddest part is that once they are finished with a pile, they find they have read defensively in most instances: They have not learned much, but they have merely reassured themselves that they haven't missed anything new.

It is rather frustrating when you have read an entire article that takes 15 to 30 minutes and find that what you retain is the basic premise, which you could have gotten in seconds. That is why the news summary columns in newspapers like this one and *The Wall Street Journal* are so popular and important. They tell you that if your interest in a topic is only vague, you can get the substance of what you need to remember right now on the front page instead of having to dig in and read the entire article.

Still, how can we handle the problem of determining what to read and how to get it distributed?

As to what to read, this is not too hard a job in banking, despite all the material that is printed on the topic.

Obviously this newspaper and *The Wall Street Journal* are musts for any banker who wants to be well informed. On top of this, the three major business magazines — *Business Week, Fortune,* and *Forbes* are felt to be useful by many bankers. So are the several national banking magazines, the regional banking magazines that serve the banker's territory, and the specialized journals for each department, like lending and operations.

Beyond this, it appears to this observer that seeing the various publications of the Federal Reserve banks and the monthly and quarterly letters issued by some major banks should fill the prescription.

But this is roughly 6 magazines, 12 or 14 bank reviews, and 2 newspapers — not to mention the daily newspapers of the bank's territory. Just carrying all these around, much less paying for them and finding time to read them, makes the suggestion of being fully informed through reading an onerous one.

Finding a Compromise

How can a reasonable compromise be reached between doing nothing and spending all your time reading — at the expense of having a life outside the bank and doing your job well?

One idea is to have one person responsible for keeping a folder of all these publications. Like a lending librarian, this person would send out a memo once a week on topics that appear interesting. Then officers interested in specific topics can borrow the particular magazine or article of interest. The memo could simply be a photocopy of the title pages of the magazines and letters that come in that week. By skimming the list of titles, bankers could at least be covered on articles relevant to their work.

In a larger bank, isn't it possible to have a young trainee summarize the articles that appear each week, just as this paper and *The Journal* summarize the contents of the issue? This would be tremendously valuable for the employee who is trying to learn banking and would serve as a real time saver for the rest of the bank.

Carried further, a bank could arrange a weekly or monthly informal luncheon for those who have no business guests that day at which articles of the previous week or month could be discussed. It doesn't take much to formalize the topic of conversation in the lunchroom or wherever bankers go in groups of five or six to have a bite. So instead of discussing the ball scores, the ideas of recent articles could be summarized and discussed.

Most top-level bankers must be laughing at this article already. They feel they already have too much to do without adding a reading program. But it is interesting how many younger people, new to the staff, have responded favorably to the idea of a formal reading program to help them grow.

All it needs is top management's endorsement to organize an informal structure. Then those who want to undertake a reading program that is efficient can go on independently — helping others who want to join and not bothering those who feel too busy to participate.

For those who do join, a formal program could provide useful information about what is going on outside the bank. At the same time it may eliminate that gnawing feeling so many of us have that there are ideas coming out we should know about, but somehow we haven't found time to dig up the articles and read what they are all about.■

OVERVIEW

Trade Figures Foreshadow Life In the Slow Lane

By H. ERICH HEINEMANN

WALL STREET was shocked last week by an unexpected slump in U.S. foreign trade. According to the Commerce Department, the raw, unadjusted deficit in U.S. merchandise trade hit $13.8 billion in February, up from $12.4 billion in January. Seasonally adjusted, the deterioration was worse — $16.2 billion from $11.8 billion.

Reaction in the financial community was not pretty. Values of financial assets crumbled across the board. The Dow Jones industrial average dropped 101 points in active trading, and the U.S. dollar posted one of its largest one-day declines on record.

The episode brought the ugly realities of America's international position into sharp relief. The United States, once the world's largest exporter of capital, is now the biggest importer ($3.25 billion per week), as well as the largest debtor. This change portends basic, long-run changes in American society: slower growth (possibly decline) in living standards and loss of political and financial leadership in the world.

On a more parochial level, the good news is that U.S. manufacturing will enjoy a renaissance, as the declining dollar acts to reduce the relative real wages of American workers well below those of their counterparts in Japan and Europe. The bad news is that the center of gravity in world financial markets will increasingly shift toward Tokyo and away from New York. The major money center banks in the U.S. are well past their zenith.

As the White House admitted, last week's trade figures represented "discouraging" news. Nonetheless, Wall Street badly overreacted. U.S. exports have been moving up steadily for the past 18 months. Growth in the unit volume of imports has slowed way down — though admittedly this improvement does not show up in the monthly trade figures, which are reported in current dollars.

Despite the February setback, strong economic growth abroad and the decline in the dollar mean that a much lower trade deficit is likely. The reaction last week to the trade figures was badly exaggerated. However, it was ample warning of longer-run dangers lurking in the massive imbalance in U.S. international transactions. Briefly, these are:

- The Federal Reserve System may try to defend the sagging dollar by propping up its value in world financial markets. Should policymakers follow this course (as they did last week), the Fed would tighten its policy even more than it has already. The economy could tumble into an unintended, unnecessary recession.
- Congress may be provoked into actually passing the protectionist trade legislation that it has been debating for the past three years. Unfortunately, there is no quick fix for the problem. In fact, such a bill would not only be futile, it would also make the job of rebuilding U.S. exports more difficult. Even so, the Democratic leaders in Congress seem determined to press ahead.

Moreover, if the trade measure were to include restrictions on foreign investment in the United States (several such provisions are under discussion), participants in the foreign exchanges could provoke a major crisis. Long before the Fed would be able to bring the dollar under control, the currency would be sharply lower and U.S. inter-

Handicapping the Candidates

Lending's Lucrative to the Presidential Contenders

By ROBERT M. GARSSON

ARE the nation's banks handicapping the presidential race? At Washington's Sovran Bank/D.C. National, Rep. Jack Kemp, R-N.Y., was good for hefty credit lines at prime plus one percentage point. But Sen. Paul Simon, D-Ill., borrowed at prime plus two.

Adams National Bank in Washington also loaned money to Mr. Simon at prime plus two, for an effective rate of 10.5%. But the bank advanced cash to Jesse Jackson at a fixed rate of 11.5%.

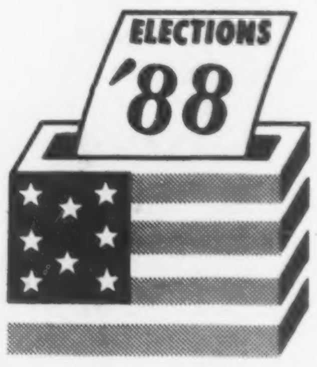
The prime rate is the base rate used by banks to price commercial loans. Though banks used to say it was reserved only for their most creditworthy customers, lenders routinely extend credit to good customers at sub-prime rates. The premium other borrowers pay over prime is largely based upon a bank's view of their creditworthiness.

Among loans to presidential candidates, the difference in terms suggests that Sovran perceived Mr. Kemp as a one percentage point favorite over Mr. Simon — if not to win the White House, than at least to make good on his debts. "Don't even suggest that," said Robert P. Pincus, president of Sovran's Washington bank subsidiary. Lower rates, he said, "are a reward for the relationship" a campaign organization has with the bank.

Mr. Pincus said the pricing decision was based on three factors: the level of deposits the organization maintains, which the bank weighs at 60%; the term of the loan, weighed at 20%; and risk, which accounts for the last 20%.

BARBARA D. BLUM, president and chief executive officer of Adams National, agreed. "The terms of the loan, the depository relationship" are key factors, she said. Risk is virtually nonexistent since the loans are secured by federal matching funds, she said.

However, experts on loan pricing suggest that the premiums charged to the Simon and Jackson campaigns represent something other than a credit for a good relationship.



"We believe it depends upon the negotiating skills of the borrower," said Christopher Bumcrot, senior vice president of Loan Pricing Corp., a New York-based firm that studies the commercial loan market.

In particular, he said, the Jackson loan — which is equivalent to prime plus three percentage points — "is a little on the high side."

Borrowers ordinarily pay a premium for fixed-rate credit, which shields them against interest rate spikes over the life of the loan. In the case of campaign loans, though, maturities are so short as to to make irrelevant any distinctions between fixed- and variable-rate pricing.

The one-percentage-point difference between the rates given Mr. Simon and Mr. Kemp are substantial, but "not outside the realm of what is normal" for similar credit risks, he said. However, Loan Pricing's data does suggest that almost all of the candidates are borrowing at premium rates.

An "average-risk loan" of $1 million to $3 million is generally priced at prime plus 50 basis points, Mr. Bumcrot said. With up-front fees added in to calculate an "all-in rate," such loans carry an average interest rate of prime plus 75 basis points.

Using that standard, two early presidential dropouts — former Delaware Gov. Pete DuPont, a Republican, and former Arizona Gov. Bruce Babbitt, a Democrat — showed the keenest negotiating skills. Both tied down loans at prime plus 50 basis points.

The worst negotiators apparently were in the campaigns of Mr. Jackson and former Secretary of State Alexander M. Haig. If Mr. Haig honed his negotiating skills while at the State Department, they appeared to be of little help in dealing with the banks: The 12% he is paying Olympic International Bank & Trust Co., Boston, is the highest rate in the field.

BANKS that lend to presidential campaigns can expect to be in the limelight, and this year is no exception. The first bank to come under scrutiny was Washington-based Federal City National Bank, whose chairman, Terrence R. McAuliffe, a Washington lawyer, was national finance chairman and chief fund raiser for the campaign of Rep. Richard Gephardt, D-Mo.

A story in *The New York Times* charged that the bank had made unsecured loans to the Gephardt campaign, an allegation Mr. McAuliffe disputes.

"It was 100% protected at all times," he said. "We had the first security interest in federal matching funds."

An earlier loan of $125,000 to the Gephardt campaign is listed as unsecured in the campaign's Federal Election Commission filings, but Mr. McAuliffe said the campaign maintained a deposit account with an average balance of $360,000. The terms of the loan did not permit that account to be drawn down while the loan was outstanding.

A second loan of $1.4 million exceeded the bank's lending limit, but the institution had an agreement with another bank, which Mr. McAuliffe refused to name, to buy $1 million of the loan.

Mr. McAuliffe, an old hand in Democratic campaign circles, charged that supporters of Sen. Albert Gore Jr., D-Tenn., leaked the story to *The Times*.

If so, it may be poetic justice that the campaign loans now raising the most eyebrows are those extended to the long-shot Gore campaign.

Mr. Gore has not yet filed reports listing the loans and their terms, but his campaign confirmed to a reporter from *The Wall Street Journal* that he has borrowed $1.45 million, generally without collateral.

One of the banks involved was Sovran/D.C. National, which was said to have advanced $750,000. Mr. Pincus declined to discuss individual loans, but said that all of his bank's campaign loans are secured.

Union Planters Bank, Memphis, advanced $400,000 to Mr. Gore on March 8 at prime plus one percentage point. Bank spokeswoman Adella Thompson said the loans are backed by matching federal funds, but said that the Treasury money will not be paid directly to the bank. As a result, the bank will rely on the campaign organization's willingness and — more important — its ability to pay its debts.

As it stands, Mr. Gore is on the verge of losing his eligibility for matching funds. Because he failed to win 10% of the votes in two consecutive primaries, he must win 20% of the ballots in New York on Tuesday to continue receiving federal money. Mr. Gore's last certification, on March 30, was for only $117,312, the lowest of any candidate except Mr. Simon, who has suspended his campaign.

Should Mr. Gore drop out of the campaign, however, he would still be eligible for matching funds to pay campaign debts and for "winding-down" costs. The Gore campaign did not return calls for comment.

COLLATERAL is a critical issue for banks that lend to presidential campaigns. Banks and other corporations are barred by law from contributing money to political campaigns, and a loan that is not repaid could be interpreted by the FEC as an illegal donation.

Generally, the Election Commission requires that loans be made in the "ordinary course of business," which is to say, that they be made on the same terms that would be extended to any other customer. There must be a written loan document showing, among other things, the date on which the loan is due and the interest rate. Finally, the lending institution must be assured of repayment.

How a lender can be assured of repayment has been the stumbling block so far. In a case involving the failed 1984 presidential bid of Sen. John Glenn, D-Ohio, for example, the FEC even studied polling data before concluding that four Ohio banks essentially made a poor business judgment in extending loans of $2 million. In that case, the Glenn campaign was assessed a small fine. The loans are still outstanding.

IN most cases, the loans are secured by matching federal funds, which are predictable in advance. Banks generally loan only a percentage of the amount anticipated in matching funds. Adams National will advance up to 80% of the campaign's previous month's submission to the FEC, for example, and the loan is paid off as soon as funds are wired from Treasury.

"The monies come directly to the bank," said Mr. Pincus. The old loan is paid off and a new loan is made based upon the pending applications for matching funds. (Candidates can apply for matching funds on the second and fourth Mondays of each month.)

Opportunities to lend money to presidential campaigns only come along once every four years, but while the window is open, business couldn't be better, say the bankers who advance funds to would-be presidents.

"Everybody in the country is going to want to be in this business once they figure out how good it is," said Adams National's Ms. Blum, a former Carter administration official. In addition to being good credits in their own right, she said, campaign loans tend to bring other business into the bank.

"We made a loan to Jackson in 1984, and we've had a very pleasant relationship since," she said. Mr. Jackson's Rainbow Coalition opened accounts, as did other nonprofit organizations with ties to the Jackson camp.

"They have been wonderful accounts," she said. ■

> "Everybody is going to want to be in this business once they figure out how good it is."
>
> *— Barbara D. Blum, president and chief executive officer of Adams National Bank*

Bank Lending Along the Campaign Trail

Candidate	Lender	Amount/Terms	Status
Bruce Babbitt	Valley National Bank	Two credit lines, $750,000 total, Prime + 1/2, secured	
George Bush	Sovran Bank/D.C. National	$50,000, Prime + 1, secured	Repaid March 9, 1987, less than a month after loan taken
Richard Gephardt	Federal City National Bank, Washington	$125,000, secured, 8.75% and $1.4 million, secured, 9.75%	$1 million sold through a loan participation agreement.
Albert Gore	Sovran Bank/D.C. National Union Planters Bank, Memphis Bank of Putnam County, Monterey, Tenn., Volunteer State Bank, Portland, Tenn., Bank of Huntingdon, Tenn.	$750,000. $400,000, Prime plus 1 Each $100,000	Borrowed heavily in March for Southern regional primary and again for New York primary. Report due April 20 should detail loans.
Jack Kemp	Sovran Bank/D.C. National	Numerous loans through two credit lines. Prime + 1, secured.	Total loans of $2.45 million in 1987 and $750,000 in 1988. Repayments total $3,050,000 through end of February.
Pat Robertson	Sovran Bank/Chesapeake	$7.4 million in loans in 1988. Prime +1, secured.	At least $1.5 million repaid through February, 1988.
Paul Simon	Sovran Bank/D.C. National First National Bank of Collinsville, Ill. First National Bank of Chicago Adams National Bank, Washington	$885,296, prime + 2. secured. $45,000 secured by Mr. Simon. Prime. $300,000. Prime + 2 secured. $1 million (repaid). Prime + 2, not secured. $523,674 ($110,000 repaid.)	$1 million Adams National loan exceeded bank's loan limit, and $250,000 was upstreamed to holding company as a result, according to bank officers.
Alexander Haig	$340,000. Olympic International Bank, Boston	$340,000, 12%.	Revolving credit line
Pete DuPont	Wilmington Trust Co.	$828,000. Prime +1/2, secured.	Campaign used controlled disbursement account to limit borrowings.
Jessie Jackson	Adams National Bank Independence Bank of Chicago	$500,000, secured at 11.5% $50,000 unsecured, 9%	

Loan amounts are reported differently by each campaign and subject to some interpretation. Most often, however, the amount shown in the table represents a a credit line that is drawn down and repaid regularly as federal matching funds are received. In the Haig campaign, for example, the $340,000 shown above was drawn down and repaid several times over.

VOL. CLIII NO. 79 Friday, April 22, 1988 rd Year

Today

BankAmerica Corp.'s income increased 63% for the first quarter, largely due to cost cutting, tax credits, and a reduction in the bad loans that have crippled the banking giant for much of this decade. The largest bank on the West Coast said it earned $109 million, or 56 cents a share. 2

Electronic Data Services Inc. says its 10-year facilities management agreement with First City Bancorporation of Texas is one of its biggest financial services contracts. Under the agreement signed this week, the Dallas firm will take over First City's data processing operation. 2

Three major British banks plan to launch Switch, a joint debit card system to compete with Connect, introduced by Barclays Bank last year. Switch will be issued by Midland Bank PLC, National Westminster Bank PLC, and the Royal Bank of Scotland PLC, starting next fall. 2

A rarely used policy that allows the sale of a bank charter kept a small Illinois bank from failing. The transaction that salvaged Martinsville State Bank could be adapted to prevent the closing of other distressed banks and thereby reduce the FDIC's expenditures. 3

An updated listing ranks top merchant banks for credit cards and top bank card issuers. 16

The Farm Credit System warned it plans to scrutinize the practice of underpricing loans by some member institutions. 23

COMMENT

Floundering thrifts may see salvation in the FDIC fund, but this protection will not help those that are overextended and poorly managed, according Irvine Sprague. 4

THRIFTS & MORTGAGES

The two top corporate debt rating agencies, Standard & Poor's Corp. and Moody's Investors Service, are expanding their scrutiny of the deposits and publicly issued debt of large thrifts. 2

Dollar volume of mortgage-backed securities fell almost 40% in March, compared with February. The month's total was also off from a year ago, as was the dollar amount for the first three months of 1988 versus the same period in 1987. 8

Just as the thrift industry was giving up on the new team at the Federal Home Loan Bank Board, the board signed a contract stating its intentions to sell insolvent American Savings and Loan Association, Stockton, Calif., to Texas millionaire Robert Bass. 8

Thrifts Seek Leaner Operations As Industry's Efficiency Falls

By LINDA ELLIS

First of a Series

Thrifts are on a diet and not a moment too soon.

With deregulation and market forces rocking the once complacent industry, savings institutions should have steadily decreased noninterest expenses to compensate for having to pay market rates for deposits. They didn't, allowing expenses to rise and thinning only the bottom line.

But now many institutions are vowing to change their ways, exploring and implementing strategies to heighten profitability.

The first order of business is to get back to the efficiency level of just a few years ago. As a percentage of total assets, thrift operating costs (noninterest expenses such as personnel, sales, and overhead) have climbed from 1.56% in 1984 to 1.97% in 1987, according to Federal Home Loan Bank Board data.

Being lean but not necessarily mean

Security Pacific Aims to Trim Growth In Noninterest Expenses to 7% a Year

By ROBERT LUKE

West Coast Bureau

LOS ANGELES — Security Pacific Corp.'s noninterest expense has been rising faster than its assets and revenues, prompting many in the investment community to complain.

But the company's president and chief operating officer says the nation's sixth largest banking firm has embarked on a "rather aggressive" program to rein in those costs.

"We are moving down to the 7%-to-10% range" in expense growth, George F. Moody told reporters after the company's annual stockholders' meeting earlier this week. "Seven percent overall is a good target, assuming that we are going to continue to expand at the rate of 10% to 15% per year."

Over the past five years, Security Pacific's noninterest expense has grown at an annual rate of 18%, while assets have expanded at an annual rate of 12%. As a sign of progress, Mr. Moody said noninterest expense in the first quarter was only $6 million higher than for the third quarter of 1987, when the company acquired Rainier Bancorp., Seattle.

"Our overall noninterest expense is

Irving Agrees To Hold Talks With Suitor

But Bank of New York Continues Proxy Fight

By GORDON MATTHEWS

NEW YORK — In a dramatic reversal, Irving Bank Corp. on Thursday softened its opposition to a merger with Bank of New York Co., saying for the first time that it is willing to talk with its persistent suitor.

The development came as Irving moved to delay its annual meeting for seven weeks, which would also postpone Bank of New York's effort to gain control of Irving's board of directors.

But Bank of New York, apparently feeling it has the upper hand, harshly denounced Irving and said it would go to court to force a resolution of the proxy fight by Saturday.

The turn of events is the strongest indication to date that Bank of New York is winning its bitter six-month battle to take over Irving.

"The war is over," said John J. Lyons, managing principal of Lyons, Zomback & Ostrowski, the New York financial consulting firm.

Mr. Lyons also said it seemed likely from Irving's action and statement that the company's management and directors had gotten indications from the shareholder proxies that they might loose the contest and be forced out of their posts by Bank of New York.

The development was the latest twist in a tumultuous week that has seen the emergence of a white knight and an unusual rebuke of Irving by the Federal Reserve Board.

Irving previously had been unyielding in its opposition to Bank of New

FDIC Protection Will Not Save Certain Overextended Thrifts

By IRVINE SPRAGUE

PLANS ARE UNDER WAY for the biggest heist in history. It is to be a daylight raid, conducted as the world watches. The idea is to steal the FDIC insurance fund, which has been built up to more than $18 billion over 50 years of bank assessments plus interest earned on the funds. No taxpayer money is involved.

Prudent management through all administrations, Democratic and Republican alike, has been an FDIC trademark as the fund was carefully nurtured over the years.

If the plotters get away with it, the FDIC fund will be used in an attempt to bail out the savings and loan industry and with it the sharp and shoddy operators who ran hundreds of institutions into the ground.

The euphemism used for the raid is: "Consolidation of the Insurance Funds." I guess that means that the credit union fund would also be tapped for the benefit of those who mismanaged the now bankrupt savings and loans, while operating on the shady side of respectability.

The idea of dipping into the FDIC fund has been around for a long time. But the idea is so outrageous that I never gave it a serious thought. Congressman Gerald Kleczka of Wisconsin earlier introduced a bill to consolidate the funds but I figured it was just another of the 15,000 bills introduced each Congress.

Then, when recently in Florida for a few days in the sun, my vacation was ruined the first morning when the *Florida Times-Union* of Jacksonville was delivered with my breakfast of hot cakes and sausage. A long article by Mark Basch on the business page, under a four column banner headline, said the bill was alive and quoted Bill Isaac at length. Mr. Isaac was reported as saying it would take from $35 to $64 billion to resolve the savings and loan industry problems, adding: "I believe there is no alternative to merging the funds."

Other Side of the Coin

If former FDIC chairmen are to give such advice — Mr. Isaac followed me as chairman — then it seems proper for me to paint the other side of the picture. I believe the present chairman, Bill Seidman, and all other previous chairmen, with the one lone exception quoted above, agree with me.

Briefly put, the FDIC fund provides the depositor confidence that make our banking system work. Without a strong fund, big enough to take on whatever comes, we would have had chaos on many occasions. A few come readily to mind: The October stock market crash, Penn Central, First Pennsylvania, Continental Illinois, and the climax — 203 bank failures last year. And don't overlook Texas. Still unresolved are problems of two of the largest bank holding companies in the nation, and their miseries are shared by hundreds of smaller institutions in the Lone Star state.

It would be instructive to take a look

Comment: Page 6 ➜

Mr. Sprague served as chairman or director of the Federal Deposit Insurance Corp. for more than 11 years. During that time, he handled 374 bank failures, more than anyone else in FDIC history.

LETTERS TO THE EDITOR

Payne Denies Favoritism Played Role in Selection

To the Editor:

The article written by Jim McTague on April 4 ("Probe: Payne Had Ties to Hiring Panel," page 6) is unfortunate in its emphasis and in the presentation of the facts.

The purpose of this letter is to set your record straight on several issues:

- It is regrettable that the article was so biased. Mr. McTague has the names and telephone number of such sources as William McKenna, former FADA chairman; John Zellars, vice chairman; and W.W. McAlister 3d, former head of the FADA selection committee; and Ron Walker of Korn Ferry, all of whom participated in the initial selection process of the chief executive officer of FADA and could articulate directly the process, my background as an experienced real estate executive, and the roles of all involved.
- The article certainly implies favoritism shown me in hiring as FADA chief executive officer when my only contact to the selection committee abstained from voting and the process itself was very professional and comprehensive.
- Mr. McTague certainly understands the circumstances and reasons relating to my decision to leave FADA. He has a copy of my letter of resignation.
- The real news item was a report from the Inspector General's Office of the Federal Home Loan Bank which, after a thorough review of the well-publicized allegation against the Federal Asset Disposition Association, brought in large part by William Juliano and Pasquale Verona, were found to be without foundation. These are examples of individuals who have aggressively used political and press means to attempt to serve their own interests versus the economic interests of the savings system.

A more objective editorial view might give FADA the appropriate credit for successfully fulfilling much of its mission under extraordinarily difficult operating conditions.

Roslyn B. Payne

Ohio Bank Chief Backs States' Role in Exams

To the Editor:

The comments relating to state and federal cooperation on bank examinations and attributed to me in your April 12 article "Seidman Wants More Time to Sell Banks" [page 2] understated my enthusiasm for such programs.

As a regional supervisor with the Federal Deposit Insurance Corp., I was a strong proponent of cooperation among various banking regulators. I am continuing to push such efforts as superintendent of banks for the state of Ohio.

Ohio is indeed a leader in state-federal banking examination partnerships. Ohio became the first state in the nation to establish an automated link with a Federal Reserve Bank's information system when we tied in with the Federal Reserve Bank of Cleveland. We have begun discussions with the Chicago FDIC to develop a shared examination program with them.

I will continue to encourage increased cooperation among the Ohio Division of Banks, the FDIC, and the Federal Reserve Bank. I enthusiastically support Chairman Seidman's SAFE program. Sharing efforts helps all of us fulfill our supervisory responsibilities and benefits the entire banking system.

John F. Gayton
Superintendent
Ohio Division of Banks
Columbus, Ohio

Risk-Based Premium Plan Was Group Effort: White

To the Editor:

With regard to the story, "White's Plan for Risk-Based FSLIC Premium Draws Rapid Fire from Thrift Trade Group," by Jim McTague in the *American Banker* on Friday, April 8 [page 5]:

It is no secret that I have been an advocate of risk-sensitive deposit insurance premiums, and that an insured institution's net worth should be an important component of such a system. But, as I emphasized when your reporter telephoned on Tuesday, April 5, the proposal under consideration is the Bank Board's proposal, not "White's Plan." As I told him, the proposal was drafted by the Bank Board staff and has been shaped and influenced by the board. Unfortunately, Mr. McTague ignored this information in his story. And, since then, the board has unanimously voted to expose the proposal for public notice and comment.

The Genuine Admen Are More Responsible

To the Editor:

As a former bank marketing director, I heartily agree with the points made by Barry Deutsch in his article in the April 14 edition ("When the Admen Come to Call, Don't Play Ball," page 4). Why otherwise logical, hardheaded bank marketing people participated in some of the advertising travesties I was invited to join was a question I could never answer.

However, in my current position as account services director for a full-service advertising agency, I do have a slight quarrel with the article's headline.

Using the word "admen" to describe charity staff, chamber of commerce pitchmen, advertorial salesmen, and so on may be misleading, since to many people this term relates to ad agencies such as ours. And we would never recommend unjustifiable programs like these to our clients.

Hopefully, if more readers pay attention to Barry Deutsch's column, these programs will die a natural death. I, for one, couldn't be happier to attend the funeral.

Profitability Is Tough Case To Present to Customers

To the Editor,

Regarding the April 12 article by Sanford Rose; "Raising Branch Profitability" [page 1]:

While your article makes a valid point concerning the need for increasing awareness of bottom-line responsibility by branch management, try convincing customers that banks need to make a profit, too. Just like IBM!

Cheryl A. Panetta

Updated Rankings of Bank Credit Card Operations

Since the *American Banker* published its listings of the top banks in the bank card business on March 1 and March 3, additional banks have provided data about their bank card operations. Therefore, the newspaper is publishing revised rankings of the top bank card issuers and the top merchant banks for bank cards. ■

Top Merchant Banks for Credit Cards

Compiled by the American Banker

Ranked by merchant sites on Dec. 31, 1986 (of those responding to survey)

	Merchant Sites	Merchants
1. MBank USA, Wilmington, Del.	84,500	38,800
2. First National Bank of Louisville, Ky.	80,000	3,600
3. Citizens Fidelity Bank and Trust Co., Louisville, Ky.	71,000	31,000
4. Bank of America, San Francisco	NA	44,100
5. Rocky Mountain BankCard System Inc., Denver	NA	40,000
6. Security Pacific National Bank, Los Angeles	41,000	25,000
7. Mercantile Bank, St. Louis	39,000	3,000
8. Chemical Bank, New York	37,000	32,500
9. First National Bank of Atlanta	26,000	10,400
10. First Wisconsin National Bank of Milwaukee	NA	22,800
11. Corestates Bank of Delaware, Wilmington	23,000	15,000
12. NBD Bancorp, Detroit	21,200	19,700

The Daily Financial Services News

VOL. CLIII NO. 86 Tuesday, May 3, 1988 153rd Year

Today

A Pennsylvania congressman believes the Federal Asset Disposition Association is unconstitutional. Rep. Paul E. Kanjorski, one of several House Democrats seeking to abolish the association, is considering a court challenge to the controversial unit of the Bank Board. ______ 2

An investigation into what caused the collapse of Colorado's industrial banks is focusing on the failure of state examiners to detect and correct problems. The criticism is centered on an understaffed Colorado Division of Banking and Richard B. Doby, who resigned as the division's commissioner — a $58,000-a-year post — at the request of Gov. Roy Romer. __ 2

Legislation paving the way for the merger of Mercantile Bancorp. and Centerre Bancorp., both of St. Louis, is expected to reach Missouri Gov. John D. Ashcroft this week. Missouri law now restricts a bank holding company to a 13% share of all bank deposits in the state. The bill, which has passed both the House and the Senate, would expand the deposit base to include accounts at savings and loans and other federally insured financial institutions. ______ 2

Robert D. Mettlen, a former top official of the Federal Home Loan Bank of Dallas, reportedly has agreed to repay some $3,000 he received in 1985 for the sale of stock in Lamar Savings Association, Austin, Tex., an insolvent thrift. The agreement settles his part of a civil suit filed by current management that names 30 former officers and directors. ______ 2

Banca Commerciale Italiana reversed its position and increased the total value of its bid for Irving Bank Corp. The Milan-based bank said it would purchase about 51% of Irving's outstanding stock, up from its original offer of about 45%. ______ 3

The weekly listing of financial services stocks features regional industry groups and price indexes. __ 14

CORPORATE FINANCE

New Jersey bankers are enjoying a strong commercial loan market, and they expect a growth rate of about 9% to 10% this year. The lenders' primary targets are middle-market companies, including both smaller manufacturers and service firms, with annual sales ranging from $5 million to $500 million. ______ 6

Standard & Poor's is developing a credit rating system for leveraged buyout deals designed to provide investors with a more comprehensive package of financial information than a simple letter rating. ______ 6

Worth Repeating

This is too little too late. . . . I don't get the impression that BCI is all that anxious to own Irving.

Lawrence Cohn, who follows New York banking for Merrill Lynch & Co., on Banca Commerciale Italiana's higher bid. [Page 3]

Bankers Trust Paid Top Execs The Most in '87

Firm Had Top 6 Earners In US; Sanford Was No.1

By KENNETH J. HICKS

NEW YORK — Bankers Trust New York Corp. swept the top rankings in executive compensation in 1987, according to the *American Banker's* annual survey.

The money center bank not only moved into the top spot in total remuneration for its top two executives, but it also boasted the six highest-paid bankers in the United States.

On average, the company's top executives pulled down about $1 million in 1987, more than double the compensation of their counterparts at J.P. Morgan & Co., New York.

Meanwhile, several companies that suffered big losses last year fell to their lowest ranking in the 15 years the *American Banker* has been tracking remuneration at banking companies.

Overall, however, the 50 banking firms that pay their two highest executives the most have increased that compensation 4% since 1986. Nineteen of the companies listed in today's tables reported double-digit increases in executive compensation, though only seven had an increase in return on average equity from 1986.

These are some of the findings of the *American Banker*'s annual survey of remuneration of the two highest-paid officers at each of the 50 banking compa-

Random Thoughts

By SANFORD ROSE

Just a few short years ago, branch deposits were so valuable that expense levels could remain absurdly high. In 1981, the typical bank branch made a net interest margin plus fees equal to 10 cents per dollar of deposits. Otherwise stated, the branch could incur expenses — the cost of running the branch and processing its deposits — of just under 10% of deposits and still turn a profit: i.e., make a contribution to fixed overhead.

As interest rates fell, the credit for branch deposits dropped correspondingly, lowering the breakeven expense level. By 1986, the breakeven level of noninterest branch expenses had fallen from 10% to 3%.

➸ Continued from Page 1

With a drop in the earnings credit, branches had to generate many more deposits in order to remain cost effective. In 1981, branches that garnered as little as $1 million to $5 million in deposits were still economic. By 1986, the size of the cost-effective branch had increased to about $20 million to $25 million.

Now suppose interest rates start rising again — as many expect. Won't branch margins and breakeven expense levels also begin moving up, obviating the need for many branch closings and for draconian expense-reduction programs?

Not as much as some bankers think, says Booz-Allen & Hamilton. As rates increase, consumers will shift a higher percentage of funds from low- or no-interest accounts like DDAs, NOWs, and passbooks to more rate-sensitive vehicles, such as MMDAs.

The value of the remaining hoard of low-interest deposits will obviously increase, but the amount of these deposits will drop. Branch net interest margins will indeed rise, but only a little.

According to BAH projections, if the federal funds rate rises to 10% by 1990, branch margins will increase from 3% to just over 4%. This would lower the size of the cost-effective branch from, say, $21 million to around $10 million to $12 million. But some 40% of the nation's bank and thrift branches would still be nonviable.

Upshot: Retail executives can't look to rising rates to bail them out. Because of likely shifts in the deposit mix, the halcyon days of the early '80s will not recur. There is no alternative except to reconfigure branch networks and embark on thoroughgoing campaigns of branch rationalization.

□ □ □

The recently released ABA study of delivery system economics, authored by Booz-Allen, contains an intriguing section on ATM economics. The consultant stratifies ATM costs into three types: systemwide costs (costs that must be incurred to provide ATM services to customers, regardless of the number of ATMs); fixed costs (those that are incurred when an additional ATM is brought on line); and variable transaction costs (those that increase as more transactions are made via ATMs).

Systemwide costs include: customer service expenses (PINs and the cost of problems and complaints); Regulation E compliance staff; software maintenance and support; pro rata share of computer and telecommunications equipment expense; and card-issuing costs. At one bank, such costs totaled $69,600 a month, broken down into $36,800 for central support (salary and benefits for staff and supervisors), $9,800 for systems, and $23,000 for day-to-day operations.

Fixed costs vary by type of ATM and by local market conditions. For example, at one institution, BAH uncovered the following figures. An in-lobby ATM ran $840 per month, broken down into $450 for depreciation, $240 in balancing and loading expense, and $150 in telecommunications cost. A through-the-wall ATM cost $1,057 a month because of higher depreciation charges. And a free-standing ATM was the costliest, at $1,630.

Variable costs depend on whether there is an in-house processing capability or whether an outside service bureau is utilized. One bank with significant in-house processing capability had costs ranging from 10 to 20 cents per transaction. But an institution that used service bureaus bore a much higher cost — from 30 to 50 cents per transaction.

□ □ □

ATM costs must, of course, be compared with those of traditional paper-based teller transactions. But customers use ATMs and tellers differently, so it is necessary to make some adjustments in order to determine relative efficiencies. BAH developed certain ratios as a means of equalizing ATM and teller transactions. For example, if the average cash withdrawal from an ATM is $50 while that from a teller window is $200, then, everything else being equal, it takes four ATM cash withdrawals to replace one teller cash withdrawal.

Having made these adjustments, the consultant determined that, at one institution, tellers are more cost effective than in-lobby ATMs at transaction levels of under 9,500 per month. At transaction volumes of less than 2,900, tellers are cheaper than any type of ATM, but nonproprietary shared ATMs are cheaper than proprietary ones.

At intermediate transaction volumes (2,900 to 9,500), tellers are still the cheapest, but proprietary ATMs become more cost effective than nonproprietary machines. But when volumes exceed 9,500, proprietary ATMs have the lowest monthly cost, outstripping tellers and, of course, nonproprietary systems.

BAH found that some commercial banks have achieved breakeven ATM volumes through aggressive marketing and incentives. But in a sample of five banks, only two had an appreciable number of ATMs with monthly volumes in excess of a breakeven level of 9,500.

Savings and loans, which have fewer transaction accounts than banks, typically have small and suboptimal ATM volumes. Thus, in three surveyed associations, none had ATMs whose volumes even remotely approached the breakeven level.

Some banks, however, need many fewer than 9,500 monthly transactions to break even — outstrip teller performance. For example, at institutions with highly efficient in-house processing capabilities (costs of about 15 cents per transaction), in-lobby ATMs bearing monthly fixed costs of as much as $1,800 may be more cost effective than tellers at transaction volumes of only 5,000 to 6,000. On the other hand, institutions employing service bureaus that charge, say, 40 cents per transaction may find that the cost lines converge only at astronomical volumes — i.e., in-lobby ATMs are almost never more efficient than teller transactions.

In the case of free-standing machines, fixed costs are often decisive. When monthly lease payments are relatively high, reflecting, say, the elevated cost of land, free-standing machines rarely cut the mustard. Given fixed monthly costs of between $3,000 and $4,000, such machines were found to be less cost effective than tellers at transaction volumes of under 12,000 or 13,000 — even for banks whose marginal processing cost was only about 15 cents.

Of course, whether machines beat tellers also depends to a large degree on the bank's salary level and on the nature of ATM transactions. Where teller compensation is high and there is a close equivalence (substitutability) between machine and teller transactions, ATMs may indeed prove viable at quite modest transaction volumes.

Thus, in one analysis which assumed, among other things, that (1) machines bore a fixed monthly cost of $750, (2) 80% of ATM transactions replaced teller transactions, and (3) tellers earned $25,000 a year in salary and benefits, machines were more cost effective than tellers at monthly volumes of 5,000. But if the tellers made $20,000, the same machines became economic only when ATM transaction volumes neared 10,000. And assuming teller salaries of $15,000, such machines were uneconomic even at transaction volumes of 15,000.

□ □ □

BAH finds that ATM volumes can be predicted based on neighborhood demographics and machine availability, which together explain 83% of the variation in machine activity across neighborhoods. Neighborhoods that contain large populations of people aged 20-34 are obviously the logical places to concentrate ATM installations.

Consider a neighborhood that contains 25,000 people aged 20-34 and 20 ATMs. Monthly transaction volume is estimated at 100,000, or 5,000 per machine. If the same neighborhood had only 10 ATMs, volume is projected to be 60,000, or 6,000 per machine. Thus, by analyzing its breakeven transaction levels and local market conditions, a bank can determine with a fair degree of accuracy whether a given area will support additional machine installations.

□ □ □

The ABA-BAH study offers a fascinating glimpse of the slippery world of ATM economics. Numerical analysis is treacherous because of the wide variance from the alleged averages.

Fixed monthly costs for in-lobby machines can vary by as much as $1,000 or more. As noted, marginal processing costs also range quite widely, depending on the extent of in-house processing capabilities.

Nonetheless it appears that, whatever the applicable numbers, a significant number of ATM installations are not currently cost effective — that is, they are less efficient than traditional paper-based teller systems.

To be sure, the decision on whether to invest in ATMs must be based on more than a simple numbers calculation. ATMs, emphasizes Booz-Allen, must be evaluated as part of an overall marketing strategy. As many banks have discovered, there may be a defensive justification for ATMs, since, without them, the bank could lose deposits to competitors that provide the service.

Still, some numerical exercises are essential. Banks must estimate how many deposits would be lost and the worth of these foregone funds. In justifying a strategy that targets younger customers, who are more likely to use an ATM, institutions must ask themselves whether the accounts are valuable now or only later. And if the accounts are not now profitable, banks must determine what current losses are justified in order to hold on to these customers until the relationships become profitable. ■

Executive remuneration, as defined by American Banker, is total compensation — whether current or deferred — paid or credited for services during 1987 to the two highest paid officers of the organization. **Included are the following:** salary, bonus and incentive payments, profit sharing, and all other remuneration such as insurance premiums, club membership fees, and tax service fees paid by the corporation for the executive. **Excluded are the following:** pension plan payments; retirement plan payments or accruals; stock options exercised; stock appreciation rights; and contingent long-term bonus payments which are based on the company's performance for a period greater than one year. The American Banker ranking is based on total remuneration paid to the top two executives of the company. The corporation's rankings for both 1987 and 1986 are shown to the left of the corporation's name. Total remuneration for the top two executives, for both 1987 and 1986, is reported to the nearest dollar in the column entitled **"Top Executive Remuneration"**. The compensation paid for executives number one and number two for both 1987 and 1986 appear in the column entitled **"Individual Remuneration."** All footnotes that are relevant to the compensation figures reported for each executive— except those dealing with long-term incentive awards— appear in the column labeled **"Notes"**. Footnotes which refer to 1987 data are capitalized and footnotes referring to 1986 data are lower case. The titles shown for the executives are those for which they received compensation, excluding directorships. **Title abbreviations:** CAO— Chief Accounting Officer; CEO— Chief Executive Officer; CEx— Chairman of the Executive Committee; CFO— Chief Financial Officer; CLO— Chief Lending Officer; Ch— Chairman of the Board; CM— Chairman of the Management Committee; COO— Chief Operating Officer; DCh— Deputy Chairman of the Board; EVP— Executive Vice President; HC— Holding Company; Pr— President; Sec— Secretary; SE— Sector Executive; SEVP—Senior Executive Vice President; SrCh—Senior Vice Chairman of the Board; Tr— Treasurer; VC— Vice Chairman; and VP— Vice President. **NOTES: G,g—** Includes latest salary during the year, at an annual rate, for an officer hired or promoted during the year. **H,h—** Also received a bonus in stock. **P,p—** Includes salary at an annual rate for an officer who left the firm or retired during the year. **R,r—** Also granted stock options. **T,t—** Stock options exercised during the year. **V,v—** Includes cash value of award in stock. Footnotes dealing with long-term compensation appear immediately after the compensation figure reported for each executive. **(†)—** Long-term compensation is included in the remuneration total reported to American Banker by the banking firm, who was unable or unwilling to remove that component from the total. **‡—** Includes dividends on stock received under long-term incentive plan. **(*)—** Executive also received a long-term cash compensation award, which is not included in the remuneration total shown. **(#)—** On 1/1/88, Fleet Financial Group, Inc., Providence, R.I., and Norstar Bancorp., Albany, N.Y., merged to form Fleet/Norstar.

Footnotes: American Banker surveyed the top 200 banking firms in the U.S. this year to rank the 80 largest banking firms in remuneration paid their two highest paid officers in 1987. In 1986, only the top 100 firms were surveyed to rank the 70 largest banking firms in remuneration paid their two highest paid officers in 1986. Please note that four major banking firms did not participate in this year's survey. They are: Manufacturers National Corp., Detroit, which ranked 53d in 1986 with $952,575 paid to its two highest paid officers; First Fidelity Bancorp., Newark, N.J., which ranked 37th in 1986 with $1,118,648 paid to its two highest paid officers; AmeriTrust Corp., Clevland, which ranked 62d with $871,320; and First RepublicBank Corp., Dallas, which was 57th with $916,942 in 1986.

Bankers Trust Tops List of High-Paying Bank Companies

➻ Continued from Page 1

nies that pay executives the most.

Executive remuneration, as defined by the *American Banker*, is total compensation — whether current or deferred — paid or credited for services during 1987 to the two highest-paid officers of the company. Included are salary, bonus and incentive payments, profit sharing, and all other remuneration related to 1987 services, as identified on proxy statements. Excluded are pension plan payments, retirement plan payments or accruals, stock options exercised, stock appreciation rights, and contingent, long-term bonus payments.

Charles S. Sanford Jr. and Philip M. Hampton — chairman and vice chairman, respectively, of Bankers Trust — were paid a combined $3.1 million for their services in 1987, a 26.5% increase over the previous year's total. Mr. Sanford took over as chairman last July, when Alfred Brittain 3d retired from that position. Mr. Brittain had been chairman of Bankers Trust since 1975.

Bankers Trust has been paying steadily more to compensate its two top executives since 1982, when it ranked eighth. Last year marked the first time the New York money center bank occupied the top spot, which had been held by J.P. Morgan since 1984. Further, Mr. Sanford's 52.2% raise to $1.8 million made him the highest-paid banker in the United States. Vice chairman Hampton occupied the No. 2, with $1.4 million in compensation, and was followed by four of the company's executive vice presidents: Edward A. Lesser, Ralph L. MacDonald Jr., Eugene B. Shanks Jr., and George J. Vojta. Each of the four was paid $1.3 million last year.

Lewis T. Preston, chairman of Morgan, who had been the highest-paid banker since 1984, was the seventh highest paid banker in the country last year. Mr. Preston's remuneration totaled $1.3 million, a decrease of 13.4% from $1.5 million in 1986. The rest of the top 10 bankers are: Carl E. Reichardt, chairman of Wells Fargo & Co., San Francisco; Lloyd P. Johnson, chairman, president, and chief executive officer of Norwest Corp., Minneapolis; and Willard C. Butcher, chairman and chief executive officer of Chase Manhattan Corp.

Total at Bankers Trust Up 41.4%

Total employee pay and benefits at Bankers Trust were up 41.4% in 1987. In fact, Bankers Trust had the much publicized distinction of paying its top foreign currency trader more than $2 million in salary and bonuses last year.

Bankers Trust: Page 16 ➻

The right to use this symbol means a lot to 2000 accounting firms. And their clients.

For starters, not every accounting firm can put it on their letterhead.

It's not just another designation for a professional organization.

Members of the AICPA Division for CPA Firms have to earn their membership. They participate in a proven program of learning, growth and shared excellence.

For 10 years, these firms have been willing to make an honest effort of self-help and cooperation. They have pioneered the application of new professional standards... standards similar to those recently voted in by individual AICPA members.

And what do their clients get?

They get a firm that can keep up with the times. With all the new laws, new regulations and new ways of dealing with problems. In short, they get a firm committed to being the best it can be.

To learn more about the firms that earn this symbol, call 1-800-CPA-FIRM. In New York State call 212-575-6446.

Bankers Trust Leads Pack in Executive Compensation

➡ Continued from Page 11

The trader, Andrew Kreiger, left Bankers Trust in February.

Though Mr. Kreiger's 1987 compensation exceeded that of the chairman, observers note that it is a growing practice to reward experts and specialists for their performance. In the fourth quarter of 1987, Bankers Trust earned almost $340 million in pretax dollars in currency trading.

From 1986 to 1987, remuneration to the top two executives of the 50 banking companies increased 4.4%. Last year, these companies paid the executives a combined $69.6 million, versus $66.7 million in 1986. (First Fidelity Bancorp., Newark, N.J., and Manufacturers National Corp., Detroit, which ranked 37 and 53 respectively in 1986, were unable to provide compensation data for 1987.)

Of the 19 banking companies reporting double-digit increases for their top two executives, 13 were superregionals. At those firms, remuneration for the top two executives was up 22.1%. Half of the 50 banking companies listed today are superregionals, with 15 of those in the top 25.

Louis Brindisi Jr., practice director of the New York office of the Management Compensation Group, Los Angeles, believes the superregional banking companies' entry into and dominance of the listing is directly related to "the superregionals performing better" than many of the money center banks.

Also, Mr. Brindisi points out, the capitalization of the superregionals is approaching that of the big banks. He expects the gap between money center and the superregional executive pay scales to narrow in the future.

The Management Compensation Group fashions total compensation strategies for companies to maximize shareholder profit. The firm has offices in New York, Chicago, and Washington.

Among the companies that fell to their lowest levels in executive remuneration was Manufacturers Hanover Corp., New York, which dropped to 18th from 9th place in 1986. The company's top two executives took a 10.6% decrease in compensation, to $1.4 million.

Citicorp plummeted to 19 in 1987 from from the No. 3 spot in 1986. The top two officers of the nation's largest banking company took a 31.9% cut in compensation, to $1.4 million. Irving Bank Corp., New York, fell to 25 from 10, reducing its top officers' compensation 12.7%. Chemical New York Corp. fell to 41 in 1987 from 19 the previous year. Chemical's top two officers saw their compensation fall 12.8%, to $1.1 million.

Other Survey Findings

- Companies that dropped out of the top 50 banking companies in executive compensation are: Union Bancorp., Los Angeles, to 52 from 24; Marine Midland Banks Inc., Buffalo, to 59 from 30; NCNB Corp., Charlotte, N.C., to 80 from 43; Signet Banking Corp., Richmond, Va., to 73 from 44; and Indiana National Corp., Indianapolis, to 78 from 48.
- Ten of the companies listed today reported a new second-in-command. Sixty-eight of the 100 officers shown in the tables were granted stock options in 1987, and 38 exercised stock options last year.
- Because some information was received too late to be included in today's survey, Norwest Corp., ranked No. 3, should show total compensation for its top two executives of $2.1 million, up 24.5%. The second highest paid executive should be Richard S. Levitt, vice chairman and chief operating officer of the specialized financial group. Mr. Levitt's 1987 remuneration totaled $1 million, an increase of 12.9% from the previous year. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our salary tables meet your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

(1.) How would you **change** the tables to make them more useful? What would you add?

(2.) What do you like **best** about the tables?

(3.) What do you like **least** about them?

Financing Corp. Bonds Qualify for AAA Portfolio

WASHINGTON — Standard & Poor's Corp. has determined that bonds issued by the Financing Corp., or Fico, qualify as eligible investments for AAA-rated financings.

This means that a triple-A portfolio will not be adversely affected by the addition of Fico bonds.

Congress authorized Fico last year to issue $10.8 billion in bonds to recapitalize the Federal Savings and Loan Insurance Corp.

S&P said it believes that, in a worst-case scenario, Congress would guarantee payment of Fico bond interest. Principal on the Fico bonds is secured by zero coupon Treasury bonds. ■

Deregulation has made today's banking and financial services industry more diversified and competitive than ever before. The premier publication in the industry is meeting its changing needs. *The Bankers Magazine*—reporting on the new realities.

It's by and for bankers. Now we give you wider and more in-depth coverage than ever before. That's because *The Bankers Magazine* is written by the people who are changing the face of banking. You'll learn from their strategies and successes—and their cautionary tales. And our distinguished Board of Advisers, drawn from financial institutions large and small, ensures a balanced outlook that's of interest to everyone.

Theme issues analyze crucial topics. We devote a good part of each magazine to a single theme, such as the national expansion of interstate banking…the new competition from nonbanks…and what's really needed for effective strategic planning. Coverage from all the angles gives *you* a broad working knowledge you can't afford to be without.

Quick-reading, hard-hitting columns keep you informed. Look to *The Bankers Magazine* for the latest on strategy, operations and technology, marketing, and all the key areas that affect the big picture.

Send for the first issue at no risk and experience the new perspective for yourself!

The Bankers Magazine

The industry-wide perspective you can't get anywhere else.

Banks in France have won the lion's share of the business created by a successful new retirement savings product. ——— 2

Financial Corporation of America posted a first-quarter loss of $63.2 million and said regulatory capital was exhausted at its American Savings and Loan Association subsidiary. ——— 2

The Fed has slightly extended banks' authority to combine investment advice with brokerage services in its approval of an application by Sovran Financial Corp., Norfolk, Va. The holding company received permission to move its financial services group from its bank subsidiary to its investment banking and brokerage arm. 2

Centerre Bancorp., St. Louis, said it received a "friendly merger" offer from Boatmen's Bancshares Inc. for a price of $50 per share. ——— 3

The failure of federal prosecutors to win convictions in the Continental Illinois trial is a disappointment but not a fatal setback in the government's attempts to deter bank fraud. ——— 3

Rep. Gerald D. Kleczka, D-Wis., plans to introduce legislation to protect the right of states to authorize insurance powers for their state-chartered banks. ——— 3

Lewis S. Ranieri, the man who drew the blueprint for the $650 billion mortgage-backed securities market, says he sees some cracks in the foundation. ——— 18

Moore Financial Group is aiming for growth of almost 43% in the next three to five years. The Boise, Idaho-based bank company, with $3.5 billion in assets, is branching out in the western states, most recently acquiring Western Bank Holding Co., Bellevue, Wash., for $4.1 million. ——— 24

Executive Changes ——— 22

Regional Bank Earnings ——— 14

CONSUMER FINANCIAL SERVICES

Consumers soon may be able to pick up the phone, dial a 700 number, and receive financial information ranging from stock market quotes to rates on bank loans. ——— 8

A boom in credit card delinquencies has led to a surge in business for debt collection agencies. ——— 8

Marketers have been saying for 20 years that banks need to focus on sales and service, James Donnelly writes. But there are only three ways to persuade bankers to change — through power, reason, or reeducation. ——— 4

Worth Repeating

The stock has just sat there for a month. I've got it rated as aggressively as I can rate it.

J. Richard Fredericks, analyst for Montgomery Securities in San Francisco, on J.P. Morgan & Co's stock price. [Page 1]

PROFILE

I like managing my own shop. I like working with people. And I love the bottom-line discipline.

— Karen Horn
Chairman and Chief Executive Officer
Bank One Cleveland

Horn Finds Plenty of Rewards As Head of Bank One Cleveland

By LISABETH WEINER
Midwest Bureau

CLEVELAND — Karen Horn wanted to stop making policy and start making profits. So after five years as head of the Federal Reserve Bank of Cleveland, she became chairman and chief executive officer of the $1.5 billion-asset Bank One Cleveland.

"I wanted to return to the private sector," Mrs. Horn says. "I chose to be a manager of a company. That's what I want to do."

But Mrs. Horn's job switch in April 1987 startled some members of the banking community. Even though her salary reportedly now tops $200,000 — up from $135,000 at the Fed — colleagues view her position as less prestigious and less powerful.

As the only woman ever to be president of a Federal Reserve Bank and as one of only two women in the country to head a commercial bank with assets of $1 billion or more, she certainly is a member of an elite group. The largest bank in the United States headed by a woman is Equibank, Pittsburgh, whose chairman and chief executive officer is Claire W. Gargalli.

Although the Cleveland bank, with deposits of $1.2 billion and 47 offices in the metropolitan area, is a stellar performer, it is a small fish in a big pond. In a market of six major players, it ranks fourth.

Competitors have questioned whether Mrs. Horn took the job with the intention of assuming a board position at the holding company at a future date. "There have been absolutely no promises made," says Banc One Corp. chairman John McCoy.

Just What She Wants

At least for now, Mrs. Horn has what she wants: a line job. "My interest now is in managing a commercial bank. I loved making policy; it was terribly stimulating," she says. "But I like managing my own shop. I like working with people. And I love the bottom-line discipline."

The 44-year-old is getting her chance to do all those things at Bank One Cleveland, which is part of a $23 billion-asset superregional bank holding company. Firmly ensconced in In-

Morgan Stock Languishes as Others Gain

By PHILIP T. SUDO

NEW YORK — Call it curious or chalk it up to market unpredictability, but nearly every major bank stock has gained in value this year — except that of J.P. Morgan & Co.

Analysts say there is no single explanation for why Morgan's stock has continued to lose ground through the first four months of the year. From Jan. 1 through May 2, the stock dropped 14.8% — the sharpest decline among major banking companies, excluding the troubled First RepublicBank Corp., Dallas. By contrast, the top 50 bank stocks gained 10.7% over the same period.

Monday marked a new low for 1988. The issue closed at $30.875, only $3.875 above its 52-week bottom. (By late Wednesday, the issue was trading at $31.25.)

"It's out of whack — I can't understand it," said J. Richard Fredericks, an analyst for Montgomery Securities in San Francisco. "The stock has just sat there for a month. I've got it rated as aggressively as I can rate it."

James McDermott, senior analyst for Keefe Bruyette & Woods Inc., put it more succinctly: "The stock has acted like death."

Exactly why is a question "of great concern to us," said Carol Hallingby, vice president of investor relations at Morgan. "We've called our traders, they've called around — they couldn't find anything."

Many analysts say Morgan does too little to publicize its numerous strengths, that its traditionally low profile has allowed a string of unfavorable news stories to cast the firm in an unfairly negative light.

"They're competing in a much more

French Banks Beat Insurance Companies at Their Own Game

Gallic Consumers Favor Traditional Relationships

By LINDA K.S. MOORE

PARIS — Since the beginning of the year, the insurance office down the street has been selling a new retirement savings instrument; so has the bank on the corner.

Both are benefiting from new legislation in France intended to equalize the competition between financial service institutions and insurance companies.

The retirement fund is known as a PER, for *Plan d'Epargne en vue de la Retraite* (savings plan for future retirement). It provides significant tax benefits on investments made in life insurance policies and money market funds if the PER is held until retirement age.

The customer can choose a PER based entirely on life insurance, entirely on financial instruments, or on a combination of the two. The plans were an immediate success, but the lion's share of the new market has gone to the banks rather than the insurance companies. All types of financial institutions in France are permitted to sell insurance through affiliated companies, and they have been doing so since the 1950s.

These companies have concentrated on life insurance, particularly whole life insurance. Whole life insurance fits nicely with the banks' traditional businesses and is also less costly to administer than other types of insurance. Only one bank-owned insurance company sells auto insurance, for example.

"The average French consumer prefers to buy insurance from a bank," said Patrick Sailly, a representative of the French Federation of Insurance Companies.

Source L'Argus Journal Internationale des Assurances, Paris.

The banks benefit from a better image — insurance companies are widely perceived as tricking customers with misleading fine print on contracts, Mr. Sailly said in an interview. The banks also trade on their tradition of "relationship banking."

The post office banking system has been selling insurance for the government-operated *Caisse des Depots et Consignations* since 1959. According to a former postal employee, the system prides itself on the tax and retirement planning advice it offers at the post office counter.

Large commercial banks began entering the insurance business in the 1970s. The pace has accelerated since then, with most banks doubling or tripling their annual revenue from insurance sales in the last five years. The banks sell insurance from their branches and through direct marketing.

And they do a better job than the insurance companies, according to a senior marketing official at *Banque Nationale de Paris,* France's largest commercial bank.

Insurance companies now account for barely 60% of annual life insurance policy revenue in France. The banks account for about 30% and cooperative associations hold the balance.

The banks' presence in the domestic market is stronger than these figures suggest, since the insurance company statistics include policies sold worldwide, while the banks operate almost exclusively in France.

The 1986 statistics recently released by Mr. Sailly show that policy premium income for bank-owned insurance companies increased 36.5% over 1985. Mr. Sailly predicts that by year-end 1988, traditional insurance companies will hold less than half the market for life insurance sales in France. ■

FCA Loses $63.2 Million; Thrift Unit Reports Regulatory Capital Deficit

By ROBERT LUKE
West Coast Bureau

LOS ANGELES — The Financial Corporation of America, reporting a first-quarter loss of $63.2 million, said regulatory capital was exhausted at its subsidiary, American Savings and Loan Association.

American Savings, based in Stockton, Calif., had $69.2 million in regulatory capital on Dec. 31, but reported a deficit of $9.3 million at the end of the first quarter.

A year earlier, Financial Corp., based in Irvine, Calif., earned $9.2 million, or 17 cents a share. The holding company lost $468 million in all of 1987, wiping out its net worth.

The Federal Home Loan Bank Board currently is negotiating the sale of American Savings to a group headed by Texas investor Robert M. Bass. The Bank Board will not disclose details of the talks, however, and has been reluctant to provide documents on Financial Corp. to the House Banking Committee, which is investigating the agency's handling of the company's problems.

That reluctance prompted committee Chairman Fernand St Germain, D-R.I., this week to denounce the agency for "stonewalling" the three-month-old investigation.

A Bank Board spokesman said on Wednesday that the agency would provide documents to the committee, but only after its staff has reviewed the papers to ensure that information disclosed in them will not put the Bass deal at risk.

"The Basses are sensitive to publicity, and we don't want to jeopardize the deal," said Bank Board spokesman Karl Hoyle. "I understand Mr. St Germain's frustration."

Financial Corp. said its operating loss widened in the first quarter to $27.4 million, from $17.3 million a year earlier, but declined from $48.5 million in the 1987 fourth quarter.

The company said it boosted its reserve for losses on loans and real estate by $107 million in the quarter, bringing the total reserve to $1.2 billion.

The holding company realized a gain of $49.2 million on the sale of mortgage-backed securities and said it used proceeds from the sale to reduce short-term debt with Wall Street firms. The Bank Board had earlier ordered the company the reduce its holdings of such securities, which totaled nearly $16 billion at March 31.

> The Bank Board has been reluctant to provide documents to the House Banking Committee.

The company's exposure to rising interest rates grew during the period from the year earlier. Financial's one-year negative gap, a measurement of interest-rate risk, rose to 40.9% in the quarter from 24% a year earlier.

Financial Corp., which reported assets of $30.6 billion, said it sold $132.6 million in foreclosed real estate during the quarter, bringing total sales to nearly $2 billion since 1985. ■

Fed Approval of Sovran Application Expands Banks Advisory Powers

By JED HOROWITZ

Investment Banking

NEW YORK — The Federal Reserve Board, approving an application by Sovran Financial Corp., has slightly expanded the authority of banks to combine investment advice with brokerage services.

The Fed, in its unanimous decision on Tuesday, ruled that Sovran's subsidiary banks may provide customer lists and confidential financial information to help its investment banking arm make credit decisions on particular customers. Sovran promised it would do so only with the customer's prior consent.

The expanded authority was incorporated in approval of the Norfolk bank company's application to move its financial services group from its Sovran Bank subsidiary to Sovran Investment Corp., its investment banking and brokerage arm. The financial services group often gives its institutional and corporate customers nonfee investment advice on buying or selling commercial paper, collateralized mortgage obligations, money market preferred stock, and other securities.

The Fed ruled in 1986 that banks can offer investment advice and brokerage services under one roof without violating the Glass-Steagall Act's prohibition against underwriting. The Securities Industry Association unsuccessfully fought the Fed ruling in court. However, the Fed imposed various restrictions to ensure that the brokerage and banking activities of the parent company do not unduly influence each other.

In addition to limits on cross-marketing, the Fed restricts directors and officers of affiliate banks from serving in similar positions at the investment bank, a so-called management interlock ban. It also requires that all buy and sell notices and advertisements disclose that the investment bank is a separate corporation from other holding company affiliates.

The $14.6 billion-asset Sovran tried to ameliorate the managment interlock ban, arguing that regional banks are at a disadvantage because they must draw their directors and officers from a smaller pool of experts. However, according to an attorney close to the bank, the Fed was adamant about keeping the ban.

The Fed took more than a year to render a decision on the Sovran application.

Sovran's application said that it will offer advisory services only to corporate or institutional customers, although it did not suggest a net worth limit to define these terms. The Fed is considering an application from the Bank of New England that would push the law one step further by allowing a bank to combine investment advice and securities brokerage for small, retail investors.

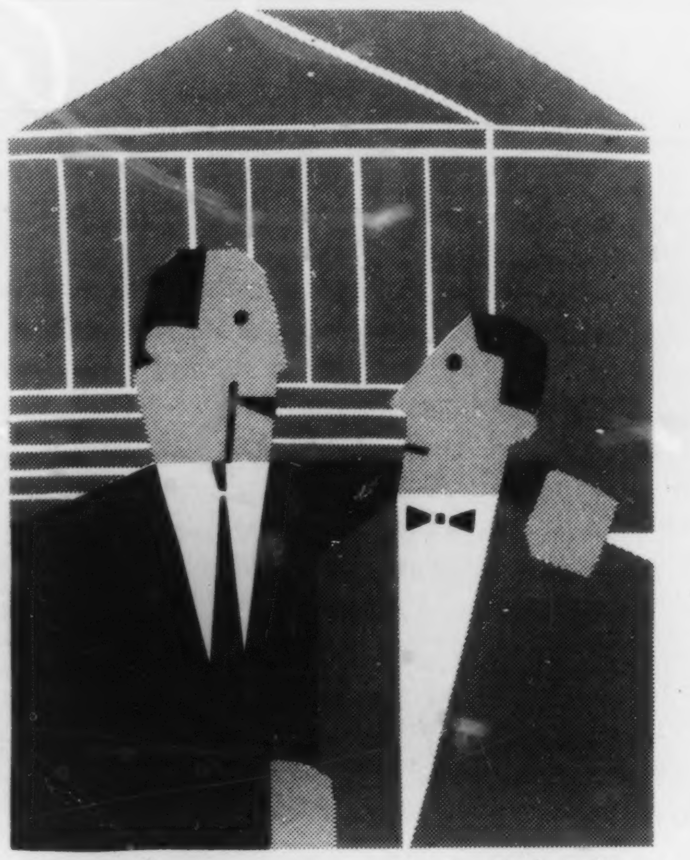
MARKETING MANAGEMENT

Persuading Bankers to Change with the Times

By JAMES DONNELLY

My library contains published proceedings from several industry marketing conventions that took place in the late 1960s and early 1970s. In those days the speeches and presentations were often bound and sold as a volume. It is very enlightening to review these volumes occasionally; they tell me how far we haven't come.

In a 1969 volume are numerous presentations encouraging bankers to become more customer oriented and market driven in their product development efforts. In 1971 we were emphasizing the need to improve service to customers. In 1972 a series of presentations urged banks to become "sales organizations." It occurred to me that if I changed "service to customers" to "service quality" and "sales organizations" to "sales cultures," all of the presentations could have been given at any major convention in 1988.



Joshua Shrier

The theme then and now among many marketers seems to be that the solution to our problems is that bankers and banks must change. They must change to become more customer oriented, market driven, sales oriented, service oriented, etcetera. We have always viewed change as the solution.

As I looked over the brown-around-the-edges speeches from 1970, I couldn't help but think that while some progress has certainly been made, we bank marketers are either decades ahead of everyone else, talking to ourselves, preaching to the converted, or we need to focus our energies in another direction.

I think it may be the latter. I propose that changing bankers and banks is not the solution, it is the problem. Managing change is the solution and it is here that we should focus our energies.

Getting People to Change

How do you get people to change? It seems to me that there are only three ways, and two of them have apparently not worked very well. One extreme is the application of power, the other extreme is the application of reason. Midway between these two extremes is an approach that relies on reeducation.

Using power implies the use of coercion. Bank managers can use their power to coerce everyone else to change in the direction they desire. They can implement power through their control over rewards and sanctions. They determine the conditions of employment, including promotion and advancement.

But except in a crisis, when the very existence of the bank is at stake, power has not been successful in bringing about the changes needed in the new world of banking. Power cannot make people sell, develop innovative products, or give their all for customer service.

Reason alone has not been sufficient to bring about change, either. The fact that we marketers are saying the same things we said 20 years ago is evidence that the application of reason has not brought about change in most banks. Despite all the articles, exhortations, and speeches, reason has not prevailed.

If we agree that people won't change just because someone tells them to — power — or asks them to — reason — then it seems to me that the middle ground is the only approach left. Once we accept that changing bankers and the bank is not the solution but the problem, we can focus attention on strategies for producing and managing change. We need a formal approach to reeducation and implementing the process of change.

Organizational Development

A management technique known as organizational development has an excellent record of success in helping organizations, including some banks, adapt to change. Organizational development is a planned, managed, systematic process to change the culture, systems, and behavior of an organization. Its purpose is to change attitudes and values of employees, modify behavior, and induce change in organizational structure and policies. It is a formal approach to reeducation and managing change.

However, before organizational development or similar approaches can be successful in banking, two things must occur. First, management must recognize that the inability to change is a problem for the bank and the use of power and reason have not brought about many of the needed changes. Second, management must face the issue of who will be the catalyst for change, the "change agent."

This question is an important one. Are agents of change necessary for organizational development to take place? If we recognize that organizational development involves changes in the way people think, behave, and act, and because there is a tendency to seek answers in traditional solutions, we can appreciate the necessity of someone to play the role of change agent.

But who? Existing managers? New managers? Or someone hired specifically for the purpose? Depending on

LETTERS TO THE EDITOR

Bank Librarians Provide Vital Services

To the Editor:

I recently read with great disappointment, Paul Nadler's article, "Reading Can Enrich the Bank's Young Blood," in the April 18 issue of the *American Banker* [page 4].

In his article he suggests that someone "like a librarian" keep a file of publications for bank executives to read. Many bank information centers already provide this vital and valuable service to the bank's staff. These information professionals gather, summarize, and disseminate this type of information in a systematic, formalized routine to keep the bank's decision makers informed.

The banking world's information professionals (librarians) are among the finest the profession has to offer. These professionals are continually developing new and more efficient ways to collect and distribute information needed for effective decision making. Additionally, they regularly evaluate the services provided to clients to ensure that their information services are meeting the needs of users.

The Special Libraries Association is an international professional association of more than 12,000 members. More than 2,500 of our members are found in the business and finance world and provide the information edge to banks and related financial institutions.

Mr. Nadler is correct in his assertion that reading is important. He has overlooked the very important first stop — the bank's information center and the professionals who manage information.

FLASHBACKS

What made news in the *American Banker* this week...

40 Years Ago

- The total value of guaranteed loans to veterans under the G.I. Bill topped $7 billion, according to the Veterans Administration. The agency said 1.29 million veterans had borrowed money under the program. Home loans accounted for $6.66 billion of the funds, business loans represented $291 million, and farm loans totaled $170 million.
- The U.S. Supreme Court struck down real estate agreements as being in violation of the equal protection provision of the 14th Amendment. The ruling invalidated eviction orders against blacks who purchased homes in "covananted," or restricted neighborhoods in St. Louis and Detroit. The eviction orders had been upheld by lower courts.

20 Years Ago

- The House passed a bill to compel federal regulators to set minimum requirements for security at financial institutions. The bill would require standards covering installation, maintenance, and operation of security devices.
- The Supreme Court let stand a lower court decision limiting the scope of court review of decisions by the Comptroller of the Currency on applications for national banking charters. The court denied a petition of Citizens Bank, Hattiesburg, Miss., for review of a Fifth Circuit Court of Appeals ruling that upheld the comptroller's approval of a charter for Southern National Bank, Hattiesburg.

10 Years Ago

- The Federal Reserve Board unanimously approved a regulation allowing member banks to arrange automatic funds transfers between customer savings and checking accounts. The American Bankers Association welcomed the decision.
- Japanese Prime Minister Takeo Fukuda called for greater international efforts to ease the burdens of poor countries and pledged a significant increase in his nation's foreign aid. He also proposed that Japan and the United States consider establishing a joint fund to advance cooperation between the two countries in science and technology, and he reaffirmed his government's determination to boost domestic economic growth. He provided no details, however, on how Japan would accomplish that.

5 Years Ago

- Senate Banking Committee Chairman Jake Garn, R-Utah, said it was unlikely that Congress would impose a moratorium on applications by nonbanking firms to charter banks. Federal Reserve Board Chairman Paul A. Volcker had urged Congress to block temporarily state and federal actions that allowed other types of financial service providers to expand beyond their traditional businesses. Mr. Volcker also asked Congress to impose a moratorium on bank and thrift combinations with nondepository institutions.

1 Year Ago

- The House of Representatives approved a $5 billion rescue plan for the Federal Savings and Loan Insurance Corp., rejecting a Treasury Department proposal to permit the FSLIC to raise up to $15 billion over five years.
- A bill that would limit bank check holds cleared the House of Representatives. The bill would require the Federal Reserve to adopt regulations within three years of enactment to limit holds to one day for local items and four days for out-of-town checks. During the first three years, a less stringent schedule would apply.
- The Federal Reserve Board approved bids by Citicorp, Bankers Trust New York Corp., and J.P. Morgan & Co. to underwrite and deal in commercial paper, municipal revenue bonds, mortgage-related securities, and — with the exception of Morgan — securities backed by consumer-related receivables. But the Fed imposed severe restraints on the banks' underwriting volume.

Irving to Pay Italian Bank's Bid Expenses

'No-Risk' Deal Includes Reimbursement for Ads

By BART FRAUST

NEW YORK — Irving Bank Corp. has agreed to reimburse Banca Commerciale Italiana for advertising, investment banking, legal, and other out-of-pocket expenses resulting from the Italian bank's friendly tender offer.

Patricia Skiggen, Banca Commerciale's New York attorney, said the Milan-based bank negotiated the reimbursement when it agreed last month to increase its offer to $75 a share from the original $65.

Banca Commerciale will be reimbursed whether its bid succeeds or fails. "It's a no-risk situation," one investment banker said.

For the past seven months, Irving has been fighting a hostile takeover by the Bank of New York. The battle is expected to come to a head today at Irving's annual meeting. Irving shareholders are expected to vote on a Bank of New York proxy bid to elect a slate of 16 Irving directors.

The reimbursement provision is contained in filings the two companies made with the Securities and Exchange Commission. "The agreement provides that the company [Irving] will reimburse the purchaser for its and its subsidiaries' reasonable actual out-of-pocket expenses incurred in connection with the agreement and the transactions contemplated thereby and by the business plan, including, but not limited to, the fees and expenses of its counsel and financial advisers, provided that the purchaser is not in material

Commercial Loans Loom Larger At Top 100 Savings Institutions

By KENNETH J. HICKS

NEW YORK — After breezing along with huge commercial loan growth over the previous two years, the top 100 thrifts posted a moderate 10% rise in such loans for 1987. While gross operating income barely budged last year, interest on commercial loans was up almost 30%.

These are among the findings of the *American Banker*'s third annual survey of commercial lending at top thrift institutions. All data were taken from the quarterly financial reports submitted to the Federal Home Loan Bank Board.

All thrifts insured by the Federal Savings and Loan Insurance Corp. are included, while most thrifts insured by the Federal Deposit Insurance Corp. are excluded. Rankings were provided by ADP Data Services, New York, from its computer tape of the Bank Board data base.

Commercial loans, as defined by the Bank Board, include all secured loans on commercial properties that do not qualify as mortgage loans. Included are loans for automobiles or mobile homes.

Boatmen's Favored over Mercantile In Bidding Competition for Centerre

By ANDREA BENNETT
Midwest Bureau

CHICAGO — Mercantile Bancorp. will have a hard time matching the $50 a share that Boatmen's Bancshares Inc. has offered for Centerre Bancorp., and Mercantile is likely to have difficulty winning shareholder approval for its original merger-of-equals agreement with Centerre, analysts said on Thursday.

Boatmen's offer for Centerre is valued at about $390 million, well above the $278 million, or $35.50 per share, that analysts have assigned to the merger-of-equals agreement Centerre reached with Mercantile on April 19.

"As long as Boatmen's offer... doesn't go away, I can't see why Centerre shareholders would accept Mercantile's offer as it presently stands," said Kenneth F. Puglisi, a bank analyst with Keefe, Bruyette & Woods Inc., New York. If Mercantile tries to match Boatmen's bid, Mr. Puglisi said, the initial dilution it produced would "wreak havoc" on Mercantile's stock price.

As of midday Thursday, there were no further comments from any of the three parties in the bidding war for Centerre, Missouri's fourth largest bank holding company, with $5.1 bil-

Senate Bill Repealing Glass-Steagall Ignores Crucial Issues

The following is an excerpt from remarks by Matthew P. Fink, senior vice president and general counsel for the Investment Company Institute, presented March 22 at the 1988 mutual funds and investment management conference in Tucson, Ariz., cosponsored by the Commerce Clearing House and the American Bar Association. Mr. Fink participated in a panel on current securities legislation and regulation. The Investment Company Institute is a trade group for the mutual fund industry.

□

IN FEBRUARY, the Senate Banking Committee reported out a bill, by an 18 to 2 vote, providing for the virtual repeal of the Glass-Steagall Act.

Why did the committee move from its limited 1984 legislative action to such a sweeping measure? Was there a sea change in congressional attitudes regarding the basic philosophy underlying the Glass-Steagall Act?

I don't think so. I think that the members of the committee felt that the bank administrative agencies had gone so far in dismantling the Glass-Steagall Act through their administrative actions that the committee had no choice but to ratify their decisions.

What does this tell us about the next legislative arena, the House of Representatives? I venture to say that one of the key determinants in the House will be the strength, or the weakness, of the proposed new regulatory controls in the Senate bill, which are designed to replace the protections of the prohibitionist approach taken by Glass-Steagall.

The word usually used to describe these controls is firewalls. That word indicates the main purpose of these regulatory controls — to protect the bank from problems encountered by its securities affiliate.

The firewalls in the Senate bill are made of kindling, and will provide little, if any, protection, even if enforced in times of crisis.

Will Firewalls Work?

History indicates that bank regulators will encourage banks to rescue their affiliates in time of crisis. The recent Federal Deposit Insurance Corp. paper, "Mandate for Change," states that one reason banks were so damaged during the real estate investment trust crisis of the early 1970s was that the Federal Reserve Board actually supported efforts by banks to try to rescue their REITs.

Firewalls generally are designed to protect banks, and not to protect bank securities affiliates or the public. The bank regulators generally are not bothered by this, since their goal is to help banks. Indeed, the FDIC's paper states that "generally speaking, the potential for abuse of an affiliate to benefit the bank is of less concern than the reverse situation because there are fewer safety-and-soundness issues surrounding most nonbanking firms." Bankers share this view.

With that background, it is useful to consider the precise firewalls contained in the Senate Banking Committee's bill.

- Underwriting of poor loans. One of the classic abuses of the 1920s was bank sales of poor loans to the public through bank securities affiliates. In its recent decisions allowing bank securities affiliates to underwrite consumer receivables and mortgages, the Federal Reserve Board barred such underwriting where the underlying assets originate from an affiliated bank, citing "the temptation . . . that the affiliates' least creditworthy assets would be securitized."

But the Senate committee's bill permits the underwriting of poor loans through bank securities affiliates.

- Misuse of confidential customer information. In his testimony before the Senate Banking Committee, Securities and Exchange Commission Chairman David Ruder noted that under current law, banks are free to give confidential customer information arising from their lending activities to their securities affiliates, if the customer consents. Chairman Ruder urged Congress to consider mandating the use of Chinese walls to prevent the bank from giving confidential customer information to its securities affiliate.

But the Senate committee's bill does not mandate the erection of Chinese walls. How difficult will it really be for a bank to obtain the customer's consent when the customer is dependent on the bank for credit?

- Interlocks. The Senate bill would prevent an officer or director of a bank from serving as an officer or director of the bank's securities affiliate. But the bill does not prohibit an officer or director of a bank from serving as an employee of the securities affiliate. The bill thus allows the very persons who are most susceptible to conflicts of interest to be in positions to exploit them.

In short, the firewalls in the Senate bill are made of kindling, and will provide little, if any, protection, even if they are enforced in times of crisis.

The firewall issue poses the basic public policy dilemma. Weak firewalls may work in good times, but they will go up in smoke in the case of a real fire.

LETTERS TO THE EDITOR

Abboud Defends FDIC-Aided Rescue of First City

To the Editor:

Martin Mayer's rambling article, flippantly entitled "Amateur Hour Revisited" [May 2, page 1] is grossly unfair to the Federal Deposit Insurance Corp. and to First City.

The financial reorganization of First City Bancorporation of Texas, made possible by FDIC assistance, has brought $500 million in private-sector capital into Texas. The state's economy, rapidly diversifying from its energy base but still deeply troubled, desperately needs outside capital in order to lend momentum to the recovery already begun.

The First City transaction — the first investor-led recapitalization of a major bank holding company and one of the largest equity private placements ever — has shown the financial markets that it can be done. The positive implications for the economy of the Texas region, in terms of jobs and wealth creation, are enormous.

The First City reorganization may well become the prototype for addressing similar problems at other troubled institutions. It was a successful blending of private capital and FDIC assistance.

As with any prototype, some mid-course corrections were necessary as unforeseen problems arose. Some were anticipated and the corrections preprogrammed.

Because of its prototype nature, First City's was an extremely complex transaction. It was a learning experience in a totally new science.

For example, one of the problems encountered was in obtaining concessions from debtholders. The problem came not so much from long-standing debtholders facing losses, but from speculators who bought the bonds at a steep discount — in some cases, bonds that had been tendered by the original owners but then withdrawn so that the owners could then resell to arbitragers — seeking to turn a quick profit by holding the deal hostage.

While I'm all for a free market, I think the FDIC must have powers to deal with such a situation. That we were able to complete the transaction in the absence of such powers is attributable more to the tenacity of the parties involved, including the FDIC, than to anything else.

The problems experienced were not unexpected. In fact, I anticipated them in my book, "Money in the Bank: How Safe Is It?," (Dow Jones-Irwin, 1988), in the final pages of the chapter titled "Recapitalizing a Failing Bank."

I even predicted the need for the legislation now being sought. The real-time experience of the First City transaction validates what was only theory when I wrote the book.

Indeed, the First city experience illustrates the vulnerability of the public marketplace to speculators, who demonstrated that the lure of a trading profit will override any broader interest for the public interest in general and on the banking system itself. Who could argue with the FDIC's desire to avoid such a situation in the future? It is a gap in the law that needs to be filled.

In my opinion, the FDIC is correct in believing that the best, most practical solution to this problem would be to gain the authority to merge solvent and insolvent banks within the same holding company. The notion put forth by the author, that what the FDIC should really be seeking is control over the terms of the bonds that banking companies issue, is interesting from a theoretical standpoint. But does he really think that such a fundamental change in the way companies sell debt is feasible? Would bonds containing such terms be marketable?

I sincerely think not. The terms should be negotiated by the dictates of the marketplace at the time. I am totally opposed to constraints on the marketplace or its freedoms.

I much prefer to give the regulators proper and effective tools to be used only on an if-needed basis. That is what the FDIC is seeking.

Finally, the author states that the FDIC "was forced to raise the ante for preferred shareholders." Where he got such a notion is beyond me. It must have seemed like a good idea to buttress his argument. But it is simply not true. The terms for the old preferred shareholders were never changed from the day the transaction was announced last September 9.

In seeking concessions from debtholders, the drop from a 90% required tender level to 70% was contemplated internally. The acceptance of 67.5% instead of 70% was necessitated by the last-minute pullout of bonds by savings and loans solicited by the arbitragers making a market, as described earlier.

I have the highest respect for the way the FDIC cooperated with the private investor group to restore First City to sound financial condition. Mr. Seidman and the FDIC staff performed superbly and professionally and, most of all, successfully. I think the private marketplace owes them unqualified commendation for sticking fiercely to their free-market principles.

Now it's up to us in the private sector to do our part to reinvigorate the economies of the communities where we operate. I have no doubt that we will succeed.

A. Robert Abboud
Chairman of the Board,
Chief Executive Officer
First City Bancorporation of Texas
Houston

Survey Gives High Five to S&L Industry's Prominent Figures

By **LINDA ELLIS**

TAKING CARE of thrift institutions is a lucrative business for a wide variety of service companies. Taking stock in them is an ongoing activity for a select group of investors — some private, some institutional.

The most prominent servicers/investors in each of 10 categories have been determined by SNL Securities, Hoboken, N.J., a leading thrift consulting and research firm. These listings will be published annually in the *American Banker.*

The survey covered 435 publicly traded thrifts, each of which is listed either on the New York Stock Exchange, the American Stock Exchange, or over the counter.

The listings include accountants, lawyers, 13D filers, institutional investors, stock transfer agents, investor relations firms, and market makers. For conversions, the list adds appraisers, lawyers, and underwriters. All have been ranked according to their prominence and/or activity in the thrift industry.

Form 13D must be filed with the Securities and Exchange Commission any time a holder of 5% of a registered security either changes intent or increases or decreasing holdings.

SNL compiled the rankings by plowing through annual reports, proxies, offering circulars, and the company's library of 13D filings to extract the names of firms in each category. In addition, each thrift was surveyed to verify the information.

The Federal Home Loan Bank Board requires a thrift to have an outside accountant, explained Reid Nagle, president of SNL Securities, but there is no similar requirement with regard to lawyers. SNL found that 301 of the 435 publicly traded thrifts list outside law firms in the role of special or general counsel.

The listings of conversion specialists include data only on thrifts that converted and were subsequently publicly traded. Conversion underwriters/agents listed are those that participated in the final stage of a share offering, whether the final stage was the community offering or the public offering. All conversions require a lawyer and an appraiser, but not necessarily an underwriter/agent.

A transfer agent does back-office work for a thrift, keeping track of shareholders

Leading Conversion Appraisers

For public thrifts converting in 12 months ended March 31

Name	Number	% of all Conversions
Kaplan Smith/First Boston, Atlanta	27	38.0
Trident Financial Corp., Raleigh, N.C.	12	16.9
Kallop & Co., Washington	8	11.3
Financial Strategy Group, Washington	8	11.3
MCS Associates, Newport Beach, Calif.	5	7.0

Source: SNL Securities

Leading Lawyers

Name	Number	Percent of Thrifts Listing Outside Counsel
Housley, Goldberg & Kantarian, Washington	56	18.6
Elias, Matz, Tiernan & Herrick, Washington	31	10.3
Muldoon, Murphy & Faucette, Washington	20	6.6
Hogan & Hartson, Washington	19	6.3
Goodwin, Procter and Hoar, Washington	13	4.3

Note: Relationships are listed here if a law firm was identified as legal counsel, general counsel, or special counsel in an annual report or through a survey sent to all publicly traded thrifts. Each of the firms listed above performs additional legal work for thrift clients in less formal relationships.

Survey Reports S&L Industry's Prominent Investors/Servicers

Continued from Page 5

nd issuing stock certificates.

A conversion appraiser determines the fair market value of a thrift before conversion from mutual to stock ownership.

Market makers are brokers who are prepared to buy or sell a stock on a continuous basis.

The law firms that are the heaviest hitters in the thrift industry are in Washington, D.C., where they can stay close to the regulatory bodies that make it necessary for savings institutions to hire lawyers in the first place.

Housley, Goldberg & Kantarian and Elias, Matz, Tiernan, & Herrick have lawyers on their staffs who were formerly with the Federal Home Loan Bank Board, the Federal Savings and Loan Insurance Corp., or the Federal Deposit Insurance Corp. Specialties of both firms include conversion work and mergers and acquisitions.

Because there are such frequent changes in accounting rules, thrifts frequent five of the Big Eight accounting firms.

"Every major tax act has affected thrifts — as does the Financial Accounting Standards Board — and we expect that to continue," said Kathleen M. Riley, tax manager for Deloitte, Haskins & Sells.

In the 13D milieu, sharing an interest in owning hefty blocks of thrift stock are investors from a New England savings bank, a group that includes Harvard Business School faculty members, a Washington construction mogul, and the partner in a family turkey farm.

The heaviest filers of thrift-related 13D forms are F. Wayne Arnold, chief executive officer of NewMil Bancorp, and Brian A. Arnold, chief operating officer of the holding company in New Milford, Conn., that is parent of New Milford Savings Bank. Other active [more than 5%] holdings of the Arnolds include Brooklyn Savings Bank, Danielson, Conn.; DS Bancor, Derby, Conn., and Cayuga Savings Bank, Auburn, N.Y.

"We know most of the institutions we have positions in very well," said Mr. Arnold. "We feel the thrift industry is a good investment."

Second is the Baupost Group, an eclectic band of investors in Cambridge, Mass., that includes professors from Dartmouth and Harvard and assorted businessmen. Baupost's holdings include Fidelity Federal Savings Bank, Marion, Ind.; Greencastle Federal Savings Bank, Greencastle, Ind.; Peoples Savings Bank, Monroe, Mich., and Valley Federal Savings Bank, Sheffield, Ala.

"We're value investors and we try to be long-term oriented," said Seth Klarman of Baupost. "If a thrift is attractive in that it has good-quality assets, decent earnings, and a good track record, then a thrift at conversion is a way of buying value at a discount. We try to buy a dollar with 50 cents. We're not flippers," who buy at an initial public offering and sell very shortly after.

Lead Conversion Underwriters/Agents

For public thrifts converting in 12 months ended March 31

Name	Number	Percent of All Conversions Using Underwriter/Agent
Trident Financial Corp., Raleigh, N.C.	7	10.6
Merrill Lynch Capital Markets, New York	7	10.6
Ryan, Beck/Community Capital, W. Orange, N.J.	7	10.6
McDonald & Co., Cleveland	3	4.5
Legg Mason Wood Walker, Baltimore	3	4.5
Keefe, Bruyette & Woods, New York	3	4.5
Alex. Brown & Sons[1], Baltimore	3	4.5

Note: Represents lead underwriter for public offering or conversion agent/manager for community offerings. Public offerings may also have had a community offering, but only the underwriter/agent for the final stage of the offering is listed. [1]Four way tie.

Leading Transfer Agents

Name	Number	% of Thrifts Using Outside Transfer Agents
Manufacturers Hanover Trust, New York	57	13.4
IBJ Schroeder Bank & Trust, New York	45	10.6
First National Bank of Boston	35	8.3
Mellon Bank, Pittsburgh	33	7.8
Registrar & Transfer Co., New York	16	3.8

Note: Survey lists all transfer agents either listed in annual reports or confirmed through a survey sent to all publicly traded thrifts.

Source: SNL Securities

Albert Abramson, a Washington contractor and independent investor, owns more than 5% of Collective Federal Savings Bank, Egg Harbor, N.J.; Citizens Savings Financial Corp., Fort Lauderdale, Fla.; Stockton Savings and Loan Association, Stockton, Calif.; and Valley Federal Savings and Loan Association, Van Nuys, Calif.

Frederick Jaindl, Orefield, Pa., sticks close to home and the family turkey farm when he invests in S&Ls. His active holdings are all in Pennsylvania; they include First Financial Savings Bank, Downingtown; First American Savings, Jenkinton; Harleysville Savings Association, Harleysville, and Pennview Savings Association, Souderton.

Investor relations firms are hired by thrifts to arrange road shows and to ensure that lavish attention is heaped on brokers, analysts, big investors, and opinion makers. More than half the thrifts that use investor relations firms use Morgen-Walke Associates, New York.

Lynn Morgenroth and David Walke had represented bank and thrift clients before the mid-1980s conversion wave, so they were poised to hold the hands of dozens of newly public savings institutions. Many of the companies had little previous following on Wall Street, said Edward A. Nebb, the firm's executive vice president, so Morgen-Walke has made it easier for them to be recognized.

Swofford & Sharff, New York, which has 14.6% of the market in thrifts that hire outside relationship firms, also credits the conversion wave for their burgeoning thrift business. It's a new world for many institutions, said George Dube, executive vice president.

The market value of the holdings of four of the top five institutional investors fell as of Dec. 31, 1987 from the period ended Sept. 30, 1987.

Wellington-Thorndike, a unit of Wellington Management Co., Boston, saw the value of its thrift portfolio fall to $551.5 million from $637.4 million. The thrift portfolio of FMR, Boston, parent of the Fidelity family of funds, decreased in value to $338.8 million from $474.3 million in the prior quarter. The value of the portfolio held by Pacific Financial Research, Beverly Hills, however, rose to $264.4 million from $172.7 million. ■

There Are Four Reasons Why Mortgage Lenders Rely on CPI:

1 Software Systems – Mainframe and micro-based systems that cover every aspect of residential mortgage lending and servicing.

2 Remote Data Processing – Timely mortgage data processing and comprehensive reports – the information you need to manage, when you need it.

3 Training and Consulting Services – Over 300 professionals with a single goal-effective and efficient service.

4 It all adds up to the lowest personnel costs per loan serviced in the industry. Four good reasons why you should rely on CPI.

CPI – Clearly The Leader

Centennial Saving Bank's Directors Approve Bid

Continued from Page 8

amination of Lincoln Savings and Loan Association, Irvine, Calif., a thrift controlled by the politically influential Charles Keating.

We suggest that the Bank Board transfer the suspected leakers to the agency's information services department as part of their praiseworthy effort to improve the flow of information there. The department also administers Freedom of Information Act requests.

Only last month, the Bank Board held what can best be described as a group therapy session. Members of its information services department, the press, and the public met discuss creative solutions to a data jam that has been decried by frustrated information seekers.

Attendees exchanged perceptions of one another. The employees saw the public and press as impatient and pushy. The public and press saw the employees as sullen, slow, and unresponsive. Following the catharsis, attendees broke up into small groups, made up, and promised to work together to make the Bank Board a better place to obtain documents. The session was a kickoff to a yearlong effort to improve the department.

How about placing the leakers on the staff of House Banking Committee Chairman Fernand J. St Germain? The Rhode Island Democrat is furious with the Bank Board for withholding documents on its activities at troubled Financial Corporation of America, Irvine, Calif.

Mr. Hoyle said an offer by Robert Bass of Fort Worth to buy FCA is impeding the paper flow. The Bank Board has documents on the table for Mr. St Germain, but it wants to ascertain that their release will not jeopardize any deal with publicity-shy Mr. Bass. ■

Foreign Central Banks Buy Long-Term US Securities

By MARGARET SOARES
The Bond Buyer

NEW YORK — Foreign central banks purchased nearly $26 billion in Treasury notes and bonds in 1987 — double their 1986 purchases and nearly three times the 1985 total, a financial economist said.

By comparison, the banks bought just $13 billion of Treasury bills in 1986, said Samuel Kahan, chief financial economist at Kleinwort Benson Government Securities, Chicago. "The lengthening of maturity appears to be continuing," he said.

Economists say central banks have changed their investment strategies because long-term maturities are more profitable and there is renewed confidence in the stability of their own currencies and the dollar.

The largest share of central bank purchases was, until recently, in Treasury bills. Since 1986, however, banks in the Group of Ten industrialized countries have broadened their holdings to include notes and bonds. The Group of Ten includes Belgium, Canada, England, France, Japan, Italy, the Netherlands, Sweden, the United States, and West Germany.

Foreign central bank purchases of dollars and government securities is common. In a period when investor interest in Treasury issues is slim at best, the banks' purchases have given technical support to a market widely viewed to be in a downtrend.

"Because the central banks needed to support the dollar, they needed to rein in funds," said Mr. Kahan. Treasury bills "aren't paying much, and the amount they need to buy is too large. It would stultify the bill market."

While the specifics of individual bank purchases are buried in Treasury statistics, economists say the note and bond purchases have run into several billions, and at least half of the total purchases have been made by the West German Bundesbank and the Bank of Japan.

"From the evidence we've gotten through market participants, we've learned several billion dollars were bought in the first four months of this year," said William Griggs, managing director of Griggs & Santow. "And it's been in coupons of two years to five years, and some seven years.

"The fact that they've decided to move out on the yield curve suggests there's been a change in strategy of central banks vis-a-vis the way they hold reserves," he said. "And there is the feeling it will continue."

Buying long-term maturities, Mr. Griggs said, is a vote of confidence for their currencies. "It suggests banks aren't worried about having to intervene to buy their own currencies."

Richard Smith, chief international economist at Continental Illinois National Bank and Trust Company of Chicago, said, "The central banks are looking at the more stable exchange rate situation and seeing that their capital losses are not great.

"Given the relative stability in the exchange markets, there has been movement, especially in Germany and Japan, where the yield differential improved relative to the dollar," he said. "U.S. securities have become more attractive than in the past."

William Sullivan, senior vice president and money market economist at Dean Witter Reynolds Inc. in New York, said, "There's one basic explanation: investment return. The yield curve has steepened and it's time to take advantage of better rates." ■

Commercial Loans Reported Down at Thrifts

➜ Continued from Page 1

Retail auto loans are included only if the cars are for commercial use.

Unsecured commercial loans include unsecured loans to builders for the construction of residential property. Also included are overdrafts on commercial demand deposits.

In 1987, commercial lending at all FSLIC-insured thrifts was down 1.8%, to $23.3 billion from $23.7 billion. In 1986, those loans jumped 51.7%. From Sept. 30, 1984, to Sept. 30, 1985, they were up 33.4%.

For the top 100 FSLIC-insured institutions, business lending grew 9.7% to $16.5 billion in 1987. In 1985 and 1986, those loans rose 73% and 43%, respectively.

Buffalo-based Empire of America FSB was the nation's fifth largest thrift corporate lender at yearend 1987. Two months ago, Empire announced it will phase out the bulk of its commercial lending activities. The higher-quality credits are not providing adequate spreads, said Paul A. Willax, chairman and chief executive officer. Gibraltar Savings, Beverly Hills, Calif., is also edging out of commercial lending.

A Bank Board spokesman noted that "mergers and liquidations, as well as switch-overs to Federal Deposit Insurance Corp. insurance, account for most of the loss" in commercial and industrial lending. The number of FSLIC-insured thrifts fell to 3,147 from 3,220 in 1986. Further, thrifts enjoyed very rapid growth when they were first granted commercial lending powers in 1982, the spokesman said.

Thus, thrift institutions began with a very small base. "With the maturing of the market, commercial loan growth has moderated," the Bank Board spokesman said.

Last year, 43 of the top thrifts in business lending had increases of more than 25%, with 18 of those posting gains of 50% or more. In the previous year, 34 of the top 100 had increases of 50% or more.

The regional concentration of thrifts with big lending gains shifted from a year earlier. In 1986, growth occurred in the Southeast, with more than a third of the big gainers in that region. Last year, 17 of the thrifts with a 25% rise in business lending were located in the Northeast and Middle Atlantic regions — including New York, New Jersey, Pennsylvania, Maryland, and Virginia.

Interest collected on commercial loans showed sizable gains. The top 100 thrifts posted a 28.2% increase to $1.4 billion in that category. In the year-earlier period, commercial loan interest was up 34.9%.

Gross operating income, on the other hand, was up a scant 1.5% to $30.9 billion. Thus, interest on commercial loans was a larger percentage of gross revenues at these institutions — 4.67% versus 3.72%

• In 1987, there was a total reshuffling of the top five thrifts in business lending from a year earlier. California Federal Savings and Loan Association, Los Angeles, moved into the top spot, with $732.1 million, an increase of 2.2%. Crossland Savings FSB, Brooklyn, N.Y., rose six places to rank second, reporting a 46.1% increase in commercial loans to $699.4 million. Home Federal Savings and Loan Association, San Diego, was third, with $699.2 million, up 31.4%. Old Stone Bank FSB, Providence, R.I., fell from the top spot in 1986 to fourth in 1987, reporting a 22.7% drop in commercial lending to $681 million.

• The largest percentage drop in commercial lending was posted by CenTrust Savings Bank, Miami. The thrift's commercial loans fell 89.4% to $66.6 million. CenTrust ranked fourth in 1986, but fell to 70th place in 1987. Gibraltar Savings Bank, Beverly Hills, Calif., reported a 63.4% loss in commercial lending, to $56.6 million. The savings bank fell to 85 from 32. City Federal Savings Bank, Bedminster, N.J., which placed fifth in 1986, posted a 63.4% drop in business lending to $225.5 million, ranking 19th. ■

Bank Call Notice

CONSOLIDATED REPORT OF CONDITION OF

THE MERCHANTS BANK OF NEW YORK

of New York, New York

And Foreign and Domestic Subsidiaries, a member of the Federal Reserve System, at the close of business March 31, 1988 published in accordance with a call made by the Federal Reserve Bank of this district pursuant to the provisions of the Federal Reserve Act.

ASSETS		Dollar Amounts in Thousands
1. Cash and balances due from depository institutions:		
a. Noninterest-bearing balances and currency and coin		$ 44,277
b. Interest-bearing balances		17,143
2. Securities		270,824
4. Loans and lease financing receivables:		
a. Loans and leases, net of unearned income	203,550	
b. Less: Allowance for loan and lease losses	2,090	
d. Loans and leases, net of unearned income, allowance, and reserve		201,460
6. Premises and fixed assets		5,008
9. Customers' liability to this bank on acceptances outstanding		11,405
11. Other assets		10,159
12. TOTAL ASSETS		$560,276
LIABILITIES		
13. Deposits:		
a. In domestic offices		$492,470
(1) Noninterest-bearing	158,388	
(2) Interest-bearing	334,082	
14. Federal funds purchased and securities sold under agreements to repurchase in domestic offices of the bank and of its Edge and Agreement subsidiaries, and in IBFs:		
Federal funds purchased		3,000
16. Other borrowed money		206
18. Bank's liability on acceptances executed and outstanding		11,405
20. Other liabilities		2,768
21. TOTAL LIABILITIES		$509,849
EQUITY CAPITAL		
24. Common stock		$ 3,444
25. Surplus		19,728
26. Undivided profits and capital reserves		27,255
28. TOTAL EQUITY CAPITAL		$ 50,427
29. TOTAL LIABILITIES, LIMITED-LIFE PREFERRED STOCK, AND EQUITY CAPITAL		$560,276

I, Richard A. Urbano, V.P. & Comptroller, of the above-named bank do hereby declare that this report of condition has been prepared in conformance with the instructions issued by the Board of Governors of the Federal Reserve System and is true to the best of my knowledge and belief.

RICHARD A. URBANO

We, the undersigned directors, attest the correctness of this Report of Condition and declare that it has been examined by us and to the best of our knowledge and belief has been prepared in conformance with the instructions issued by the Board of Governors of the Federal Reserve System and is true and correct.

Chemical Backs Pilots' Buyout of Allegis Corp.

➜ Continued from Page 2

Trust Co., and Morgan Guaranty Trust Company of New York were coagents on that $2.44 billion restructuring loan for Allegis, earlier this year, and Chase Manhattan Bank was part of the syndicate that provided the loan.

One banker characterized the pilots' bid as a "long shot," not worth sacrificing the bank's relationship with Allegis. The proposed takeover faces a number of problems, including the opposition of the union representing machinists at the airline.

Chemical has also had a relationship with Allegis. The bank's 1986 annual report highlights a $750 million financing that Chemical lead-managed for Allegis. And the bank was in the running for a role in the restructuring loan.

New management at Allegis changed many of the company's relationships with financial institutions, however. And the bank decided that being the leader in the pilots' takeover could be more lucrative.

The pilots have agreed to concessions that will save the airline $350 million a year. That will easily finance the additional debt burden arising from the buyout, according to Robert Harrity, a managing director at Chemical. ■

Today

Irving Bank Corp. and the Bank of New York Co. each expressed optimism that it had won a proxy fight to control Irving's board. Official results will be disclosed May 24. ______ 2

Ads by the Bank of New York were termed insulting and "nearly xenophobic" by Italian bankers. The print ads were designed to tap a nationalistic vein and promote Bank of New York's bid for Irving over the one by Banca Commerciale Italiana. ______ 2

Citicorp is selling its domestic investment management company to USF&G Financial Services Corp., Baltimore, for an impressive $102.5 million. ______ 3

The ABA has reached an agreement on legislative proposals with the National Association of Realtors. Real estate brokerage and investment activities should be conducted through a bank holding company subsidiary, the two groups concluded. ______ 3

Manufacturers Hanover Trust Co. has struck a deal with Trintex to provide banks and thrifts with software and processing for Prodigy home banking. ______ 3

The fire-ravaged headquarters of First Interstate Bancorp remains off limits to all 2,000 employees, but the bank company appears to be operating as if disaster never struck. ______ 3

Advest Group Inc., Hartford, Conn., said it will acquire Lyons, Zomback & Ostrowski, a bank consulting firm in New York. ______ 12

Index to Week's Stories ______ 6
Memory Bank ______ 14

COMMENT

A lack of enthusiasm among bank employees can generally be traced to out-of-touch, inflexible management, writes Dr. Paul S. Nadler. ______ 4

The decline in the U.S. dollar indicates American living standards are due to slip in relation to Europe and Japan, writes H. Erich Heinemann. ______ 4

NEWS MONDAY

Shareholders have the right to demand the extinction of banks they own as evidenced by the Bank of New York-Irving Bank Corp. takeover war. But such situations pose problems — for employees who have staked their futures on the company's continued existence and customers who depend on its services. ______ 7

Political action committees have become standard operating procedure in Washington. Financial lobbyists say the "best" PAC belongs to Barnett Banks of Florida. ______ 10

Worth Repeating

We are not in the business of acquiring. We are not in the business of merging. We are in the business of improving the performance of Bank of America.

A.W. "Tom" Clausen, chairman of BankAmerica Corp. [Page 1]

As Election Nears, PACs Shift to High Gear

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — John Porter, president and chief operating officer of Delaware Trust Co., Wilmington, figures on going into the 1988 elections with a bankroll well in excess of $1 million.

"We raised $645,000 last year, and we should take in another $765,000 this year," he said. "That comes to about a million four, doesn't it?"

Mr. Porter isn't a candidate or even a campaign manager. But he heads one of the big league political action committees that fund a major share of the American political process.

With the 1988 general election only six months away, the American Bankers Association's BankPac, which Mr. Porter oversees, is roaring along in high gear. It has been disbursing money here and there over the past 15 months, much of it in denominations of $250 or $500 for the fund-raisers held here — morning, noon, and night — almost every day Congress is in town.

AN **American Banker** SPECIAL REPORT

Come August, though, BankPac's directors will meet to decide on a final distribution of the fund, and then some real money will roll out. On the Senate side, the ABA will "max out" — give the full $10,000 permitted in an election cycle for the primary and general election — for those it favors.

"In the House, we obviously can't do that," said Mr. Porter, given the larger number of elected officials. "So we concentrate on five committees: Banking, Agriculture, Energy and Commerce, Rules, and Ways and Means."

In the view of Common Cause, the self-styled "citizens lobby," BankPac and its counterparts are working steadily to undermine the foundations of representative government.

Interview

BankAmerica's Clausen Shoots For $1 Billion Earnings by 1990

By MICHAEL A. ROBINSON
West Coast Bureau

SAN FRANCISCO — BankAmerica Corp. — despite seven straight years of declining earnings and the deep stain of red ink — hopes to earn more than $1 billion on a pretax basis in 1990, company chairman A.W. "Tom" Clausen declared.

In a little less than three years, he said, he wants the company to exceed its performance of 1980, when the holding company's Bank of America was the world's largest and most profitable bank. Pretax earnings in 1980 were $1.02 billion, before the effects of securities transactions.

"My goal is, with a smaller balance sheet, 10 years after, to beat our best year ever," Mr. Clausen said in a 35-minute interview with the *American*

Management Sets the Tone for Service

By DR. PAUL S. NADLER

IT was quite a contrast! I had listened to Stew Leonard, the fabulous owner of Stew Leonard's, a grocery store in Norwalk, Conn., as he told bankers at a Total System Services User conference how he keeps his employees happy.

Mr. Leonard was written up in "A Passion for Excellence" by Tom Peters as one of America's great managers, and his talk explained why.

- He listens to employees' complaints and suggestions personally.
- He stresses every achievement in his monthly magazine for employees (which must have, by his demand, at least 10 pictures per page so employees in his single store get their faces in the magazine frequently.)
- He lets people know what is expected of them and what is expected of the store. (Mr. Leonard tells of the meat manager who personally delivered a new fresh turkey to a customer when she complained that the other one was a little frozen.)

Everyone in the audience left Mr. Leonard's talk feeling that he deserves his reputation and that it would be fun to work for his store.

But then I sat and talked with the head of operations at a major Southern bank. His story was quite different.

Nadler Says:

Enthusiam makes or breaks a bank. You can tell immediately if you have a happy shop or a dull one.

"We have no enthusiasm," he said. "We just hang in there because we need the job. And the reason is that everything is too rigid and we think top management doesn't give a damn about us.

"Nobody ever sees the key people in the bank," he said. "We have the feeling they don't even know where the operations department is, even though we are pretty damn efficient and complaints are few."

How to Dampen Staff Spirits

Specifically, this operations head, who has been with the bank for many years, lists policies that kill employee enthusiasm:

- "We have people who have done their job and done it well for years. They are the backbone of the bank, but they are at the top of the salary range as the bank has structured it. So they sit year after year, getting no raises at all except cost-of-living adjustments, while they see less-qualified people get raises because the table of organization says that there is room for them to be rewarded."
- "We have job postings. So we train people and take the time and effort to bring them up to standard, only to find that they leave us as soon as they are trained because another job that is posted in the bank pays more than we are allowed to pay them. So instead of benefiting from their training, we have to start all over with new people, because we have no salary flexibility and the other department has a higher pay range available."
- "Even with regard to outside help, we are locked in by policies we can't control. We wanted to use one service provider for our credit card operation. But we were told we had to use another one that was much less efficient and more expensive, because the bank got large balances from the latter organization.

"But once we signed a long-term contract, the service company pulled its balances, and they held us to the contract anyway. So here we are with a system everyone knows is expensive and causing trouble, no way to correct it, and no benefit coming to the bank from the customer in any other way, either."

As I heard these complaints from a banker who obviously was trying to do a good job, all I could think of was the old adage, "When a fish starts smelling, it starts from the head." Top management caused these problems at the operations officer's bank, and the unhappiness filters down to the employees, who, in turn, make the customers feel less than wanted.

And as Stew Leonard pointed out in his remarks, "What bothers us is that people who are unhappy walk away without saying a word, so we can't do anything about the loss. And it is five times easier to keep an old customer than to win a new one."

Mr. Leonard points out that each customer can be worth a fortune to the store. For if a customer spends $100 a week, that's $5,000 a year and $50,000 a decade! No wonder Stew Leonard's has a policy that the customer is always right — and he means always.

He gave the example of a lady who complained that the casaba melon she bought the day before was rotten, and the store refunded her money even though they had not stocked or sold a casaba melon for months. Why risk a $50,000 account for one melon?

Happy Employees Mean Happy Clients

As another example, he said that the store people just watch as customers nibble strawberries, nuts, and other bulk items in excessive quantities (although one manager jokingly suggested that they give up the price tags and just weigh the customers in and out of the store, charging per pound gained.)

Evidently the Southern bank never learned this lesson — that a good, flexible personnel policy can keep employees happy, and this can, in turn, keep customers happy.

Enthusiasm makes or breaks a bank. You can tell immediately if you have a happy shop or a dull one. One way I have always had of testing this is to ask my host when I speak if it is all right to kid the chief executive officer.

When he says yes and the staff roars as I kid the chairman, I know it is a happy bank. If my advice is wrong, and they gasp when I use a joke on the CEO, I know there is trouble. My best example is the time I was told by the officer who hired me: "Don't even mention the CEO's name in your talk." The bank went down the tubes within the next two years — possibly because of this same feeling of distance between the staff and the top people.

The sad point is that to the typical customer, the bank is its local people. A branch manager seems like the top officer to the typical customer. No one has ever heard of the people in the head office.

So if the head office makes these contact people feel that they are the bank, and their decisions do make it or break it, this can do far more good for the organization than almost any decisions made in the rarified atmosphere of the executive floor. ■

OVERVIEW

Stroll on Pall Mall Can Be Humbling For New Yorker

By H. ERICH HEINEMANN

LONDON

A VISIT to London is a humbling experience for an American these days — especially for someone from New York. The roads here are not full of potholes. Homeless derelicts are an exception on the London streets, not a rule.

The bridges across the Thames, unlike those across the East River, are not collapsing from decades of neglect. The subways work; they are gaining passengers, not losing them.

The fruits of sustained economic expansion and prosperity are everywhere in London, as in New York. The major uncertainty is whether the boom will be sustainable. Governments in Japan and Europe have driven their economies at top speed, in part to accommodate their huge imbalance in trade with the United States.

Looming in the background is a sense of foreboding that inflationary pressures may lurk not far from the surface. When — if — inflation resurfaces, this could set in motion a chain reaction that would end the longest period of growth in peacetime since World War II.

The dollar, quite plainly, will hold the key. The rule of thumb is that prices in London are roughly the same as in New York, except that they are expressed in sterling. The ordinary tourist has to pay about $2 to buy one pound, which makes the exchange rate easy to calculate.

Just multiply everything by two. That is as clear evidence as you are likely to get of the decline in America's relative purchasing power (and, in time, living standards), as well as a measure of the competitive edge that U.S. industry will likely have in world markets in years to come.

It would be all too easy to dismiss the current exchange rate as simply reflecting an overvalued pound, a warning to the British government of a potential loss of competitive position, of falling exports and then ultimately another painful currency crisis. There is some truth in that analysis. Prime Minister Margaret Thatcher has to watch out, lest she fall into a trap that has brought down many British governments in the past.

Yet in a broader context that is only part of the story. The United States is in the preliminary stage of a basic transformation in its role in the world economy: from importer to exporter, from creditor to debtor, from leader to follower. A significant decline in the real purchasing power of the dollar — and increase in the real value of the yen, deutsche mark and pound — is certain to play a major role in that transformation. Americans had best understand that their real living standards will slip, particularly so in relation to Europe and Japan.

The National Business Economic Issues Council, an organization of U.S. business economists, debated the prospect for the dollar, plus lots more, at a meeting here last week. The council has long had overseas members, but for the first time the group went abroad to discuss prospects for the world economy with counterparts from Europe and Japan. As U.S. business turns outward to exploit the export opportunities that the falling dollar will bring, meetings of this sort will become more and more routine.

To get down to the nitty-gritty, the outlook for business in the main industrial nations in 1988 is excellent. Japan is enjoying a full-fledged economic boom. Industrial production is running

Who's Getting the Most From PACs?

Senate Banking Committee	PACs[1]	Total Receipts[2]
James Sasser, D-Tenn.	$821,631	$1,934,780
Donald Riegle, D-Mich	$729,784	$2,030,153
John Heinz, R-Pa.	$504,859	$2,067,008
Chic Hecht, R-Nev.	$487,150	$1,349,634
Paul Sarbanes, D-Md.	$327,599	$800,217
House Banking Committee		
Nancy Pelosi, D-Calif.	$312,265	$1,356,315
Mary Rose Oakar, D-Ohio	$257,625	$467,906
Tom McMillen, D-Md.	$221,743	$389,472
Fernand J. St Germain, D-R.I.	$198,206	N/A[3]
Joseph DioGuardi, R-N.Y.	$175,650	$800,748

[1] Contributions principally from PACs but also includes money contributed by other candidates' committees.
[2] Includes fund-raising totals during first 15 months of the election cycle, Jan. 1, 1987 through March 31, 1988.
[3] Less than $328,000.

PACs Shifting into High Gear

Continued from Page 1

"What they are getting is access, the opportunity to make their case," says Common Cause vice president Randy Huwa of the PACs. "The most precious commodity a member of Congress has is time. It's difficult for the average citizen to get the eye or the ear of a member."

PAC money, he adds, sharpens the "laser-like focus" of the special interest groups, speeding the move toward single-issue politics, a trend Common Cause views as decidedly unhealthy.

Mr. Porter disagrees. "I believe in the PAC process," he responds. "There are limits, but basically it gives everybody a chance to make a meaningful contribution."

Healthy or not, PACs are likely to be around for a while. Senate Majority Leader Robert C. Byrd, D-W.Va., struggled mightily this year and last in an ultimately unsuccessful effort to force a vote on legislation that would have established a system of public financing for Senate races. That bill is moribund, and the House is not considering similar legislation.

ELECTIONS
'88

THE financial services industry has bred literally hundreds of PACs. The major trade groups all have their own funds, as do the major banks, securities firms, insurance companies, and others.

The granddaddy of them all however, is RealPac, the political action committee of the National Association of Realtors. The ABA's $1.4 million makes the trade association a serious player, but that sum pales alongside the $6.5 million the Realtors expect to spend this year on political campaigns.

One staffer connected with the trade group's PAC said the Realtors will contribute to about 300 races this year. Most of that money will go to incumbents, but in about 10% of the races the trade group will support challengers, said the spokesman.

The Realtors' deep pockets give it a distinct advantage over the ABA. Where BankPac is forced to target key committee chairman and members of a limited number of panels, the Realtors can literally cover the floor in both bodies — contribute to enough members to assure that a working majority in each chamber has benefited from RealPac.

Still, bank industry PACs are not exactly impoverished. Records on file at the Federal Elections Commission show that the top 10 banking concerns have already spent nearly $1 million through their own committees. The Independent Bankers Association of America will spend nearly $200,000, and the Consumer Bankers Association will add money as well.

What the PAC figures don't account for, however, is campaign contributions from individuals. The Securities Industry Association PAC, for example, is relatively small; so far it has contributed only $62,383, according to Election Commission records.

But individuals in the securities industry ante up in political contests too, as do individuals in the insurance and real estate industries.

The Independent Insurance Agents of America, for example, sponsors fund-raisers at their offices as often as several times a week when Congress is in town, according to Robert Rusbuldt, the organization's chief Capitol Hill lobbyist.

Individual agents invited to the fund-raiser pay $250 or $300 to attend and, in return, get a lunch or breakfast and an opportunity to ask a few questions. The fund-raisers generate anywhere from $7,000 to $20,000, "depending upon who the member is, what committees he serves on, and how senior he is," Mr. Rusbuldt said.

Individual contributions do not go unnoticed, and Delaware Trust Co.'s Mr. Porter, for one, wishes individuals in his industry would emulate the investment bankers.

"You have to recognize that the people in the securities, insurance, and real estate industries are quite dependent upon performance-oriented compensation," he said. Individuals are encouraged to be entrepreneurial and to spend their own money.

"We have more of a corporate culture," he added, suggesting that bankers are more likely to participate in company-sponsored activities than in initiatives of their own.

In deciding who receives money, PACs use similar criteria. Almost all try to reward their friends and punish their enemies, though the ABA, among others, has in the past taken the view that "tribute money" should also be paid to one's enemies, if they are important enough.

"We look at need — how tight their race is," added Joseph Belew, president of the Consumer Bankers Association. That theory, widely shared, argues that if funds are limited, a PAC should use its resources to keep friends in Congress, rather than to pad the treasuries of sure-thing campaigns.

Small trade groups must also aim carefully, choosing strategic committees and races they can win.

"With a small PAC, we look at the banking and the agriculture committees, with banking coming first," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America, which represents small banks.

Mr. Guenther adds that the IBAA "rarely goes the challenger route," a sensible reaction to easily verifiable fact that incumbents rarely lose.

Some PACs hedge by giving to both sides. In the Republican primary, for example, the National Association of Home Builders gave $5,000 each to the campaigns of George Bush, Robert Dole, Alexander Haig, and Jack Kemp. On the Democratic side, Richard Gephardt and Paul Simon both received $5,000 as well.

EVEN organizations that play only one side of the fence during the campaign ante up with post-election "debt-retirement contributions" for the winner if they back a loser during the campaign.

From the Senate Banking Committee, James Sasser, D-Tenn., has received the most in PAC funds this election cycle with $821,631. Donald Riegle, D-Mich. — who's likely to become next year's committee chairman — follows closely with $729,784. His total campaign receipts, including PAC and individual contributions, was $2,030,153 as of March 31.

In general, seniority — which ordinarily implies power — is rewarded in the PAC game. On the House Banking Committee, however, a number of freshman Democrats have done exceedingly well in this election cycle, even though first-term House members are virtually powerless.

Two freshman Democrats — Tom McMillen of Maryland and Nancy Pelosi of California — show up among the top 10 recipients of PAC contributions in this election cycle. Ms. Pelosi, in fact, was first.

In each case, there are individual reasons: Mr. McMillen's fame as a National Basketball Association star, and Ms. Pelosi's former involvement as a key Democratic party fund-raiser from a large a , rich and rich state, are among the considerations.

Rep. Nancy Pelosi

But one congressional staffer who works for a banking committee member that has been a heavy beneficiary of PAC contributions offered a more cynical explanation: "There's a banking bill under consideration."

In other words, with Congress engaged in the consideration of legislation that could reshape the financial services industry for years to come, it's hard to say no when invitation to a banking committee member's fund-raiser arrives.

And players in the PAC game have very little doubt that members take note of who gives and who doesn't.

Mr. Guenther, for example, recalls a particular member of Congress who is widely regarded as influential on banking issues.

"If he has a fund-raiser and we don't attend, he comments on it," said Mr. Guenther, who asked that the member's name not be printed. "He'll come up to me and say, you weren't there."

Suffice it to say, the Independent Bankers rarely miss one of his fund-raisers. ■

How Major Financial PACs Are Spending Their Money

Organization	Funds To Democrats (No. of Recipients)	Funds To Republicans (No. of Recipients)	Total
ABA BankPac	$201,500 (113)	$114,950 (59)	$316,450
Independent Bankers Association	$64,320 (87)	$26,000 (39)	$91,220

St Germain Gains A Big Headstart In Election Funds

By ROB WRIGHT

AS he gears up for his 1988 reelection bid, House Banking Committee Chairman Fernand J. St Germain has already accumulated more than 10 times the campaign funds his leading Republican opponent has — and a sizable share of it comes from sources in the financial industry.

As of March 31, the Rhode Island Democrat had more than $430,000 on hand for his reelection effort. Although Mr. St Germain has not yet officially announced he is a candidate, aide John Heilmann says there is "no doubt" Mr. St Germain will soon do so.

Mr. St Germain's most recent filing with the Federal Election Commission shows he has strong financial backing from political action committees in the housing industry and labor unions, in addition to financial services groups. Among his large receipts were:

- $5,000 — the biggest amount PACs are allowed to give any one candidate for each election — from both the First Boston PAC and the Credit Union Legislative Action Committee.
- $3,000 from the Investment Company Institute PAC.
- $2,500 from the Citicorp Political Fund.
- $2,000 each from the Independent Insurance Agents PAC and the National Association of Life Underwriters PAC. ■

Today

Fifteen of the top 25 bank holding companies are now superregionals, making the newest category of holding company the norm rather than the exception. As a result of mergers, two new banking firms enter this top grouping: Shawmut National Corp., Hartford, Conn., and First Fidelity Bancorp., Newark, N.J. 2

Poor management and the failure of Colorado's Division of Banking to enforce regulations played a significant role in the state's industrial bank crisis, according to the state auditor. 2

National banks can now purchase stock in the Federal Agricultural Mortgage Corp., or Farmer Mac, the Comptroller's office has ruled. 14

Executive Changes 5
In the News 3

COMMENT

The leveraged buyout market is strong, but a number of pitfalls can hamper the unwary banker, according to Nora Ann Wallace. 4

TECHNOLOGY

Profit margins on check clearing services have declined over the past five years at half of the correspondent banks in a recent survey. 3

A highly integrated branch automation system is being brought to the U.S. market by the Nixdorf Computer Corp. The system is built on integrated software that allows a single workstation to handle banking applications, office automation, data processing, and system maintenance. 6

Transfirst Corp., Dallas, said it has retained a contract to provide automated teller machine services in 200 Houston-area convenience stores that were formerly part of the 7-Eleven chain. 6

The National Automated Clearing House Association appears likely to tighten its enforcement of the "prenotification" process, a technical procedure that many financial institutions have been either disregarding or rebelling against. Despite this, a majority of bankers and others submitting comments to the Washington-based association want the controversial rule to remain in effect. 7

Twelve major computer and communications companies announced support for a set of standards, known as the Open Systems Interconnection, that make it possible to link all computers, regardless of manufacturer. 8

The Fed Reserve System posted a 9.2% increase in net income last year from the payment services it provides financial institutions. 10

Worth Repeating

Intuition says that problems in New England are going to get worse, not better. The $64,000 question is: How much worse?

Security Pacific Forced to Curb Canadian Brokerage Strategy

By JED HOROWITZ

NEW YORK — The Federal Reserve Board has quietly indicated that bank subsidiaries cannot underwrite or deal in most securities even if they immediately shift the risk to an offshore company.

The decision came to light during Security Pacific National Bank's negotiations to purchase 30% of Canadian broker Burns Fry Corp. The Fed approved the application in late April but forced the Los Angeles-based bank to give up its plan for so-called riskless principal underwriting, according to Russell Freeman, general counsel of the bank.

The Fed also ruled that the large Canadian broker must end certain real estate and equity trading activities within one year of the purchase date.

The decision was not published in the Federal Register because Security Pacific made its application under Regulation K of the International Banking Act of 1978, which does not require bulletin notices by the Fed.

Security Pacific apparently sought to permit U.S. investors to buy and sell Canadian securities through Burns Fry's U.S. brokerage subsidiary.

Under the riskless principal concept, which has been approved by the Securities and Exchange Commission, a bank-owned unit could buy or sell a se-

NEW ENGLAND

Loan Quality Holding Up – So Far

By MICHAEL WEINSTEIN
New England Bureau

BOSTON — Despite investors' jitters about shaky real estate loans, asset quality at New England banks remains above the national average, except for a handful of troubled construction loans.

A survey of the biggest New England banking companies showed that nonperforming asset ratios at the end of the first quarter were stable or up modestly at most of the banks, compared to yearend 1987. "The numbers would indicate that there hasn't been a change in asset quality," said Peter J. Ostrowski of the bank and thrift consulting firm of Lyons, Zomback & Ostrowski Inc., New York.

As of yearend, almost all of the banking companies surveyed had nonperforming asset ratios that were below the national average for banks of their size. New England's banks have plunged into real estate lending, taking advantage of the region's red-hot real estate market in recent years.

But the lending bacchanalia have created fears of a wicked loan-loss hangover, according to analysts. "I know some investors who are scared," said one bank ana-

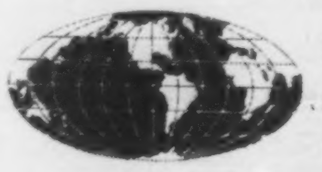
Rules Will Force Japan's Banks To Raise Equity

Report Finds a Lack Of Core Capital Elements

By JOHN J. DUFFY
London Bureau

LONDON — Japanese banks may have to raise as much as $50 billion in equity in order to comply with the new international standards for capital adequacy, according to a report.



International Briefing

The report, by IBCA Banking Analysis Ltd., a London-based credit rating agency, said that while Japanese banks have ample reserves in the form of investments, they are severely lacking in so-called core capital elements such as shareholders' equity. Because of this shortfall, Japanese banks will need a big infusion of new equity before the capital proposals take full effect in 1992, the report said.

"With their low published equity-asset ratios, Japanese banks will, on the face of it, have to raise substantial equity," the report said. "At the moment, it is by no means certain just how this will be done, although Japanese banks' very substantial hidden reserves mean they clearly have ample resources."

Such hidden reserves consist largely of investments in Japanese equities, which the banks carry on their books at cost, rather than at their much higher market value. The Japanese ministry of finance has been allowing banks to include 70% of these reserves in their capital ratios. Under the new proposals, however, only 45% of such reserves will count as capital and those

Reagan Has No Plan for Thrifts

WASHINGTON — A White House spokesman said President Reagan has no plan to deal with the growing thrift crisis but instead will depend on federal regulatory agencies to find ways of resolving the problem that some estimate could cost $50 billion to $60 billion to resolve.

"The regulatory authorities are in a position to deal with the problem, and we look to them for guidance," White House spokesman Marlin Fitzwater said on Tuesday when asked how Mr. Reagan intends to solve the thrifts' problems. Mr. Fitzwater said the President is being briefed on the thrift crisis by Treasury Secretary James A. Baker 3d and by Council of Economic Advisers Chairman Beryl Sprinkel.

Despite a $10.8 billion thrift bailout package Congress approved last year, which uses money from healthy thrifts to pay for closing weak ones, the Federal Savings and Loan Insurance Corp. finished 1987 twice as much in the red as at the end of 1986 — an estimated $13 billion of deficit, versus $6 billion. Thrift industry leaders say federal money will be needed to pay up to $50 billion for closing weak thrifts, which would worsen federal budget deficits.

Indian Citibank Branch Bombed

NEW DELHI — A bomb exploded on Tuesday inside a Citibank branch in New Delhi, leaving one person dead and 13 others injured, according to police and hospital officials. About 25 customers and 18 employees were inside the bank on the ground floor of a new, glass-covered 13-story building at Connaught Place, New Delhi's most prestigious shopping district, when the explosion took place.

Hundreds of police converged on the site and cordoned it off, preventing people from entering. Police bomb squad personnel searched for remains of the explosive device and also scoured Citibank offices on the third and fifth floors for other bombs.

A company official, who asked not to be identified, complained that "there is no security in the bank. The gates are not guarded. Anyone can walk in with bags that are not checked."

American Express Enters China

BEIJING — The next time Karl Malden appears in an American Express advertisement, he might be standing atop the Great Wall of China. American Express signed a deal on Tuesday with the state-owned Bank of China that gives the bank's customers access to the American Express corporate card and gold card. American Express is following a trail blazed by MasterCard and Visa, which set up their own deals with the Bank of China last year.

Hanover Signs Disaster Contract

NEW YORK — Manufacturers Hanover Trust Co. has signed a four-year contract with Comdisco Disaster Recovery Services Inc., under which Comdisco will supply the bank with custom disaster recovery services at its Carlstadt, N.J., recovery site. If service at a Manufacturers computer center is disrupted by fire or some other disaster, it has the right to use computers provided by Comdisco. Under an agreement announced by the bank on Tuesday, Comdisco will assume the majority of resources of Manufacturers Hanover Data Services Corp. Manufacturers Hanover Data Services Corp. and Comdisco have been jointly supplying disaster recovery services and facilities to the bank since 1984.

Half of Banks Say Check Clearing Profits Down

Survey Indicates Most of Declines Were Because of Competition from the Fed

By YVETTE D. KANTROW

NEW YORK — Half of the correspondent banks responding to a recent survey said their profit margins on check clearing services have declined over the past five years. Most of the declines were attributed to competition from the Federal Reserve System.

The survey, conducted by the Association of Reserve City Bankers, also found that two-thirds of banks providing check clearing services believe the Federal Reserve System "could eventually be the predominant provider" of these services.

The Federal Reserve has been competing with banks in the check clearing business almost since its inception in 1913. But with passage of the Monetary Control Act in 1980, the Fed has been explicitly charging fees for check collection and other payment services.

Bankers have continually accused the central bank of using its quasigovernmental status to obtain a competitive advantage. The Association of Reserve City Bankers, which represents big city banks that compete against the Fed, late last year surveyed users and providers of check clearing services to assess the impact of the Federal Reserve's aggressive entry into the business.

The results, which were published in April, showed that many smaller banks have increased their use of Fed services since 1981, citing price reductions as the main reason.

Frederick Heldring, chairman of the association's subcommittee on Fed relations, said the study indicated that prices for Federal Reserve services have "important competitive implications for the nation's private check collection system and the ability of that private system to continue providing check collection services to the public in the future." Mr. Heldring is chairman, president, and chief executive officer of Philadelphia National Bank.

Check collection, the biggest of the payment services for which banks are

Terry Hannum, Executive Vice President, Bank of Boulder

"With McDonnell Douglas as our partner, we can offer our merchants quality products and reliable service."

The Bank of Boulder prides itself on going the extra mile for its customers by providing quality products and services, so when they decided to start a national merchant program, they chose McDonnell Douglas to provide Electronic Draft Capture services to their merchants.

"Our bank is committed to the principle that quality products and service attract and retain business," says Terry Hannum, Executive Vice President. "We chose McDonnell Douglas to work on our team because of their experience in transaction processing, their hands-on approach in working with their customers and the high performance their POS System delivers day in and day out."

"Now after just 18 months, our merchant program is a huge success. We have over 10,000 EDC terminals placed nationwide and we are continuing to grow at a rapid pace. We could not have achieved this success without McDonnell Douglas as our partner."

To find out how McDonnell Douglas Payment Systems Company can meet your POS needs, call John Maxey collect at 415/794-2634.

Beware of Pitfalls in Today's Leveraged Buyout Deals

The following is excerpted from remarks by Nora Ann Wallace, a member of the law firm of Willkie Farr & Gallagher, New York, presented March 31 as part of a panel discussion on loan quality at a symposium on restructuring the financial system. The symposium was sponsored by the Bank and Financial Analysts Association.

□

AS EACH WEEK goes by, the leveraged buyout market appears to get stronger and more financing becomes available. Junk bond market is coming back. Institutions are back in the market, attracted by the fact that leveraged buyouts are lower-priced and more soundly structured. And there are enormous resources in the hands of LBO funds looking for good investments.

Nonetheless, the unreliability of the junk bond market and the institutions has created new business opportunities for banks. Increasingly, banks are being called upon to provide subordinated financing in addition to their traditional secured financing, and they are able to demand higher rates, more equity contributions on the part of buyers, and equity participations for themselves.

I'd like to turn to some of the pitfalls to avoid in making LBO loans in today's environment. Some areas where I have seen problems arise are 1) in the cash flow projections on which the deal is based, 2) the total financing structure of the deal, 3) the business due diligence review performed by the lender, and 4) conflicts of interest that can arise when a lender plays more than one role in a transaction.

First, as anyone who has participated in an LBO transaction knows, the most important structuring consideration is cash flow. If a leveraged buyout does not work on a conservative projection of cash flow, it shouldn't be done. Even where a lender has a security interest in hard assets worth many times the amount of debt, practical and legal problems may prevent the lender from ever realizing on those assets.

Cautions in Evaluating Projections

So what are the things to watch out for in evaluating projections? Watch out for numbers that rely on improving revenues through synergy or growth in sales, or cutting costs by reducing overhead, working capital, or capital expenditures. The deal should work based on the company's historical numbers, adjusted only for the new financing costs and the effect of taxes.

Next, even if the sponsors of the deal have a quick exit strategy, make sure there will be enough cash available to finance the working capital and capital expenditures necessary to stay in business during the term of the loan.

Make sure that the projections take into account any contingent liabilities such as pension costs, guarantees, or litigation costs, since these do not normally appear on the balance sheet but can represent significant cash items.

Next, make sure to do a sensitivity analysis for various rates of inflation and higher interest rates. (Remember that a leveraged buyout done today, with inflation and interest rates at relatively low levels, is likely to face an increase in both.) Also factor in a possible downturn in sales that might result in a recessionary period.

Don't overlook items such as payments due on subordinated debt and ordinary operating expenses that may not be so easy to buy back if the company is to stay in business, such as payroll and rent obligations.

Finally, be extremely careful where the projections rely on selling assets or on realizing on overfundings of pension plans. These assets may not turn out to be as valuable as the buyer hopes.

The second area in which problems can arise is in the total financing structure. A large leveraged buyout financing typically has multiple layers of debt and equity, and the senior lender must take care that terms of those securities don't impair the company's financial condition.

If an investment bank or institution has made a short-term bridge loan, how is it going to be repaid? If it is intended to be refinanced with junk bonds, what if the bonds can't be sold by the time the bridge loan matures?

If subordinated debt is a zero-coupon or a pay-in-kind note, have projections taken into account the fact that they will become cash-paying at some point? Does this happen automatically or only when certain interest coverage ratios have been achieved?

Does the financing make sense in terms of the buyer's exit strategy? If the deal is an "earn-out" rather than a "bust-up," none of the debt should be structured to require large paydowns in the short term. If it is a bust-up, make sure sales are for cash and that the paydown schedule takes into account costs of sale, including taxes.

Make sure your understanding of the strategy is the same as that of the equity holders, management, and the subordinated debt holders. They will be your financial partners in this enterprise, and it is better to have an understanding up front as to the buyer's plan for the business, and to build any necessary covenants into the loan documents.

Also make sure that any existing creditors are on board, including large trade creditors. From their point of view, capital of company has been impaired, management may be different, cash management policies may change. They may not be willing to deal with the company on the same basis as before.

The third kind of pitfall to avoid is taking short-cuts in the due diligence process. Don't rely on the buyout group or subordinated lenders to do it for you. They have different economic concerns and legal rights. An independent review will also help the senior lender maintain its seniority in a bankruptcy situation.

Also, be extra careful in hostile deals, or in hostile deals that become friendly, only because management has no choice. There is little opportunity to do due diligence in these deals, and merger agreements don't have substantive reps and warranties. The company is sold on a take-it-or-leave-it basis. It's in your interest to condition the financing on having an adequate opportunity to review the company.

Finally, you should be aware of some special risks that can arise when a bank plays several roles in an leveraged buyout, by providing senior financing, subordinated financing, and taking equity.

This is a risk for the senior lender because, in a bankruptcy, it might be considered to control the borrower and be put in the legal position of a shareholder instead of a creditor. This is called equitable subordination.

> If a leveraged buyout does not work on a conservative projection of cash flow, it shouldn't be done.

There is also a risk for the bank that purchases a participation in the senior loan but doesn't get a piece of the subordinated debt or the equity. The originating bank may have a conflict between its interests as a creditor and its interest as an equity holder. If it has sold down its loan to the point where its interest as a senior lender is not as significant as its equity interest, it is less likely to call a loan or take other action that would impair the equity position.

And now I'd like to turn to the legal issue: the issue of fraudulent conveyance. A bankruptcy court can use this concept to find that a secured lender's lien on the assets of a company was a fraudulent transfer that can be voided under the bankruptcy laws. The voiding of the security interest puts the secured lender in the same position as the general creditors.

A fraudulent conveyance can be found where either there was actual intent to defraud the other creditors of the acquired company or where the facts indicate that there was constructive fraud. Since actual fraud does not usually exist in a normal commercial setting, of much more concern is the concept of "constructive fraud."

In order to establish constructive fraud, two elements must exist:

First, the court must find that the borrower did not receive fair consideration for the security interest. Second, the court must find that as a result of the transaction the borrower did not have adequate capital: because the transaction caused the borrower either to become insolvent, to be unable to pay its debts as they would mature, or to have unreasonably small capital to carry on its business.

> Hostile deals offer management no choice and little opportunity to do due diligence.

It would seem that in a leveraged buyout the borrower should receive fair consideration for the security interest, as long as the borrower receives the proceeds of the LBO loan. The problem is that the borrower immediately uses the loan proceeds to pay the selling shareholders. Recent cases have held there was not fair consideration to the borrower when the proceeds ultimately were paid to shareholders. Under this reasoning every leveraged buyout will fail the fair consideration test.

It thus is essential in structuring a leveraged buyout to satisfy the second test, the capital adequacy test. It must be shown that at the time of the leveraged buyout that the borrower was solvent, the borrower and the senior lender reasonably believed that the borrower would be able to pay its debts as they matured, and the borrower would have sufficient capital to carry on its business.

Definition of solvency for this purpose is that the "fair salable value of assets exceeds all probable liabilities." This is not a GAAP balance sheet test.

Assets for this purpose are valued not at book value but at something close to fair market value. Liabilities for this purpose must include off-balance sheet items such as guarantees and future costs of litigation.

The remaining two measures of capital adequacy — that borrower's capital was not unreasonably small and that borrower had the ability to pay debts as they mature — can be met by applying the same considerations previously mentioned that are used in evaluating projections. The company must be able to generate enough cash to pay all its mandatory obligations and maintain its operations, including generating working capital and cash necessary capital expenditures.

Whether there was a fraudulent conveyance at the time of the leveraged buyout will be determined by a court with the benefit of hindsight, maybe several years after the transaction. But the court will be deciding whether the tests were met at the time of the leveraged buyout. This means that the documentation of the transaction, the certificates and financial information delivered at closing, and the lender's due diligence files made at the time of the transaction will carry a lot of weight. Those files should include at a minimum appraisals, a solvency letter from an independent party, and detailed pro forma statements and projections.

As for the near future, the pace of leveraged buyouts should keep up in the second and third quarters. Interest rates are projected to stay low, and fears of recession have eased.

Also, this is an election year, so there is pressure to buy now in case antitrust laws or the tax climate become less favorable.

The only real threat to continued leveraged buyout activity would be a downturn in the economy.

Survey Shows Check Clearing Profits Down for Many

Continued from Page 3

charged by the Federal Reserve, brought in revenues of $500.6 million last year. That equaled 77% of the Fed's $649.7 million in payment service revenue, according to the central bank's annual report on payment services. The 12 Federal Reserve banks processed 17 billion checks in 1987, 4.8% more than they did in 1986.

The Association of Reserve City Bankers commissioned Kenny & Associates Inc., Memphis, to study the role pricing plays when banks choose check clearing providers. Kenny mailed a questionnaire to 3,500 banks that use check collection services and another 324 that provide these services.

Banks in the user group ranged in asset size from $25 million to $750 million, while banks in the provider group had a minimum of $750 million in assets. More than 22% of the user group and 43% of the providers participated in the survey.

30% Have Boosted Use of Fed

Nearly 30% of the 775 user banks in the survey said they had increased their usage of the Fed's check clearing services since 1981. Only 14% said they decreased Fed usage, and another 54% said they have not changed their clearing practices.

More significantly, 34% of the banks that have increased Fed usage attributed their moves to reduced per-item and deposit charges. This was even more true for larger bank respondents. Six in 10 of those with assets between $500 million and $750 million said lower prices was the primary reason for their increased patronage of the Fed.

Another 21% said they increased Fed usage because they were able to reduce their float through speedier collections.

More than half of the user banks said they expect some change to occur in their check clearing practices. Of 778 banks responding to the question, "Which of the following statements describe the future of check clearing for your bank?" 25% said they expect to use the Fed more. Other answers included greater use of correspondent banks, which garnered a 17% response, and greater use of clearing houses, at 14%.

Of 117 service-providing banks — those competing directly against the Fed — 49% said their profit margins on check clearing services decreased over the last five years. Two-thirds of those that indicated a downward trend cited increased competition from the Federal Reserve as the primary reason. Another 15% attributed the trend to increased competition from other providers, while 8% attributed it to increased operating costs.

Of the 48 provider-banks that said their check clearing profits were decreasing, 65% said they expected this trend to continue, compared to 35% who said they did not.

Check clearing profit margins increased over five years for 34% of the provider-banks. No specific reason was cited in the survey report.

The survey also asked provider banks about changes in check clearing volume since 1981. Responses were evenly divided, with 44% saying volume has increased and 44% saying it decreased. A majority of those with decreasing volumes said they expect this trend to continue.

Correspondent bankers fear the central bank's power, the survey showed. Of 138 provider banks, 66% agreed with the statement: "The possibility exists that the Federal Reserve could eventually be the predominant provider of check clearing services."

Nearly 60% agree that the Fed can charge prices too low for commercial banks to match. Forty-one percent said the number of banks offering check clearing services is decreasing.

The Association of Reserve City Bankers, based in Washington, consists of 400 senior banking executives representing 150 major banks. The check clearing survey was endorsed by the American Bankers Association. ■

Why Check Clearing Profits Are Down

Survey base: 57 bankers who say their check clearing profit margins have declined in the past five years.

Increased competition from Federal Reserve	66%
Increased competition from other providers	15%
Increased operating costs	8%
Other	11%

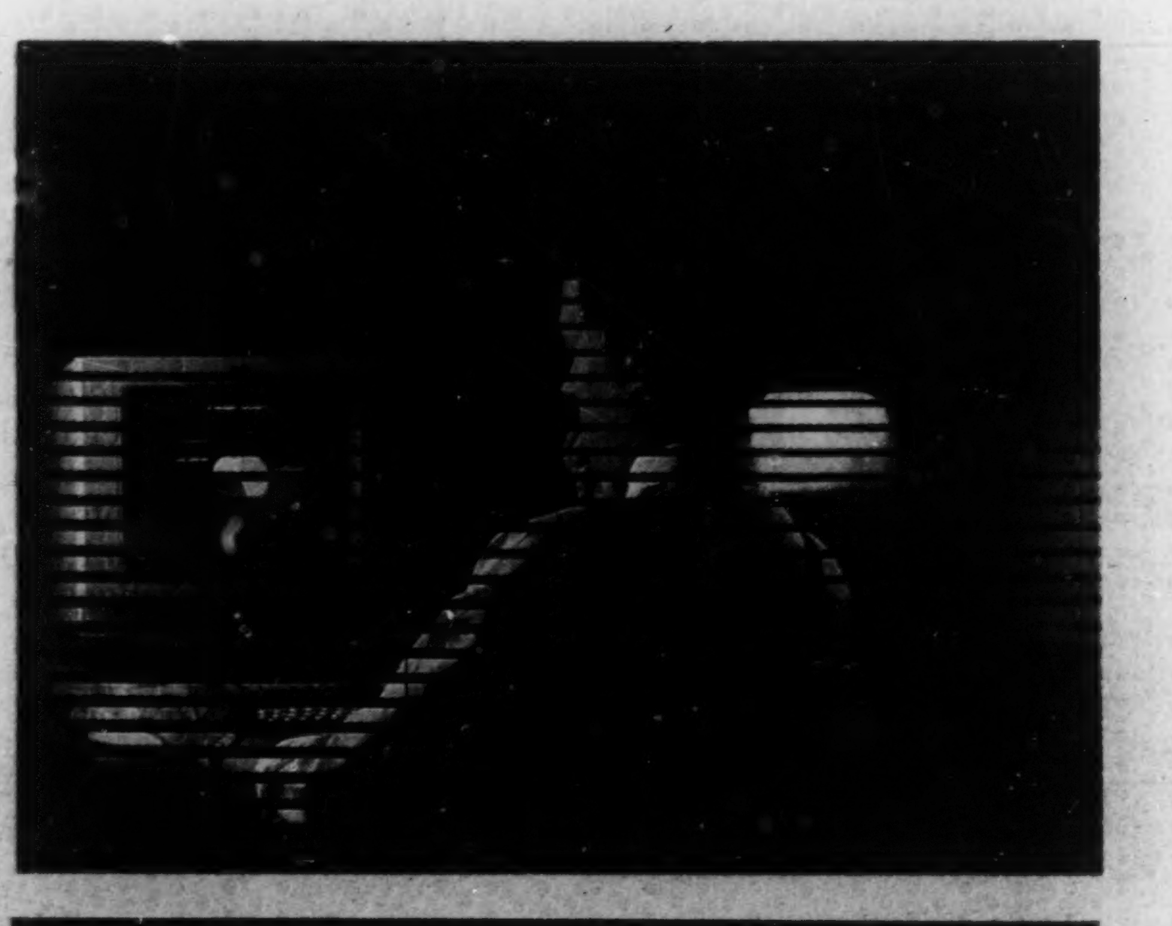
Banker-Retailer Disputes Will Be Mooney's Topic

NEW YORK — Banker-retailer disputes, which have hindered the development of electronic funds transfer systems at the point of sale, will be the discussion topic at the May 19 luncheon meeting of the Electronic Banking Economics Society of New York.

The guest speaker will be Robert A. Mooney, president of J.C. Penney Systems Services Inc., a vendor of point-of-sale payment systems to banks and retail merchants. He is also chairman of the Electronic Funds Transfer Association, which draws members from banking, retailing, and other industries with an interest in EFT.

For information on attending, call William Herzog of the Equitable Life Assurance Society at 212-554-3979. ■



Easy Access To
Information Services
Gives You That
Competitive Edge

Now there's a better way to compete in the hectic world of finance. It's called STX—a software package that gives you quick, cost-effective access to the information services you need—all from an IBM 3270 terminal. STX gives you the ability to access a variety of data networks such as legal data bases, stock and bond retrieval services, and electronic mail. It can also help access other non-IBM applications. And with STX, there's no need for extra terminals, modems, or phone lines.

STX does the work for you. For instance, financial institutions use STX to do the repetitive job of signing on, making the dial-up connection, and accessing the latest financial market information.

Some benefits STX provides include:
- Dramatic Productivity Gains
- Easy Auditing
- Complete Security
- Substantial Time Savings

In the ever-changing financial community, can you afford not to compete? For a free copy of "Understanding STX," please call **(800) 323-2600** or **(412) 323-2600** in Pennsylvania.

Fed Income from Payment Services Rose 9.2% in '87

Change in Accounting Rules and a Tighter Rein on Costs Boosted Bottom Line

By JEFFREY KUTLER

NEW YORK — Controls on back-office operating costs and a fortuitous accounting change helped the Federal Reserve System post a 9.2% increase in net income last year from the payment services it provides financial institutions.

It was a big improvement over 1986, when the Fed suffered an 8.5% decline in income from what it calls priced services. Banks pay fees to the central bank for these services, which include check collections, wire transfers, automated clearing house processing.

In reversing course, the Fed managed to hold overhead to a 1.9% increase in 1987 — half the general inflation rate and well below the 6% to 8% increases in administrative costs that commercial banks have averaged in the past few years.

The Fed's costs would have risen 5.6% in 1987, closer to the banking industry norm, if there had not been a change in accounting for pension costs. Conforming to Federal Accounting Standards Board Statement No. 87, the central bank said it converted $18.7 million of pension expenses into long-term assets.

Without the accounting change, net income would have fallen by 23%.

The latest data come from the Fed's annual report on priced services, which was issued last month. It showed 1987 net income of $62.9 million on revenue of $649.7 million.

Fed Income from Priced Services

(Dollar amounts in millions)

	1987	1986	% Change
Revenue from services	$649.7	$627.7	3.5
Minus: Production expenses	506.8	497.5	1.9
Income from operations	142.9	130.3	9.7
Minus: Imputed costs	52.7	45.8	15.7
Plus: Other credits	5.0	8.0	-37.5
Income before taxes	95.2	92.4	3.0
Minus: Imputed income taxes	32.3	34.8	-7.2
Net income	62.9	57.6	9.2

Note: Priced services include large-dollar wire transfers, automated clearing house, check collections, book-entry securities transfers, float, and cash transportation. Totals in table may be off slightly due to rounding.

Source: Federal Reserve Board

Bankers Criticize Fed Reports

The Fed's priced-services reports usually are met with skepticism by executives of major correspondent banks that offer competing services. The bankers argue that the Fed, as a government agency, is not a fair or legitimate competitor. The bankers also question the cost-accounting assumptions that underlie the central bank's earnings statements.

In setting its prices and arriving at a net profit figure, the Fed calculates costs that it does not actually bear — such as taxes, deposit insurance, and interest. These figures make the Fed's bottom line theoretically comparable to that of a commercial bank.

While the accounting issues may be debatable, the growth trends are generally accepted as valid. The data-gathering methodology is consistent from year to year, making use of a Federal Reserve internal accounting system known as the Planning and Control System.

The data show the Fed has been increasing its priced-service revenue since enactment of the Monetary Control Act of 1980.

The law, which mandated the current pricing system, requires the Fed to recover its operating costs, not to make a profit. Last year it recovered 104.6% of total costs, compared with 104.2% in 1986 and 105.6% in 1985. The recovery goal for 1988 is 101.8%.

Priced services, though a major concern for the Fed's private-sector competitors, are relatively insignificant in the broader realm of central banking functions.

Services income is a fraction of the total operating income — most of it from interest on government securities — that the Federal Reserve banks earn and contribute to the Treasury each year.

In 1987, that contribution was $17.7 billion, with services income accounting for $62.9 million, or less than 4%.

Although the $62.9 million figure was up 9.2% from the previous year, the total priced-services revenue of $649.7 million was up a more modest 3.5%.

A year ago, the Fed reported that its 1986 revenue rose 2.3% to $627.7 million, but net income fell 8.5% to $57.6 million.

Back-office performance explained the difference between the 1987 and 1986 bottom lines. In 1986, these production costs rose 4.4% to $497.5 million. In 1987, they grew only 1.9% to $506.8 million.

The 1987 expenses would have been $18.7 million higher — amounting to $525.5 million and a 5.6% cost inflation — if FASB Statement No. 87 had not been invoked.

If that $18.7 million had come off of the bottom line, the after-tax net income from priced services would have fallen 23% to $44.2 million.

The imputed costs on the income statement — theoretical float, debt, sales taxes, and deposit insurance — rose 15% to $52.7 million in 1987. Income taxes, if the Fed paid those typical of the 25 largest bank holding companies, would have fallen 7.2% to $32.3 million.

The Fed said it had booked pretax profits and, hence, more than recovered its overhead costs from each of the payment services categories. They are check collection, wire transfer and net settlement, automated clearing house, securities safekeeping and noncash collection, book-entry securities transfer, and cash services.

Check collection is the biggest business, accounting for about four-fifths of revenue and expenses. The Federal Reserve banks processed 17 billion checks in 1987, 4.8% more than in 1986.

The volume of wholesale fund transfers over Fed Wire rose 14% to $142 trillion. The average transaction amount was $2.6 million.

The Fed processed 861 million automated clearing house payments, 21% more than in 1986.

Increases in Securities' Transfers

Acting as fiscal agent for the U.S. Treasury, the Fed said it processed 7.3 million transfers of book-entry Treasury securities, up 12.3% over 1986, and 2.1 million transfers of federal agency securities, up 19.9%.

Assets on the Fed's pro forma balance sheet for priced services rose 5% in 1987 to $$2.9 billion. These included $676 million of "net items in process of collection," or uncollected float, which more than doubled from $300 million at the end of 1986.

In its drive to eliminate float from the payment systems and charge banks for any remainder, the Fed recovered the cost of $756.6 million of average daily float during 1987. Only $48.2 million of average daily float went unrecovered, down from $105.6 million a year earlier. ■

US Using Automation to Collect Debts

NEW YORK — The Justice Department will use an automated system to assist in the collection of debts owed to the federal government.

The system is part of a project in which private law firms are being hired to litigate government claims against private debtors. These claims amount to $32 billion and do not include delinquent taxes.

The "privatization" of debt collection is now in a test phase, involving 10 U.S. attorneys' offices and 40 private law firms.

On April 19, Data Transformation Corp., Silver Spring, Md., won the government contract to link these offices in a computer network. It subcontracted with Legal Software Solutions Inc., Jericho, N.Y., to provide its debt collection software, known as EasyCollect.

Legal Software Solutions, formerly known as Excelsior Corp., has been developing and marketing legal and debt-collection software for the past 10 years. Last December, the City of Denver became the first government entity to buy EasyCollect, which is also being offered to banks, retailers, and other credit grantors.

The Justice Department's EasyCollect contract will yield $400,000 in software and services revenue the first year. The contract has four option years to follow. If exercised, the options could bring an additional $5.2 million to Legal Software Solutions, according to Jack Castro, president of the company. ■

VOL. CLIII NO. 93 Thursday, May 12, 1988

Today

The issue of banks underwriting their own asset-backed securities is on the front burner again, with the focus now shifting to state-chartered member banks and their regulators. 2

Chief financial officers at commercial banks are paid less and work longer hours than their counterparts at other companies, according to a study by Heidrick and Struggles, the Chicago-based executive search firm. CFOs of banks received an average of $231,000 in cash compensation in 1987, compared to a $330,000 average for diversified financial companies and a $292,000 average for the entire sample of CFOs. 2

The Justice Department's decision to drop the investigation of House Banking Committee Chairman Fernand J. St Germain seems unlikely to affect either the politics or legislative output of the banking panel. 2

Charles J. Koch, the new chairman of the National Council of Savings Institutions, predicted that taxpayer funds would be used to bail out the insolvent FSLIC. 2

A smart card that may replace paper travelers checks is being created by the Thomas Cook Group. The travel company said it has commissioned SmartCard International to make prototypes of a plastic card with computerized memory that would keep track of purchases and itineraries for business travelers. 3

First-quarter profits at Columbia Savings and Loan Association fell to about $5.3 million, or 13 cents a share, from $98 million, or $2.60 a share, a year earlier. 12

After more than 20 years in banking, Richard Urfer has established his own corporate finance services firm. 16

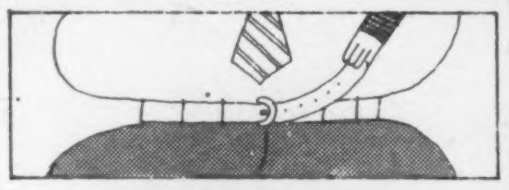
An American Banker Special Report

Regional Banks Step Up Cost-Cutting

By JOHN P. FORDE

Regional banks are preparing for a more competitive banking environment with a swarm of cost-cutting programs to stem growth in operating expenses, an *American Banker* study of annual reports shows.

Tactics include reducing staffs, combining computer systems, and building more efficient facilities.



Belt-Tightening

"Many banks have enacted aggressive restructuring programs in order to cut or control noninterest expenses," says Cheryl Swaim, a bank stock analyst at Oppenheimer & Co. The regional banking companies generally have held expense growth to less than 10% over the past year, she says, compared with faster expense growth at money center banks.

Annual reports indicate that regionals, many of which have been reporting double-digit increases in earnings over the past few years, are battening down their hatches in anticipation of tough times ahead.

Some regions, such as New England and the Southeast, are beginning to report increases in loan problems — especially in real estate lending. Analysts predict that increasing levels of nonperforming assets — combined with weak loan demand — may put regional bank earnings under some pressure over the next few years.

So far, however, the industry has not won raves for its success in containing costs. One of its most vociferous critics is J. Richard Fredericks, a bank stock analyst at Montgomery Securities, San Francisco.

In the first quarter, the 31 bank holding companies that Mr. Fredericks covers posted a 7.9% increase in noninterest expense from the year-ago quarter.

"Our cry for the industry to better control noninterest expense is falling on deaf ears," the analyst says in a recent

Does FDIC Have a Big-Bank Bias?

Small Texas Institutions Think So and Consider Suit

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Independent bankers in Texas say they are tired of being "too small to survive" and aren't going to take it any more.

The Texans are venting their frustrations against federal bank regulators, claiming they are unresponsive to small-bank needs. A growing number of bankers and state officials are considering suing the Federal Deposit Insurance Corp. and other regulators for discrimination by bank size.

Of last year's 184 bank failures, 50 occurred in Texas. So far this year, 23 banks in the Lone Star State have been closed under the weight of bad loans in real estate, energy, and agriculture.

During the same period, more than $2.6 billion in federal money from the FDIC flowed into Texas to prop up three big failing banks: First City Bancorporation of Texas, First RepublicBank Corp., and BancTexas Group. Only one small Texas bank — Crossroads Bank in Victoria — was kept open with FDIC cash.

FDIC Chairman L. William Seidman "thinks there are too many banks in Texas and Oklahoma, and he's going to close them," contends John Shivers, president of the $140 million-asset Southwest Bank, Fort Worth.

"They have virtually refused to do

Check-Hold Rules Finalized by Fed Despite Protests

By YVETTE D. KANTROW

NEW YORK — The Federal Reserve Board Wednesday cleared the way for the implementation of rules requiring banks to make checking deposits available to customers within specified time limits. The rules take effect Sept. 1.

The Fed, as required by the Expedited Funds Availability Act, proposed regulations in December to limit the holds banks may impose on checks before allowing withdrawals. The public had 60 days to comment on the Fed's rules, known as Regulation CC.

At an open meeting in Washington on Wednesday, the Board of Governors adopted its original proposals with

Asset-Backed Underwriting Under Attack

By JED HOROWITZ

NEW YORK — Banks are once again on the firing line for underwriting securities backed by their own assets.

A suit filed against the Comptroller of the Currency over the issue has been pending for almost a year, but the focus is now shifting to state-chartered member banks and their regulators, according to banking and securities industry sources in Washington and New York.

"Some challenge to asset-backed public offerings by state banks is something that the SIA will seriously consider," said James Weidner, an attorney representing the Securities Industry Association.

The Federal Reserve Board, which oversees state-chartered member banks, has not ruled on the legality of underwriting asset-backed issues. But sources at the Fed hinted that they have been asked to render an opinion.

If Fed officials find that the activity violates the Glass-Steagall Act prohibition on public underwriting of securities, the asset-backed activity could grind to a halt. If they give their imprimatur to underwriting, the securities industry is likely to sue the Fed as it has done with the Comptroller.

Chemical Bank started the ruckus last month, when it helped sell $257 million of securities backed by payments on auto and light-truck loans that the bank originated. Chemical, which is chartered in New York and regulated by the Federal Reserve Board, was lead underwriter on the deal but did not officially ask the Fed for permission to underwrite.

Manufacturers Hanover Corp., another New York-chartered bank regulated by the Fed, recently registered a $350 million securities offering backed by its credit card receivables. Salomon Brothers Inc. is lead manager on the deal, but sources at the bank said Hanover will be comanager. The application is now being considered by the Securities and Exchange Commission.

Yesterday, Chemical again pushed the issue by helping to sell a $58 million public offering of senior mortgage pass-through certificates. It underwrote one-third of the deal, for which First Boston was lead manager.

"We're underwriting where legally permissible," said Robert R. Rupp, vice president and manager of the bank's residential mortgage product management group. He noted that the mortgages were all originated by Chemical. "Our lawyers felt comfortable that we can underwrite."

A few months earlier, however, Chemical stayed out of the underwriting syndicate when it issued $52 million of mortgage pass-through certificates. At the time, Mr. Rupp cited caution by the lawyers.

Sources said that before Chemical underwrote its auto-backed securities, Fed lawyers cautioned bank officials that the regulator had not ruled on the legality of the activity. Chemical did not disclose this warning in its offering prospectus. There appears to be no need for such disclosure from an investor-protection standpoint, said John C. Roycroft, assistant director of corporate finance at the Securities and Exchange Commission. But an official at the Securities Industry Association countered that the omission could be cited if a disgruntled investor decided to sue the bank.

Ironically, the asset-backed underwriting debate arose just when it seemed quiescent. Earlier this week, First National Bank of Chicago said it was comanager on a $300 million issue of securities backed by payments on its credit card advances. Advocates of

Finance Chiefs Make Less at Banks: Study

By DAVID NEUSTADT

NEW YORK — Chief financial officers at commercial banks are paid less and work longer hours than their counterparts at other companies, according to a study by Heidrick and Struggles Inc., the Chicago-based executive search firm.

Bank chief financial officers received an average of $231,000 in cash compensation in 1987. That was substantially below the $330,000 average for diversified financial companies and the $292,000 average for the entire sample of chief financial officers.

The finance chiefs worked an average of 58.3 hours a week at banks, slightly more than the 57.9 hours averaged by the group as a whole. But 16.2% of the bank officials reported working more than 70 hours a week, compared with only 3.6% at financial companies and 9% from the entire sample.

Also, the bank chief financial officers averaged 19 hours a week in meetings, compared with 17.3 hours for the other two groups.

The bankers are the most dissatisfied about their long hours: 47.2% complain they don't have enough time for family, compared with 35.7% at financial companies and 31.3% among all those polled.

Heidrick and Struggles received survey replies from 340 *Fortune* 1000 companies, including 38 commercial banks and 28 diversified financial companies.

The survey results suggest that commercial banks are very conventional in their choices of chief financial officers. Bank chief financial officers were 70.3% Protestant, compared with 53.5% for the group as a whole. All the bank officers in the sample were white, and only one was a woman.

The bank officers were slightly younger; their mean age was 47 years, compared with 49.5 years for the entire group. They were more likely to be married to their first spouse, 94.4%, compared with 82.1% for the entire group.

Bankers do not move around much. Respondents have relocated only 1.3 times, compared with 2.7 times for the larger group. They have had fewer employers, 2.4 each, compared with 3 each for the entire sample. Bankers have worked for their current employer for 15.9 years, compared with 9 years for chief financial officers of financial companies and 13.5 for the whole group.

Despite their relative stability, the bankers are less likely to have a management contract. Only 24.3% of bankers have a contract, compared with 42.9% at financial companies and 33.2% among the whole group.

If they do have a contract, chief financial officers of banks are less likely to have a golden parachute. At banks the figure was 66.7%, among financial companies 100%, and 82.1% for the entire sample.

The search firm asked the chief financial officers to identify their major challenges. Generally, the bank officers shared the views of others in the group. Everyone named "employing top people" as the biggest challenge. But 20% of bankers saw "creating a comprehensive financial reporting system" as a major challenge, compared with only 7.5% at financial companies and 5.4% for the whole sample.

When asked to identify the key factors in their own success, bankers — along with everyone else — ranked hard work first. But the bankers thought "people" skills were less important, while decisiveness and luck were more important than other chief financial officers said. ■

What CFOs Are Paid

Dismissal of St Germain Probe Lifts Cloud from Banking Panel

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — The Justice Department's decision to drop its investigation of House Banking Committee Chairman Fernand J. St Germain without seeking an indictment seems unlikely to affect either the politics or legislation of the banking panel.

"We had been hearing in the street for months that the investigation was over," said one bank industry lobbyist. "So it really doesn't have any great effect."

"If anything," said another close observer of the banking committee, "it enhances his power a bit."

Last August, the Justice Department began looking into allegations that the Rhode Island Democrat had accepted expensive gifts of food and entertainment from financial services industry lobbyists. Members of the House are prohibited from accepting gifts of more than $100 in a calendar year from people with an interest in legislation, although gifts of under $50 do not count toward the limit.

The Justice Department investigation followed a 14-month inquiry by the House Ethics Committee into allegations that Mr. St Germain had used his office for personal gain. That panel, after spending $300,000, produced a 1,405-page report that exonerated Mr. St Germain on all but some minor reporting violations.

Mr. St Germain, who has refused comment throughout the ethics panel and Justice Department investigations, issued a terse statement on Tuesday, saying he had been told by his lawyer that Justice was dropping its inquiry. "This means the case is closed," he said. His lawyer, Raymond Banoun, could not be reached for comment on Wednesday.

One lingering dark cloud for Mr. St Germain is the possibility of another investigation by the House Committee on Standards of Official Conduct, the formal name for the ethics committee.

In closing its case, the Justice Department turned its files over to the ethics panel, according to John Russell, a department spokesman. Material developed before the grand jury was not provided to the panel, Mr. Russell said. He said a court order would be necessary to secure the release of that material.

It was not possible to learn from the ethics committee whether it would resume deliberations on Mr. St Germain.

However, one knowledgeable congressional staff member, said it is unlikely the ethics committee will begin another investigation. "We're not going to spend another damn dime on this thing," he said, noting the $300,000 price tag on the last inquiry.

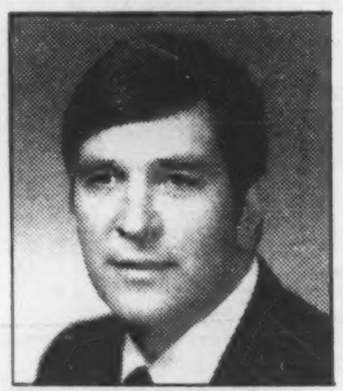
Still unknown is whether the allegations raised in the investigation will affect Mr. St Germain's bid for a 15th term in Congress or for a new term as chairman of the banking panel. It was known in 1986 that he was under investigation, however, and he still won reelection with 58% of the vote. He is expected to face a closer contest this time, in no small part because of the negative publicity from the investigations.

In 1987, when the 100th Congress organized, 70 Democrats voted against Mr. St Germain's reelection as banking committee chairman — a large number, considering he had no opposition. Working in his favor, say congressional sources, is the lack of a clear alternative to Mr. St Germain among the committee's most senior Democrats. ■

Taxpayer Funds Will Save FSLIC: Thrift Official

By JIM McTAGUE

TORONTO — The new chairman of the National Council of Savings Institutions predicted on Wednesday that taxpayer funds would be used to bail out the insolvent Federal Savings and Loan Insurance Corp.



Charles J. Koch

Charles J. Koch, in his inaugural address at the council's annual meeting here, also predicted that Congress would merge the FSLIC with the Federal Deposit Insurance Corp. "The reality is that FSLIC isn't going to make it with its current funds," he said. "Unfortunately, Congress and some trade groups haven't recognized this."

Regulators should be shutting down sick thrifts, not keeping them open, said Mr. Koch, president of the First Federal Savings Bank, Cleveland. He succeeds John T. Morgan, chairman of American Savings Bank, New York, an FDIC-insured institution.

The council's membership is dominated by New England savings banks.

Mr. Koch (pronounced "coke") said the cost of funds has been rising at his own FSLIC-insured institution, despite a downward trend in rates. "We have to begin to get Congress and the public to separate the sick institutions from the healthy," he said.

How to Take the Sting Out of Branch Closings

By N.W. "RED" POPE

WHO WOULD ever have thought the day would come when we would be closing, streamlining, and consolidating branches? But the fact is that a variety of circumstances over the past decade have slowed, if not reversed, the trend of the Sixties and Seventies to expand anywhere that opportunity or "gut feel" suggested.

I recall that during my first years in banking, initially in North Carolina and then in Florida, opening a new branch was among the more challenging of marketing tasks. In fact, in North Carolina we opened an average of one branch every other month for 12 years!

Today, however, the cost of land, buildings, and equipment for new branches has made return on investment highly questionable. With new technologies that make possible a variety of delivery systems and with more methods to determine branch profitability, bank management is fast concluding that there may indeed be better and cheaper ways to serve customers.

Pope Says:

The name of the game in closing a branch is care and attention to customers and staff. Employee morale is at stake. And service quality is an outgrowth of employee morale, good or bad.

As we continue to learn how to segment markets, to provide the products and systems customers want instead of the building and concepts we bankers have felt were appropriate, we face the fact that the cost of more mature facilities may no longer be justified. Plants are moved. Highways come through. Neighborhoods change. Businesses close. Demographics change, affecting the type of facility needed to serve the altered customer base.

Twenty years ago, human beings provided cash, accepted deposits, and made loans in a banking facility, but now we realize that a large percentage of our users would just as soon get cash from an ATM, borrow by telephone, write a check on a preauthorized credit line, and have their pay electronically deposited. It saves time, is simpler, and with new relationship pricing, could be cheaper for the customer as well.

So those of us with large branch networks must conclude that many of our older facilities are not serving customers as they once did. They are not providing the revenue streams of yesterday, and yet their operational and personnel costs rise. Also, we must build new branches in emerging markets to capture new business. That's an expensive, tough decision.

Certainly we do not wish to remove facilities that are critical to the financial well-being of a market area if there are no convenient alternatives for comparable services. And we do not want to lose good customers we have worked with for years.

One alternative is to reduce the number of people at the branch, reduce business hours, and perhaps relocate some servicing, such as lending to a "cluster," or hub, facility nearby.

Another possibility, which is palatable to many customers if there is another branch fairly close by, is consolidation. It means putting two branches together in a single facility to serve the overall market.

Whatever approach you take, there are numerous communications and marketing challenges to be aware of and to program for.

The principal audiences to be identified are, in order of importance: the customers, the employees, and the press.

Here is a brief checklist of questions to consider:

- When do you tell the customers? How do you explain what is taking place and where they will be served in the future? To what extent will they be inconvenienced, and what is the bank going to do about it?
- Will there be "premium" offers to relocated customers, such as free safe deposit boxes for a time or free checks, to keep their business? What will you use to placate them?
- Will there be any special promotion involving relocation? Are you going to make it a big deal in some significant and exciting way, or will you prefer to make the change as inconspicuously as possible?
- What about signage in the lobby and outside the branch, and maps showing the new home of the branch and other area branches?
- Will there be advertising of any sort? Direct mail to area businesses?
- Press releases in advance explaining what, when, and why? Visits to the press to discuss the matter and answer questions.
- How do you tell the staff what is going on and why? Where will they be reassigned? How will you assure them they will be taken care of? Who will handle this?
- Will there be a special promotion for staff to keep business that might leave, such as cash incentives for deposits retained?
- Do you have a system to ascertain, at certain periods up to a year after the consolidation, how much business was kept or lost and why?

Many banks believe a 5% loss is realistic. Some banks, with cash incentive plans for their branch staff, have kept a surprisingly large percentage of business. Many have learned that the branch manager must make personal calls on the largest depositors and borrowers. Having staff members telephone other good customers is a positive way to follow up the initial announcement of the change.

The staff must have a positive attitude about the move and demonstrate it to all customersin the period before relocation.This could be a very "down" time, but given the right atmosphere, with everyone understanding and believing the rationale behind the decision, some excitement and fun can be put into the project.

The staff in the new or alternative facility must be equally pumped up, welcoming their transferred customers as longtime friends. These customers must be given special treatment, with particular attention paid to their needs. Most people will accept change if it is pleasant, positive, and rewarding. That's the biggest role of the bank's employees as they manage this change.

The name of the game in closing a branch is care and attention to customers and staff who are affected. Employee morale is at stake. And service quality is an outgrowth of employee morale, good or bad.

Sooner or later, your bank may have to make the tough decision to close a branch. Marketing then plays a very important role in how well customers are treated and how much business is kept.

Determine your strategies far in advance. Get your tactics down pat. Produce a schedule of work and a timetable for each activity. Get a budget that will do the right job. This is not a time to save $100 and in so doing lose thousands of dollars in deposits or hundreds of good borrowers.

Closing, consolidating, and downsizing a branch is not as easy, or as much fun, as opening a new facility. The marketer, however, finds it is more of a challenge and more demanding professionally. More important, this is another of those times when skillful marketing can make a major difference in the end result. ■

Mr. Pope is senior vice president of marketing at Valley National Bank, Phoenix.

FLASHBACKS

What made news in the *American Banker* this week...

40 Years Ago

- Allan Sproul, president of the Federal Reserve Bank of New York, told a joint congressional committee that he did not believe the Federal Reserve needed additional powers to control inflation.

20 Years Ago

- Banks in the District of Columbia were charged with contributing to racial unrest by using a double standard in making loans to black applicants. In a report on April riots in the nation's capital, the city council said there was "substantial evidence indicating that the major local financial institutions, especially the banks, [used] a double standard in their credit policies . . ." Robert K. Koontz Jr., vice president of Security Bank in the District of Columbia, said "I have been in the banking business here since 1938, and I have never seen an application for a loan denied for that reason."
- Wachovia Bank and Trust Co. announced it would convert to a national charter. The Winston-Salem, N.C. bank said the switch was part of a reorganization in which it would become the major subsidiary in a one-bank holding company.

10 Years Ago

- Out of 20,500 employees eligible to do so, 226 minority and female employees or former employees of Crocker National Bank, San Francisco, filed job discrimination complaints under terms of a consent decree that ended a 1975 class action suit on behalf of 20,500 people who had worked for Crocker since 1973. Under the decree, employees had been given an April 15 deadline to file race or sex discrimination complaints. The decree in effect required each past or present employee to prove he or she was discriminated against before collecting any compensation.
- The Connecticut General Assembly failed to act on a bill that would have required all consumer contracts of $50,000 or less and all insurance contracts to be written in simple language. The measure required that every written contract use common words, avoiding such phrases as aforesaid, heretofore, and whereas. It called for the use of personal pronouns such as "I" and "you" instead of impersonal words or phrases such as "party of the first part." David Beizer of the Connecticut Bankers Association said the group supported "the concept of simple language," but said the bill had "a lot of problems." "I don't think that a simple language contract, like morals, can be legislated," he said.

5 Years Ago

- An American Banker survey showed that Citicorp chairman Walter B. Wriston became the first commercial banker to break the $1 million barrier in executive compensation. He earned $1,156,650 in salary and bonuses in 1982.
- The House of Representatives passed a bill authorizing $760 million in federal loans for jobless homeowners facing mortgage payment problems. The bill, which was opposed by the Reagan administration and by lenders, was considered a long shot for passage.

1 Year Ago

- Thomas A. Cooper resigned as president and chief operating officer of BankAmerica Corp., saying he wanted to "pursue other business interests." Sources at the bank, however, said they believed Mr. Cooper's decision was a result of clashes between himself and A.W. Clausen, who took over the No. 1 spot at the San Francisco bank in October.
- Calling home equity credit lines "land mines" threatening American home owners, consumer groups urged Congress to require lenders to disclose more information about loan terms and set caps on rate increases.
- The Securities Industry Association asked a New York appeals court to stay a Federal Reserve Board decision granting limited securities powers to three bank affiliates.

COMMENT

Written loan policies can mean the difference between success and disaster in operating a bank, writes consultant John T. Morris. — 4

THRIFTS & MORTGAGES

The East Coast operations of First Nationwide Bank will get a boost from the opening of a Cherry Hill, N.J., branch. — 10

Two Texas thrift mergers are imminent, revealed John H. Rousselot, president of the National Council of Savings Institutions, after he phoned Bank Board Chairman M. Danny Wall from the pressroom of the group's Toronto conference. — 10

The potential for takeover of a depository institution can be identified through such considerations as market characteristics, writes Jerome I. Baron in the Observer column. 12

Worth Repeating

Consistency argues powers for all.

Federal Reserve Board Chairman Alan Greenspan, commenting, after a speech, that S&Ls should get whatever expanded powers are given to banks. [Page 1]

S&L Report Card: Who Won, Lost

By LINDA ELLIS

NEW YORK — Home Savings of America, Irwindale, Calif., was the biggest earner among thrifts last year, according to an *American Banker* survey of profit and loss at savings institutions.

This despite that yearend 1987 earnings of $202.7 million at subsidiary H.F. Ahmanson & Co., Los Angeles, were 39.8% lower than the year before.

Western Federal Savings and Loan Association, Dallas, lost the most money in 1987 — $885.3 million — and is now under a management consignment program. The second heaviest loser was Financial Corpor. on of America's American Savings and Loan Association, Stockton, Calif., with red ink amounting to $467.5 million.

The ranks of profit-making thrifts dwindled last year as the industry lost a record $6.8 billion, compared with earnings of $132 million in 1986.

At yearend 1987, according to the Federal Home Loan Bank Board, 66% of thrifts were profitable, or 2,089 of 3,147. That was down from 73% showing positive net income at yearend 1986.

Top Thrift Earners

People

Bill Simon's Man in Honolulu

By JEFFREY KUTLER

HONOLULU — Like many chief executive officers, the chairman of Honolulu Federal Savings and Loan Association hangs mottos on his office wall to impress the corporate mission upon colleagues and visitors.

The most prominent of several signs in Gerald Czarnecki's office reads: "We are not in the service business. We are in the business of selling services."

Nothing very unusual there, except that Mr. Czarnecki came to his job from what most resume readers would characterize as a bank-operations background. Without forsaking the need for technical competence, he has become a fervent believer in sales and marketing, and he is aiming to reshape an entire $2 billion-asset S&L around those functions.

It is a prodigious undertaking. Not only is Honolulu Federal on the mend after a close brush with failure, but Mr. Czarnecki's bosses also are some of the

'We need to do a better job of selling.'

Fed Chief Backs New Powers For S&Ls, Too

Says Banks and Thrifts Should Be Treated Alike

By RICHARD RINGER
Midwest Bureau

CHICAGO — Federal Reserve Board Chairman Alan Greenspan suggested on Thursday that savings and loans should get whatever expanded powers are given to banks.

"Consistency argues powers for all," Mr. Greenspan said in response to a question following a speech in which he once again urged Congress to provide expanded powers for banks.

Mr. Greenspan did not elaborate on his comment about new powers for thrifts. His suggestion, however, differs from congressional testimony by M. Danny Wall, chairman of the Federal Home Loan Bank Board. Mr. Wall has said it would be inappropriate for Congress to consider giving federally chartered thrifts expanded powers until the financial problems of the Federal Savings and Loan Insurance Corp. are resolved.

In his speech at a Federal Reserve Bank of Chicago conference on the restructuring of the financial services industry, the Fed chairman said there are indications that the banking industry's profitability "is unlikely to be maintained." He urged broader powers for bank holding companies as a way for them to remain competitive.

Mr. Greenspan warned, however, that profits from new bank powers will not be substantial.

"Moreover, it does not seem likely, thanks to the competitive nature of the U.S. financial system, that there are ab-

What's the Big Deal About Developing Written Loan Policies?

By JOHN T. MORRIS

THE OFFICE of the Comptroller of the Currency recently released the results of a very interesting study. The purpose was to identify and classify the root causes for the failure of 162 national banks in the United States since 1979.

The conclusion of the Comptroller's staff — which is not all that earth shattering — was as follows: "The most often observed problems in these failed banks involved the lack of policies and procedures or the failure to follow them. This suggests that establishing and adhering to policies and procedures is important to a bank's success."

Obvious, right? But if it's so obvious, why do so many bank managements continue to go along day to day, year to year, without expounding even the most basic of loan policies?

I would go a step further. An even larger number of banks may have a semblance of loan policies in the minds of a few key managers. But they are still reluctant to publish even an outline of what they think their loan policies are. Why do so many bank managements resist putting loan policies in writing?

This article lists some of the more common reasons banks give for not developing written loan policies. Each of these reasons is in reality a nonsensical excuse that will eventually lead the institution into disaster.

Loan policies that are constantly being revised out of necessity are probably poorly written in the first place.

One of the most common reasons so many banks are reluctant to publish written loan policies is that management does not want to face the inevitable internal dissension and controversy. For example, loan policies normally define what types of risks are acceptable for the bank to assume.

Now if you or the area you're responsible for happen to be affected adversely by what is defined as "unacceptable," you undoubtedly will fight hard to change the definition — or at least try to loosen it up a little. If you are unsuccessful in your battle on this front, you will then probably try to affect your peers' areas adversely, to even out the internal playing field a little.

It turns into a political battle. And political battles are usually neither particularly productive nor healthy. But I contend that the dissension and controversy that grows out of developing written loan policies is of the healthiest kind.

Dissension Can Be Healthy

Deliberating loan policies is one of the most educational and insightful processes that can occur at any level of bank management, from the board on down. Reading a bank's loan policy conjures up the clearest image of the direction senior management wants to take an institution. Now that's where the rubber truly meets the road.

Another commonly mentioned reason for failing to develop written loan policies is that they usually end up being too restrictive. Written policies are certainly much harder to change than oral directives — the cast-in-concrete argument.

This argument says that one cannot possibly anticipate all the new types of loan requests that may arise. And most of these will prove to be acceptable risks anyway. When new situations actually do arise, they will have to be approved as "exceptions to policy" — or perhaps even the policy will have to be changed to accommodate. As a result, many of these new but acceptable situations just might take too long to win approval. Good business gets lost or turned away.

It should be possible to build into every written policy statement a mechanism for appropriately but quickly reviewing and making decisions on acceptable exceptions to policy. Exceptions to policy should be expected, not discouraged.

Whenever a particular aspect of policy becomes more the exception than the rule, it is probably time to change that aspect to reflect the real world more accurately. On the other hand, loan policies should be designed and written so that actual revisions are fairly infrequent. Loan policies that are constantly being revised out of necessity are probably poorly written in the first place and are possibly even more confusing than no written policies at all.

A corollary argument from the banks is that written loan policies sap the lending function's flexibility and imagination. Customers are turned off by constantly hearing their loan officer respond: "We just can't do it that way. It's against written policy."

Road Signs, Not Blinders

If the loan officers are saying this frequently — and they really mean it rather than just using the policies to hide their own lack of imagination — then the real problem is loan policies that are too specific, not that they happen to be in written form. Good loan policies should be like road signs that point the loan officer in the right direction rather than blinders that restrict the officer's vision to a very narrow, rigid path.

Another frequent argument against written loan policies is heard from a bank's chief executive officer who runs a one-man show: "I'm in charge here and I want to make all the decisions — including what is within policy and what is not. I don't want anyone but me trying to interpret loan policy around here."

Fine. If that's the CEO's wish and he's been given that prerogative by his board, let him operate in that fashion. But I don't agree with this approach.

I guarantee that it would be a lot easier and more productive for this type of CEO to write out the details of his credit philosophy. He can still make the final decisions.

Lacking written guidelines, everything — no matter how minuscule — must be referred to the CEO. How will he ever have the time or mental energy to handle the really meaningful credit policy matters? And how will the bank function if the CEO is called away or becomes temporarily incapacitated and there are no written guidelines?

Under this type of one-man regime it is common for a new lending officer to report for work and find no written loan policies to guide him. He therefore continues operating under the policies of his previous employer. And who knows how liberal those might have been?

If the new officer doesn't know what matters must be referred to the CEO, many times he won't refer anything — that is, until it's too late. Written loan policies let the new employee know from Day One what is expected of him.

Another commonly cited reason for not putting loan policies in writing is simply that bank management doesn't know what to include. This is probably the most valid of all the reasons I've listed.

But fear not! the Office of the Comptroller of the Currency has come to the rescue. "Comptroller's Handbook for National Bank Examiners" lists all the topics that should at least be considered for inclusion in a written loan policy.

This list can serve as an outline. Should the bank still need help, the Comptroller's staff certainly stands ready to assist.

In closing, let me point out the most disturbing argument that is often used to justify not publishing loan policies: It would merely be a big waste of time for the bank to put its loan policies in writing because no one follows the present oral policies, anyway.

Not taking established loan policy seriously is unfortunately a fairly common practice. The Comptroller's study alludes to this problem when it concludes that many banks fail because they do not follow closely enough their own loan policies and procedures.

I admit that developing written loan policies would indeed be a big waste of time if no one were serious about following them. But I am assuming that management is really serious about staying in business.

If a bank takes the step to formalize its loan policies, it should also take the steps to enforce them. Certainly some sort of monitoring system should be built into the loan policies themselves to ensure that they are taken seriously and followed closely. ■

Mr. Morris is president of J.T. Morris & Associates Inc., Weston, Conn., consultants to lending institutions.

BRIEF COMMENT

Citicorp's Caravan to Washington Seeks Legislative Clout

The following item originally appeared in the April 29 edition of the Washington Weekly Report, published by the Independent Bankers Association of America.

□

CITICORP has decided it wants to get close to the people. No, not *those* people. The *big* people. The very important people in Washington who decide the fate of the big banks.

Perhaps the biggest of U.S. banks sees storm clouds forming over the nation's capital, over such costly-to-Citicorp propositions as assessing Federal Deposit Insurance Corp. premiums on foreign deposits. Citicorp is sending 20 of its own down Interstate 95 two-by-two to build an ark.

Until now, Citicorp has relied on the assorted talents of the Washington law firm of Barnett, D'Amours, Sivon & Shay to plead its case. The company says that won't change, although the new office will handle legal and regulatory affairs. (Indeed, most big banks have abandoned proprietary D.C. offices in favor of farming out lobbying chores to law firms, Bill Isaac's Secura Group, etc.)

Citicorp has instead opted for hands-on involvement. The hands are attached to Charles Long, an executive vice president of Citicorp who is a part of chairman John Reed's inner circle. Steve Hopkins, the bank's director of government affairs, is the second member of the caravan to be named.

Neither of these men are rubes; they are savvy, no-nonsense types who would probably like nothing better than to cultivate a reputation for walking on water without getting their argyles damp.

Around town, Citicorp & Co. is being viewed more as an embassy than an ark. And rightly so.

Citicorp is as foreign a form of life as one is likely to find in this international city. Perhaps it will attempt to dodge assessments on foreign deposits with claims of diplomatic immunity. ■

Data sources: Primary source is American Banker questionnaire sent to the 400 largest thrifts in the nation. For those thrifts not responding to the American Banker, data from the Federal Home Loan Bank Board and the Federal Deposit Insurance Corp. were used. These data were provided by **ADP Data Services Division, New York.** ADP has two thrift data bases for thrifts: (1) Its data base of thrifts reporting to the FHLBB on the "Quarterly Financial Report to the Federal Home Loan Bank Board." Virtually all of these thrifts are FSLIC-insured. To obtain a net income figure for calendar 1987 using the FHLBB data, current net income for each the four quarters of the year are summed. (2) Its new data base of savings banks reporting to the FDIC on the quarterly "Consolidated Reports of Income and Condition for Savings Banks." All the institutions in this data base are FDIC-insured. A dagger **(†)** indicated FHLBB data were used, and a double dagger **(‡)** indicates FDIC data were used. **Net Income** is income after taxes but before extraordinary items. It is total income (operating plus nonoperating) minus total expenses (operating, nonoperating, and income taxes) for calendar years 1987 and 1986, unless otherwise noted. **ROA**— return on assets, or net income for 1987 divided by total assets on 12/31/87. **(a)**— Formerly Bayamon Federal S&L Assn. **(b)**— Formerly First Federal Bank of Connecicut. Changed title and insurance (from FSLIC to FDIC) in January 1988. **( )**— Indicate a net loss in the net income column and a percentage decline in the percent change column. **(1)— An FDIC-insured institution. (2)—An FSLIC-insured institution.**

Number of Thrifts Posting Gains Dwindled in '87

➝ Continued from Page 1

The 33% of the industry that was unprofitable last year lost a total of $13.4 billion. Nationally, 345 thrifts are insolvent, the Bank Board said.

Only one institution among the 50 that lost the most, Meritor Savings Bank, Philadelphia, is insured by the Federal Deposit Insurance Corp. All the others are covered by the Federal Savings and Loan Insurance Corp. Meritor, which lost $395.8 million, blamed the higher cost of funds as well as lower earning assets due to what the company called a "strategic shrinking" of the balance sheet.

50 Largest Thrift Losses
Table on Page 20

According to the *American Banker*'s survey, Texas and California accounted for a significant number of losers and winners, respectively.

The survey shows a disproportionate number of Texas thrifts in the loss column, 8 out of the top 10. California is home to 7 of the 10 most profitable thrifts as rated by net income.

Even among the most profitable thrifts, however, the results for the year were lower, sometimes sharply, from 1986. Great Western Bank, Beverly Hills, Calif., is second in profitability but its net fell 35.6%. Glendale Federal Savings and Loan Association, Glendale, Calif., with the third highest net income, and California Federal Savings and Loan Association, Los Angeles, with the fourth highest, are the only thrifts among the top 10 earners that registered improvement in 1987. Glenfed's earnings would have been even higher, the company said, except for one-time expenses associated with the acquisition of Guarantee Savings, Fresno, Calif.

Between the coasts, regional thrifts had ho-hum results for the most part. Earnings were depressed in the Midwest for the same reasons they were elsewhere: competitive pricing of deposit rates and new mortgages, reduced gains from the sale of loans in the secondary markets, and new accounting standards.

Among 70 predominantly eastern and midwestern thrifts, the return on assets in 1987 tumbled to 0.43% from 0.72% in 1986, a consequence of negative nonoperating results, according to Sanford Rose, an associate editor of the *American Banker*. Last year, for the first time in five years, nonoperating expenses, which include mark-to-market losses on mutual fund investments and loan-loss provisions, exceeded nonoperating income.

For the industry as a whole, including all 3,147 insured thrifts, net operating income was $3 billion, compared with $4.6 billion in 1986, according to the Bank Board. Nonoperating losses were $7.1 billion, versus $1.3 billion in 1986.

An increase in the provision for loan losses to $10.9 billion from $8.6 billion reflected an incentive to take losses under the Tax Reform Act of 1986. ■

Riggs Sells Mexican Loans

WASHINGTON — Riggs National Corp. said its Riggs National Bank unit sold $22.2 million of Mexican loans for about $14 million.

The bank said it did not realize any loss on the sale because reserves for the loans had been established in prior periods. It did not identify the buyer of the loans.

With the sale, Riggs said its total "problem country exposure" had been reduced to $66.5 million, or 1.1% of assets, from $107 million, or 1.7% of assets, as of Dec. 31, 1987. ■

Greenspan: Grant New Bank Powers to S&Ls

➝ Continued from Page 1

normally high profits in very many markets now closed to banks just waiting to be captured by banks once new powers are granted," he said.

Mr. Greenspan has long favored repeal of the Glass-Steagall Act.

"Of all the possibilities for expanded bank powers, repeal of Glass-Steagall is the most consistent with addressing the fundamental market and regulatory developments undermining the long-run health of the U.S. banks."

The Fed chairman reiterated his support of the blanket authorization of securities powers contained in a Senate-passed bill drafted by Banking Committee Chairman William Proxmire.

"I believe it would not be useful to grant only specific, limited securities powers to banking organizations, since that runs the risk of product obsolescence as market innovations and technological change continue," said Mr. Greenspan.

In his speech, he also repeated the Federal Reserve Board's assertion that any new powers given to banks should be conducted through subsidiaries of a bank holding company. He said that the Fed believes bank holding companies should not be regulated by function.

"So long as some portion of a holding company has access to the federal safety net," said Mr. Greenspan, "our view is that it would be inappropriate to abandon the holding company to a piecemeal regulatory structure that leaves no agency responsible for seeing that the activities of the organization as a whole don't impose undue risk on the depository system."

The Fed chairman said that economic and competitive factors have eroded bank earnings, and that the factors contributed to a fivefold increase in loan-loss provision in the 1980s and a near tripling of net chargeoffs.

While some banks remain profitable, Mr. Greenspan said, a decline in aggregate bank earnings has resulted from "the deteriorating credit quality experienced by most money center banks, and the large number of banks west of the Mississippi [that are] heavily committed to energy, agriculture, and real estate credits."

Other financial companies that provide credit have taken away some of the banks' best customers, said Mr. Greenspan. While "the highest-quality business borrowers have been attracted away from banks to the money and capital markets for direct financing, the banking system has found its remaining customers to be less creditworthy than earlier in the postwar period," he said. ■

First Nationwide Corp. Expansion Moves East

➼ Continued from Page 10

branch within five or six miles of one or several K mart stores; the spokes are the offices within the discount retailer.

The company recently opened New York State hubs in Syracuse and the Albany area, the latter circled by four K marts. In King of Prussia, Pa., 11 K marts surround the hub.

Overall, Mr. Kaiser is responsible for retail operations in Florida, Maryland, New Jersey, New York, Pennsylvania, and Virginia. The 115 branches (51 in K mart stores) now are generating 38% of First Nationwide's $18.8 billion in assets. The Cherry Hill office will be the flagship operation in New Jersey.

East Coast Move in '81

The East Coast move began in 1981 with the acquisition of West Side Federal Savings and Loan Association, New York. Later that year, First Nationwide bought Washington Federal Savings and Loan Association, Miami. In 1987, the company opened branches in K mart stores in the East.

Because the Bank Board grants branching rights in three states to an acquirer that takes over a troubled thrift, First Nationwide gained branching rights for Illinois, Michigan, and New Jersey when it purchased the troubled Lincoln Federal Savings and Loan Association, Louisville, Ky., in December 1986.

"Our marketing focus is consistent; it's a statement we make very clearly," Mr. Kaiser said. "We serve the middle-income, middle-class customer. And draw a line under service.

"Our slogan is 'Respect, concern, and understanding: Don't worry, you'll get used to it,' and we really mean it," the executive said. "We make you feel like a human instead of a number. The secret is developing loyal customers who will use all our services rather than jump from bank to bank."

He notes, however, that customers in New York and Florida are particularly rate-conscious. The money in those two states, he said, is hotter than in other parts of the country.

"We push service, the vast array of products, and the network," he said, referring to the First Nationwide Network, a franchise for independent savings institutions. "You can bank anywhere — just about. And we continue to have our mergers and acquisitions team looking out beyond K marts, looking for acquisitions. We're not married to K mart, as we look throughout the East Coast for partners.

"A K mart branch is very striking," Mr. Kaiser said. "It doesn't look makeshift. It's real marble and looks like it's been there for years. We're expanding services within the K marts. In Virginia and Maryland, we're offering a full range of investment products."

First Nationwide, which pioneered the adjustable-rate mortgage in the early 1980s, is selling its ability to provide national banking services to customers. The 55 members of the First Nationwide Network have combined assets of $36 billion, with approximately 800 branch locations in 39 states. The network is separate from the retail branches. ■

Operating . . .

➼ Continued from Page 14

billion-deposit Bank of Hawaii and the $3.3 billion-deposit First Hawaiian Bank, both in Honolulu.

Real estate development is a new venture for Honolulu Federal. It is currently building three facilities in an industrial park and seeking financing for an office building in Honolulu.

Mr. Czarnecki said he is preparing Honolulu Federal for the long haul. He said this also describes the type of commitment he has received from the Simon investment group.

Honolulu Federal has already begun yielding profits for H.F. Holdings Inc., the company that Mr. Simon and his partners set up to serve as 'the thrift's parent. Out of $6.9 million in 1987 net income, the S&L paid its owners $2.25 million in dividends last year, or more than 10% of the $17.5 million in cash they used to purchase the institution in November 1986. (The cash was in addition to $40 million in subordinated securities.)

But Honolulu Federal has only just begun to turn itself around. Most of last year's profit, which set a company record, came from selling off assets including repossessed real estate. Future profits will also be depressed by the gradual amortization of more than $100 million worth of goodwill left on the balance sheet at the time of the Simon group's takeover.

It will be up to Mr. Czarnecki and his marketing efforts to deliver new and sustainable streams of earnings. ■

LEGAL ADVERTISING

Notices of Foreclosure

SUPREME COURT - COUNTY OF BRONX. Lend-Mor Corporation, Plaintiff against Anthony Brown, et al Defendant(s). Pursuant to a judgment of foreclosure and sale, entered herein and dated February 3rd, 1988, I, the undersigned Referee, will sell at public auction at the Bronx County Courthouse, 851 Grand Concourse, Bronx, N.Y., in Room 118, Mezzanine, on the 6th day of June, 1988, at 12 Noon, premises briefly described. On the south side of 223rd Street, 142.51 feet west of White Plains Road, being a plot 114.31 feet by 20.54 feet and known as 682 East 223rd Street, Bronx, N.Y. Approximate amount of lien $69,066.90 with interest and costs. Premises will be sold subject to provisions of filed judgment, Index Number 16071/87. Dated: May 12th, 1988, Stephen B. Kaufman, Referee. Philip Irwin Aaron, Attorney(s) for Plantiff 400 Jericho Turnpike, Jericho, N.Y. 11753.

Massive Loss At Texas S&L May Not Be Last

'Big Blips' Expected At Other Sick Thrifts

By DAVID LaGESSE
Southwest Bureau

DALLAS — Regulators last week revealed that a Texas thrift suffered a staggering $1.2 billion loss in the first quarter. Industry experts reacted by saying the worst may be yet to come.

Sources said the loss occurred at Sunbelt Savings Association of Texas, Dallas. Sunbelt chairman Thomas Wageman would not confirm or deny the reported loss, but he said nobody should be surprised at big losses at other thrifts nationwide.

To support his statement, he cited a combination of regulatory and accounting changes that will force thrifts to follow generally accepted accounting principals instead of the more liberal rules thrift regulators previously allowed.

"All the Band-Aids are going away," Mr. Wageman said.

While future one-time losses at thrifts may not reach $1 billion, "big blips will appear at a number of institutions," said Edward Montgomery, Dallas-based chairman of the thrift accounting group at Arthur Young & Co.

Sources say Sunbelt also enjoyed leniency from regulators in fully recognizing its losses. Mr. Wageman took over management at Sunbelt in 1986. Regulators had forced out Edward T. McBirney, the former chairman, because he had filled Sunbelt's portfolio with high-risk commercial real estate.

A number of thrifts, like Sunbelt,

American Banker Special Report

Top Mortgage Firms Record Hefty Increase in Servicing

By PHIL ROOSEVELT

NEW YORK — The nation's major mortgage companies posted a sharp 23% gain in their servicing portfolios last year, reflecting near-record originations and brisk purchases of servicing from smaller, often troubled firms.

In the *American Banker*'s latest survey of servicing, the top 100 mortgage companies said they were servicing $567.6 billion in home loans at the end of 1987, up from $461.2 billion a year earlier. Companies with servicing gains outnumbered losers by a margin of more than 4 to 1.

St. Louis-based Citicorp Mortgage Inc., reorganized last October to handle all the servicing of parent Citicorp's sprawling mortgage operations, easily led the pack at yearend, with a portfolio of $44.4 billion.

Servicing, long the most lucrative part of mortgage banking, entails collecting payments from borrowers and

Capital Adequacy Plan Under Fire

Citicorp, ABA Go on Record Requesting Revisions

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Citicorp last week endorsed new capital standards for banks but told federal regulators that the risk-based capital proposals should not touch bank holding companies or their nonbank subsidiaries.

"Such an extension would make U.S. banking organizations less competitive, make bank subsidiaries of bank holding companies less sound, and increase the strain on the federal safety net," Citicorp said in a statement to the Federal Reserve Board.

The nation's largest bank conceded that changes in capital requirements are inevitable and even necessary. But Citicorp requested numerous revisions to the risk-based capital guidelines drawn up by regulators in 12 countries.

The American Bankers Association generally agreed with Citicorp. But in its letter to the Fed, the trade group said that while accepting the theory behind risk-based capital, "our members continue to believe that the banking system is adequately capitalized and until . . . the banking agencies can

Personnel Training Offers Unexpected Benefits

By DR. PAUL S. NADLER

AFTER VISITING the human resources department of a major financial service institution, I am reminded of the man who said, "I make the major decisions in my home, and my wife makes the minor ones. I decide what we should do about American-Soviet relations, and she decides where we live and where the kids go to school."

Mutual Benefit Life Insurance Co. in Newark, N.J., is a financial institution that has advanced its development and training programs well beyond the level of most banks. A visit to the top people in the company's human resources department shows that the skills their program teaches that truly help the organization are not things like understanding insurance, risk management, or the like, but basics like phone manners, time management, clear writing, and performance appraisal skills.

How does it work?

I talked with Christine Ertle, manager of Mutual Benefit's human resource development department, and two of her full-time consultants, Beverly Kagan and James Fortier. I learned that courses run continually in several well-equipped classrooms, and that each of the four people in the department must be prepared to teach all of the skills mentioned above plus others, including new skills that management deems necessary. This might seem like an impossible job, but as Ms. Ertle points out, the teaching mainly is common sense and logic. Her staff members need to be "people persons" more than knowledgeable educators.

Nadler Says:

Employees who attend classes with people from other departments learn about the rest of the company and that they are not the only ones with problems.

As evidence of this, she notes that most of the people who have worked in training, including herself, have come from other areas of the company and were pulled into human resources because of an enthusiasm for being with people and an ability to communicate.

Ms. Kagan was working elsewhere in the company when human resources spotted her as a potential trainer while she was a student in a short class. Ms. Ertle herself already had seven years in another function when management decided she would be a natural for human resource development work.

Role of Top Management

What was the role of top management in developing this department?

At the beginning, it was to give its blessing and have the human resource people go around the company to discover what managers' needs were and to develop programs to meet those needs.

Management found unexpected blessings in this approach. For example, the human resources department was told repeatedly that the company needed to train people in telephone skills — to get them to learn quickly what callers (from both inside and outside the company) wanted and to handle their requests.

From that, they learned the staff really needed to understand what services they were providing to the public and to the rest of the company. Only after they knew the big picture could they truly be skilled in phone contacts. In essence, then, the course in phone skills gave employees an understanding of what their jobs were all about.

A second unexpected benefit of the training programs was that employees who attended classes with people from other departments learned about the rest of the company and also discovered that they were not the only ones with problems.

So after coming to a class, say, on writing skills, a person in claims could be more sympathetic with someone in sales or investments, even though the basic goal of the class was to learn that in writing, clarity and brevity are important.

Even in classes with students from the same department, discussions reinforced skills other than the ones being taught and expanded each student's knowledge of what other people in the area do and need in the way of support.

Training Pitfalls

But training has its pitfalls.

What happens when a training class erupts with complaints about certain managers and practices? Is it the function of the trainers to tell top management?

Ms. Ertle points out that if she or any of the staff violated the confidentiality of the classroom and told management about the complaints, naming names, they would never be trusted again. Mutual Benefit, like most banks, has a strong network, and people would quickly learn what was going on with regard to complaints and recommendations.

Similarly, if a student does poorly in a class, it is not the trainer's job to tell his boss, because no one would want to risk the chance of hurting a career because of classroom behavior or ability.

Certainly, if a problem comes up again and again, the human resources people have to tell management in some way — trying to insulate completely the people who complained.

These are side benefits to the training programs. But, as Ms. Ertle explains, "trainers have to have some management orientation and think somewhat like managers rather than just like employees. Because people who do think like employees often find every policy of management needs criticism and improvement — they do not have the perspective to see when a complaint is worth taking upstairs and when it is not."

Courses can be useless at one time and a real boon at another. For example, a creativity course is valuable when a new product is being offered and people need new knowledge and approaches. Otherwise, sending someone to a course on "creativity" without some specific tie-in might be insulting, because an employee might wonder, Why does management feel I need this?

On the other hand, situational leadership — teaching people how to work with subordinates and how to explain what the subordinate's job really entails and performance appraisal are courses that can be offered at any point in a person's career. Here the attitude of the training people is that these are continuing programs — you evaluate people regularly and tell them when they are doing a good or bad job. This helps them grow. If you wait and evaluate only once a year or half year, an employee has no idea how he is doing in the meantime. Both the individual and the boss could be in for rude shocks.

How does human resources learn its job? As indicated, part is common sense and an innate ability to work with people, part is visiting other organizations to see how they do programs, part is research on developing curriculums for new programs (the area that brings the greatest gleam to Ms. Ertle's eyes), and part is buying programs from outside vendors.

But all three people interviewed at Mutual Benefit stressed repeatedly that the key to all this lies with top management. If top management is not behind training, then it is looked at as a boondoggle — just a way of getting away from the desk for a couple of days.

How can top management make training work?

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 18.

1. When fire struck the Los Angeles headquarters of First Interstate Bancorp, employees had been thoroughly trained in deploying the bank holding company's business contingency plan. They were able to reestablish computer operations quickly — without an apparent lapse in customer service — partly because they had been through a detailed disaster drill only a few weeks earlier. What type of disaster did the drill simulate?

Video Banking

2. Manufacturers Hanover Trust Co. recently cemented an alliance with Trintex to provide depository institutions with software and processing for home banking on the nationwide Prodigy interactive videotex service. Consumers will pay only a small portion of the cost of this service — a flat $9.95 a month, with no charges for connect time. What will be the main source of Prodigy's revenue?

3. When American investors scrambled to get their money out of stock market mutual funds after the October crash, most observers could envision only one likely destination for this flight to safety — interest-yielding products offered by banks and thrifts. According to data from the Federal Reserve Board, the Federal Home Loan Bank Board, and the Investment Company Institute, what was the actual safe haven of choice for consumer investments: a) banks and thrifts or b) money market mutual funds?

4. Approaching the era of uniform international standards for capital adequacy, a report by IBCA Banking Analysis Ltd., London, suggests that the financial institutions of one powerful banking nation may have to raise as much as $50 billion in equity in order to comply. Which nation's banking system has been found to be so severely lacking in core capital?

5. A recent study by Heidrick and Struggles Inc., a Chicago-based executive search firm, compared the pay for chief financial officers at Fortune 1,000 corporations, commercial banks, and diversified financial companies. Match these categories of employers with the following mean annual compensation for CFOs: $231,000, $330,000, and $292,000.

6. The ranks of profit-making thrifts dwindled in 1987, when the industry as a whole lost a record $6.8 billion. Identify last year's top earner among savings and loan institutions for 1987, with net income of $202.7 million as measured in this newspaper's annual survey.

7. A General Accounting Office study, released Thursday by Iowa Republican Jim Leach of the House Banking Committee, claims federal regulators have been unrealistically generous in the way they allow banks to value their loans to Third World countries. What yardstick did the accounting office use in recommending that banks increase their reserves for losses on these loans by at least $28 million?

— **Robert Paul Molay**

Top 25 Mortgage Servicers in Combined Servicing

Servicing Portfolios Swell at Nation's Top Mortgage Companies

➸ Continued from Page 1

performing other chores for mortgage investors. Mortgage companies and other types of mortgage bankers sell the loans they originate but typically retain the servicing, earning an annual fee of about 0.40% on the outstanding principal.

Last year's servicing gain by the top 100 — the largest percentage increase in four years — stemmed in part from extraordinary consumer demand for mortgages in the first half of the year, when interest rates dipped as low as 9%. Total home loan originations by all lenders reached $449 billion for the year, second only to $454 billion in 1986.

The 1987 originations, however, included far fewer refinancings by home owners than in 1986, meaning that many companies posted larger net gains in servicing volume, experts said.

In addition, a number of top 100 firms stepped up their purchases of servicing, if not of entire companies, as losses resulting from interest rate volatility forced thinly capitalized players to put assets on the auction block.

"The middle-sized companies had to disgorge themselves of servicing," said Angelo Mozilo, president of Countrywide Funding Corp., Pasadena, Calif. He cited frequent sales of servicing by companies with portfolios of $750,000 to $2 billion.

Countrywide itself bought $1.6 billion of servicing in 37 separate transactions between July and December. Combined with the company's own originations, the purchases propelled Countrywide to No. 20 in the rankings, up from No. 26 at midyear and No. 40 at the end of 1986.

Other companies grew quickly by acquiring whole firms. For example, Montvale, N.J.-based Chase Home Mortgage Corp., a unit of Chase Manhattan Corp., shot up 25 notches in the ranking, to No. 21, by purchasing Lyons Mortgage Co., Rolling Meadows, Ill., and Freedom Mortgage Co., Tampa, Fla.

Geoff Dreyer, chief financial officer at Chase Home Mortgage, said the acquisitions were part of a strategy to increase economies of scale in servicing. "We're finding that we're able to drop our unit servicing costs significantly," he said.

Citicorp Mortgage, formed from several Citicorp mortgage banking units, said its gains came chiefly through originations. With adjustments made for changes in the way the unit reports servicing, its portfolio jumped about 20% during the year. The $44.4 billion total, towering above the $24.5 billion of second-ranked GMAC Mortgage Co., includes servicing for loans held by Citicorp's thrift units, Citibank, and other investors.

"We would like to continue to grow our servicing portfolio, primarily from our own originations," said Robert Horner, chairman of Citicorp Mortgage. He added that he believes additional economies of scale in servicing lie ahead.

Home loan originations by Citicorp units last year totaled $13.1 billion, or about 3% of originations by all lenders, and the corporation has mapped out plans to capture 10% of the market originations by 1992. While Mr. Horner refused to reveal this year's volume, he did say, "We're pleased with what's going on."

This was the first year Citicorp Mortgage turned up on the mortgage company servicing rankings, because Citicorp's servicing was previously reported by other units.

In a ranking of the combined mortgage servicing operations of 25 parent firms, however, Citicorp grabbed the top spot in 1986, overtaking GMAC Mortgage, Elkins Park, Pa., and Lomas & Nettleton Financial Corp., Dallas.

Citicorp held the lead in that ranking in 1987. But Fleet Financial Group, Providence, R.I., supplanted GMAC in No. 2, lifted from No. 4 by a yearend merger with Norstar Bancorp, Albany, N.Y.

In a separate ranking of thrifts, Standard Federal Savings and Loan Association, Gaithersburg, Md., shot up to No.2 from No. 7, continuing a growth surge that has seen its servicing portfolio increase nearly fivefold since 1984, to $11.2 billion. ■

Funds Transfer Group Plans Managers' School

WASHINGTON — The Electronic Funds Transfer Association will hold its fourth annual School of EFT Management from July 24 to 29 at Northwestern University, Evanston, Ill.

The week-long program is designed for current and potential payment-systems managers, according to Robert A. Mooney, chairman of the Washington-based association and president of J.C. Penney Systems Services Inc., Dallas.

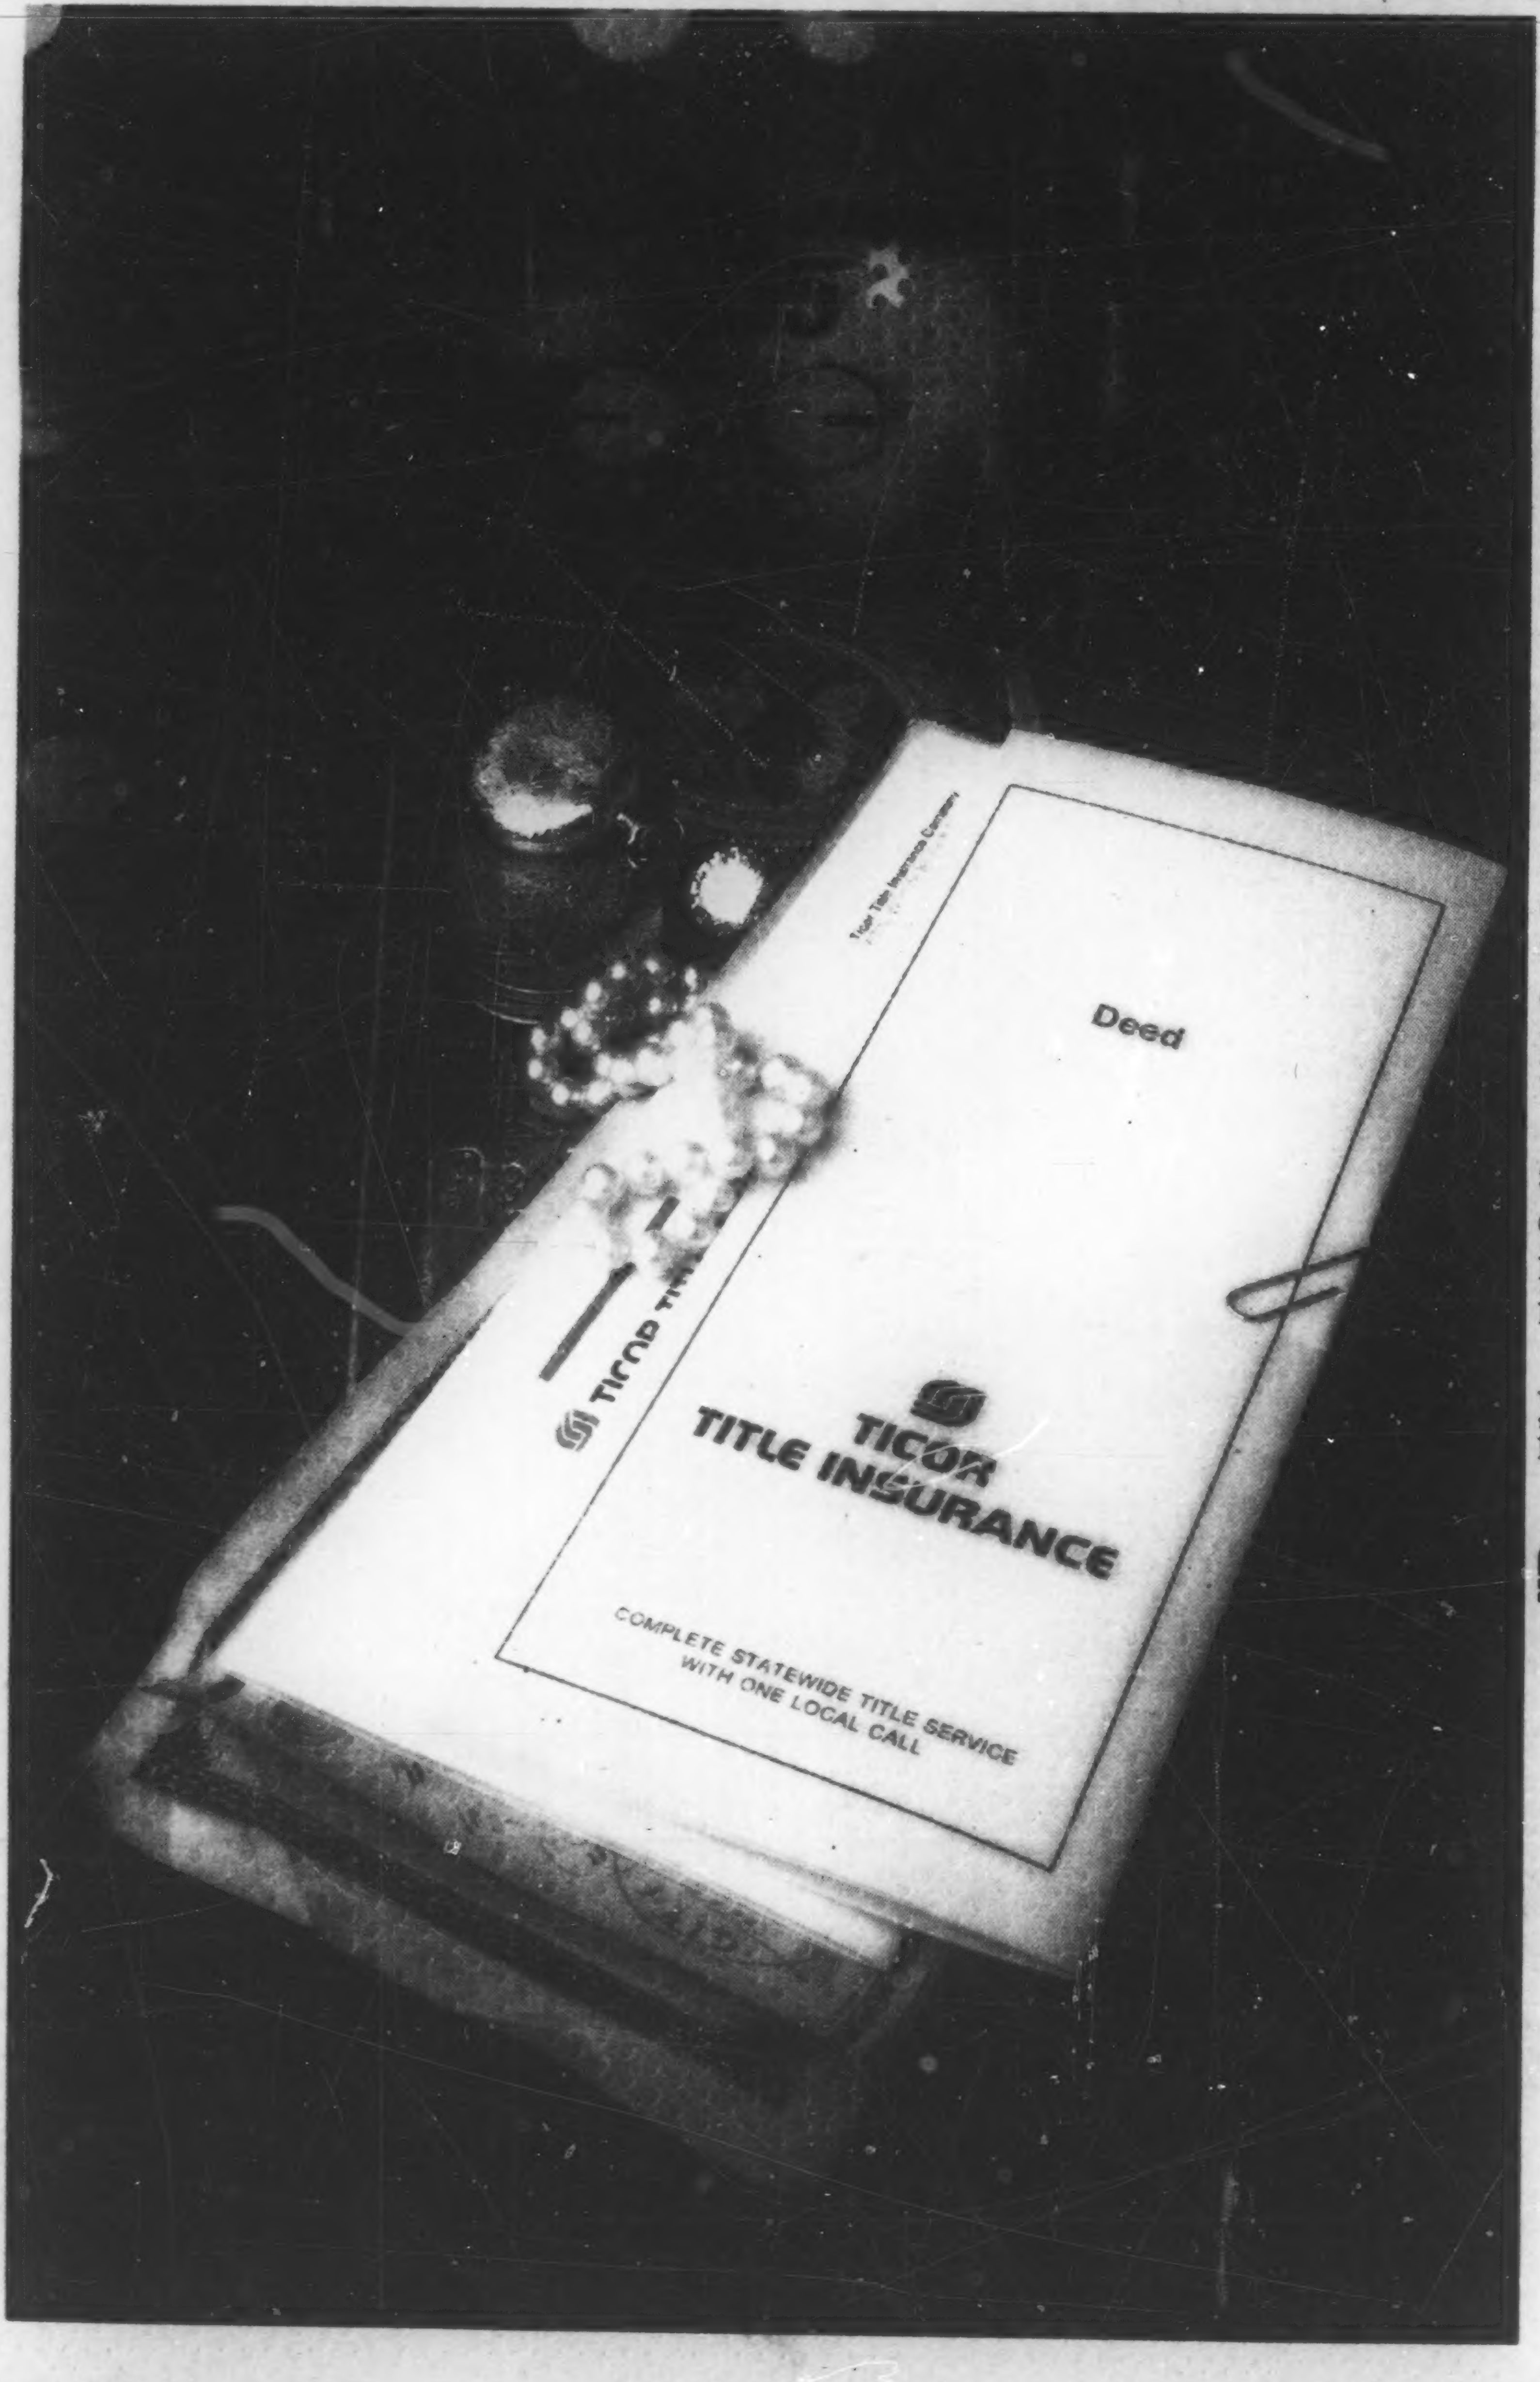
Faculty members include David A. O'Connor, president of Internet Inc., a regional electronic banking network in the Washington area; James M. Grant, senior vice president, First National Bank of Chicago; O. Tom Thomas, vice president, U.S. League of Savings Institutions; and John J. McDonnell Jr., president, Digital Radio Networks, Vienna, Va.

For further information call the association at 202-659-2100. ■

Strategic Dates
Dec. 31, 1989

FORBEARANCE DEADLINE: Today is the last day U.S. banks can apply for the capital forbearance program run by federal regulators. The program provides temporary relief to banks in economically depressed sectors. It was originally intended to help agricultural and energy banks. Now, however, any "well-run bank experiencing financial difficulties" may apply, according to the FDIC and the Office of the Comptroller of the Currency. Recently, regulators eliminated the 4% fixed minimum capital ratios required from banks who wished to enter the program. Banks that have been accepted must provide an acceptable plan for restoring capital. They must also file annual progress reports regarding their plan. The program ends on Jan. 1, 1995.

Make Sure Your Title Insurance Company Is As Sound An Investment As Your Property.



With all the time and effort you have put into researching your real estate investments, how much do you know about the title insurance company that will be protecting those investments?

At Ticor Title, we have been insuring title for close to 100 years. We are one of the oldest and largest title insurance companies in the country, with a reputation based on financial strength, personal service and underwriting expertise.

So when you are considering an investment, consider how sound an investment your title insurance is.

If it's from Ticor Title, you know you'll be dealing from strength.

Data Source: American Banker questionnaire to the top 200 mortgage companies and commercial banks in mortgage servicing. **Description of table:** A ranking of individual mortgage companies and commercial banks based on the dollar volume of mortgages serviced for investors. **Dollar Volume of Mortgages Serviced:** permanent commercial and residential real estate mortgages serviced for investors. Excludes mortgages owned by the institution, as well as forward commitments, home improvement loans and all temporary financing, such as construction and development loans. **Number of Mortgages Serviced**: are the number of loans associated with the volume reported. **Number of Investors Excluding Pools:** includes depository institutions such as thrifts and banks, pension funds, insurance companies, etc. **Number of Pools:** For 1987 this is the sum of GNMA pools, FNMA pools, and FHLMC pools. In 1986, firms were only asked to report the number of GNMA pools. Therefore, the 1987 and 1986 data on pools may not be comparable for some firms.

CORPORATE FINANCE

Insurance companies are increasing their investments — slowly — in employee stock ownership plans. ____2

Despite growing optimism in the nation's shipping industry, bankers who have survived bad times in the volatile business remain cautious. ____8

Jamie Stewart Jr., moving to his fourth bank in six years, takes on the task of consolidating investment banking at Mellon Bank Corp. ____8

Demand for merger-related credit will be greater this year than last, according to a Federal Reserve Board study, but companies will find some banks less willing to lend. ____9

Bankers Trust Co., New York, was the nation's leading loan buyer in last year's fourth quarter. ____ 12

Worth Repeating

Sure, there is a certain amount of resistance, but our resolve is like a steel wall.

James P. Simmons, chairman of Valley National Corp., Phoenix, on reports that the bank's cost-cutting efforts are meeting opposition from the rank and file. [Page 24]

Irving Wins Proxy Battle, Results Indicate

52-48% Vote a Major Blow to Bank of New York's Hostile Bid

By BART FRAUST

NEW YORK — Irving Bank Corp. has successfully fended off Bank of New York's bid to elect a slate of 16 directors to Irving's board, according to preliminary results of the proxy battle released Monday.

Irving's slate of incumbent directors received 7.7 million votes, or 52%, while Bank of New York's received 7.1 million, or 48%, the preliminary tally showed.

The vote is subject to challenge by both sides. Final results are expected to be announced on May 24.

Most analysts were left speechless by Irving's 600,000-vote margin of victory, which was a perhaps fatal defeat for Bank of New York's hostile takeover bid. Earlier, officials were told that the vote was too close to call, according to sources.

Analysts had been predicting that Bank of New York would prevail. But the vote is a big boost for a friendly bidder for Irving, Milan-based Banca Commerciale Italiana.

One banking industry analyst said that Bank of New York probably will not react to the defeat by increasing its offer for Irving. "They were already at the limit on dilution. The market wouldn't accept more," said Virginia A. Adair, vice president of Merrill Lynch Capital Markets.

In a statement, Irving said, "This vote of confidence in Irving's board is gratifying." The bank added that it is confident its proxies will withstand any challenges.

Bank of New York said: "We are disappointed that, based on the preliminary result of the proxy vote, it appears that our slate of nominees to the Irving board has been defeated. We are reviewing all our options, including termination of the offer."

Winning the proxy fight has been a major element of Bank of New York's eight-month-old takeover battle. A victory would enable the bank to force Irving to accept a merger, dismantle poison pills established by Irving, and waive a New York State law restricting hostile takeovers.

Stock prices of both Irving and Bank of New York rose in very active trading on the New York Stock Exchange. Irving finished at $60.625, up 25 cents from Friday's close. Bank of New York closed at $32, up $1.25.

Separately, Bank of New York said it has again extended its tender offer for Irving, this time until the end of business on Friday. The offer was scheduled to expire at the end of business last Friday.

As of last Friday, about 10.5 million Irving shares had been tendered to Bank of New York, representing about 57% of Irving's common shares. Bank of New York is seeking to buy at least two-thirds of Irving's outstanding shares. Bank of New York owns 4.9%

COMMENT

Talking Your Way To Higher P-E Multiples

By SANFORD ROSE

Chris Snyder, president of Loan Pricing Corp., New York, thinks that he has found a way for banks to increase their price-earnings multiples by as many as four points by just talking and not actually doing very much. Is he pulling our leg? Yes and no.

In conversations with bank analysts, Mr. Snyder has uncovered a profound sense of uneasiness. Analysts aren't being told the things they need to hear in order to do their jobs. Bank CEOs are making the same presentations to the analyst community that they habitually give to bank examiners. They talk in terms of return on assets, loan-loss reserve adequacy, etc.

The analysts don't want to hear this potboiler. They need information that will enable them to appropriately discount to present values the bank's income stream, particularly that being generated by the commercial loan portfolio, which to most analysts is a sort of black box.

Banks dilate on nominal returns, while analysts want to learn about

risk-adjusted returns. Are banks charging their business borrowers enough to cover the perceived risks? If they aren't, then high current nominal returns are a mirage, a fata morgana. These returns will deliquesce as surely as the winter snows.

Macro vs. Micro Risk

Banks have some funny attitudes about risk. They tend to equate it with the current strength of the borrower's balance sheet. Yet this is merely the micro risk.

The true risk of a loan, says modern portfolio theory, can be assessed only in conjunction with that of other loans in the portfolio. Lending to a borrower with a powerful balance sheet can be riskier than lending to one with a less impressive balance sheet if, for example, the "stronger" borrower is engaged in a business to which the bank is already heavily and perhaps excessively committed. Otherwise stated, true risk depends on covariance — the extent to which the business fortunes of a portfolio of borrowers are intertwined.

Analysts doubt that bankers really understand their macro or global risks. On the other hand, they have no doubt that bankers do an outstanding job of assessing and documenting balance-sheet or micro risks. But do bank charges reflect this meticulous analysis?

Mr. Snyder believes that they don't, and, what's more, he thinks that the analysts suspect as much. The chart on this page shows all-in bank spreads, which take into account raw spreads, fees, the value of required balances, and utilization rates, for a variety of credit extensions for six risk classes of customers, ranging from class 1, an excellent risk, to class 6, a substandard credit. The data show spreads over 90-day Libor for some 3,500 loans made by 30 banks.

Note the line labeled 30-bank average. This shows that the range of spreads earned by these banks is incredibly narrow. There is less than a 120-basis-point differential between the spread earned from a marginal borrower (class 5) and that earned from a good borrower (class 2). It would appear that banks are not pricing to adequately reflect differential balance-sheet risks.

A Point for Awareness

Notes Mr. Snyder: "My inquiries lead me to believe that if a bank went before the analyst community and simply drew this line, it would shortly be rewarded with a one-multiple upgrading of its price-earnings ratio."

To be sure, this statement is not to be interpreted literally. What Mr. Snyder means is that the analysts would be relieved to learn that the bank is aware of the absence of adequate pricing gradations in the industry. Since the bank was cognizant of this key problem, as many seem not to be, and was willing to discuss it frankly, that should be worth something to its stock price.

Now suppose that the bank, having agonized over the underpricing problem sufficiently, was considering a system which would lift its loan charges to the level described by the line labeled "My Bank" within, say, one year. If the bank could, with justice, present this second line to the analysts, that, opines Mr. Snyder, should serve to lift its multiple by another point, even though nothing tangible had yet been accomplished.

One way of gauging the adequacy of bank compensation for varying balance-sheet risks is by comparing the spreads charged by banks with those demanded by the bond market from the same type of customer. Loan Pricing Corp. arranged seven corporate bond ratings (triple A to CAA) into the equivalent of its six risk classes of corporate loans.

It then computed the spread over treasuries of comparable duration for bonds in each class. Finally, it converted these long-term spreads into 90-day Libor spreads by using prevailing swap rates.

The result is the topmost line on the chart. It shows that the bond market charges a spread differential of around 400 basis points between good credits (risk class 2) and marginal credits (risk class 5) instead of the 120-basis-point differential obtained by banks.

Left with the Detritus

As the chart indicates, a borrower who would receive a "2" rating from a bank is likely to get somewhere between an A and a BAA rating from the bond market. Such a borrower is being charged more for bank loans than bond credit, after the price of that credit has been converted to the equivalent of a 90-day Libor charge by subtracting 86 basis points — the swap rate — from the fixed bond rate.

By contrast, a loan customer who is rated "4" is likely to be accorded a grade of between B and CAA by the bond market. Such a customer is being charged appreciably more by the public market than by his bank.

In other words, as has been frequently emphasized, banks tend to overcharge their best customers and undercharge their poorer ones. Small wonder, then, that banks end up with the detritus of the borrowing community.

Of course, loans and bonds are different beasts. Banks, it is held, maintain rigorous oversight of borrower balance sheets, while bondholders do not. Thus, bank charges should be somewhat lower than bond charges. But should the differential be as wide as is revealed by the chart for borrowers with bank ratings of three and worse? Obviously not.

Says Mr. Snyder: "As the loan-sales movement gathers momentum, common investor groups will emerge who will be indifferent between buying groups of loans and groups of bonds. The wide disparity between loan and bond yields will then set the stage for an immense arbitrage. Banks that can incent their sales forces to demand prices that more appropriately reflect the risk perceived by the public credit markets will become arbitrageurs. Those that cannot upgrade their charges will become 'arbitragees.' "

Hence, ventures the New York consultant, if the bank in question is able to include this topmost line in its analyst presentation, its audience would be most gratified. This would reveal that the bank is aware of the very considerable progress that still must be made in loan-pricing rationalization. Once again, mere evidence of awareness may be sufficient to incline the analysts more favorably toward the bank's stock, serving perhaps to lift its multiple yet another notch.

Covering Expected Losses

Finally, if the bank can reveal a plan for better aligning risk-related charges with those exacted by the competitive public markets (as indicated by the arrows on the chart), the analyst community would be overjoyed. The bank would be serving notice that it is prepared to stop undercharging poor-quality customers and, just as important, stop overcharging its best risks.

The bank's prices might eventually be adequate enough to build a self-insurance fund against at least expected, if not unexpected, loan losses. As a result, its anticipated income stream could be more realistically discounted to its present value. And that prospect, in turn, would justify putting its stock on still more buy lists, causing the price-earnings ratio to rise by yet another and final multiple.

Large Banks Trimmed Municipal Bond Holdings by 14% in 1987

By MATTHEW KREPS
The Bond Buyer

NEW YORK — The 500 largest banks in the country slashed their municipal bond holdings by 14% in 1987, continuing the trend that began when the Tax Reform Act of 1986 was first proposed.

The banks' holdings shrank to $70.38 billion in 1987 from $81.64 billion in 1986. Combined with a 13% decline in 1986, the nation's biggest banks have let their tax-exempt portfolios dwindle nearly 25% since the end of 1985, when they loaded up on bonds in anticipation of tax reform and holdings that totaled $93.59 billion on Dec. 31, 1985.

These figures are based on entries banks make in their consolidated reports of condition under the category "securities issued by states and political subdivisions in the United States." The reports are filed with federal banking regulators every six months. The group includes credit-card and other "specialty" banks, even if they do not hold any municipal bonds.

Commercial banks were once the biggest investors in municipal bonds, but their presence in the market has declined steadily. In 1978, they held 44% of all municipal bonds outstanding, according to the Federal Reserve Board's *Flow of Funds Report*.

Even as late as 1985, after individuals had become the largest investing group, banks held 35% of the municipals outstanding. But by the end of 1987, they were down to a 25% share, according to the Fed's preliminary figures for the year.

Most Banks Reduced Portfolios

Last year, 394 of the 500 banks reduced their portfolios in terms of book value, and 28 of them cut more than $100 million. Only 72 banks increased their portfolios, none by more than $95 million. Thirty-four banks, most of them credit-card institutions, showed no municipal bond assets.

The banks would have fared even worse if they had had to sell their bonds in the secondary market. The market value of their portfolios dropped 17% last year, to $70.85 billion, because interest rates rose sharply and reduced market prices. In 1986, bond prices had risen steadily and kept the decline in the bank portfolios' market value down to 7%, nearly half the decline in book value.

The nation's top 100 banks, which own about 62% of the 500 banks' combined holdings, showed similar portfolio reductions last year. Their holdings fell 14% in book value, to $43.79 billion, and 17.5% in market value, to $44.08 billion. These holdings had declined 9% in book value and only 2.6% in market value in 1986.

Officials at many of the banks with the largest reductions in their portfolios said they had stocked up on short-term securities in earlier years, in anticipation of more restrictive tax laws, and were not able to replace them when they matured.

Congress has been whittling away at the benefits that banks get from buying municipal bonds since 1982, when the Tax Equity and Fiscal Responsibility Act trimmed the banks' tax deduction for carrying municipals for the first time, from 100% to 85%. A subsequent law lowered it to 80%. But the biggest blow came in late 1985, when the House proposed legislation that would have eliminated the deduction. While the law was not enacted until nine months later, bankers had to refrain from buying tax-exempts the entire year.

The 1986 law does allow banks to take an 80% deduction for carrying "bank-qualified" bonds: essential-purpose issues sold by governments that do not expect to sell more than $10 million of such bonds per year. The bank-qualified market has been a boon for small issuers: the demand from local and regional banks is so strong that the bonds sell at yields 10 to 40 basis points below nonqualified tax-exempts.

But the big money center banks that own the bulk of municipals said they do not find bank-qualified bonds appealing for two reasons: they cannot buy enough to rebuild their portfolios; and the bonds are expensive compared with Treasury securities in the short-term maturities they prefer, even with the 80% deduction.

In addition, many money center banks increased their loan loss reserves to protect against nonperforming loans to lesser-developed countries. That resulted in large tax losses and made higher-yielding taxable bonds a better investment than municipal bonds. Other banks, particularly those in Texas, also had less need for tax-exempt income because they continued to lose money on their domestic loan portfolios.

Most of the shrinkage in bond holdings came in the first six months of 1987. While portfolios declined 8.8% in book value and 11% in market value in the first half, they declined 5.5% in book value and 7% in market value in the second half. Bond prices plunged sharply in April and May and continued the slide through the summer.

Morgan Guaranty Trust Co. continued to be the biggest bondholder, with $4 billion in its vaults — more than twice the $1.79 billion held by the second-place bank, Citibank. The Chase Manhattan Bank fell to third with $1.74 billion, followed by Chemical Bank, with $1.6 billion; Bankers Trust Co., with $1.49 billion; the Bank of New York, $1.2 billion; and Manufacturers Hanover Trust Co., $1.1 billion. These were the only banks holding more than $1 billion of municipals at the end of 1987.

Hanover Led in Recutions

Manufacturers Hanover had the largest reduction last year, with a drop of $561 million, or 34%, to $1.1 billion. An officer of the bank, who asked not to be identified, said the decline resulted when large amounts of short-term put bonds matured and were not replaced by new debt.

Close behind was Connecticut Bank & Trust Co., Hartford, which cut its portfolio by $556 million, or 50%, to $547 million. Other large declines

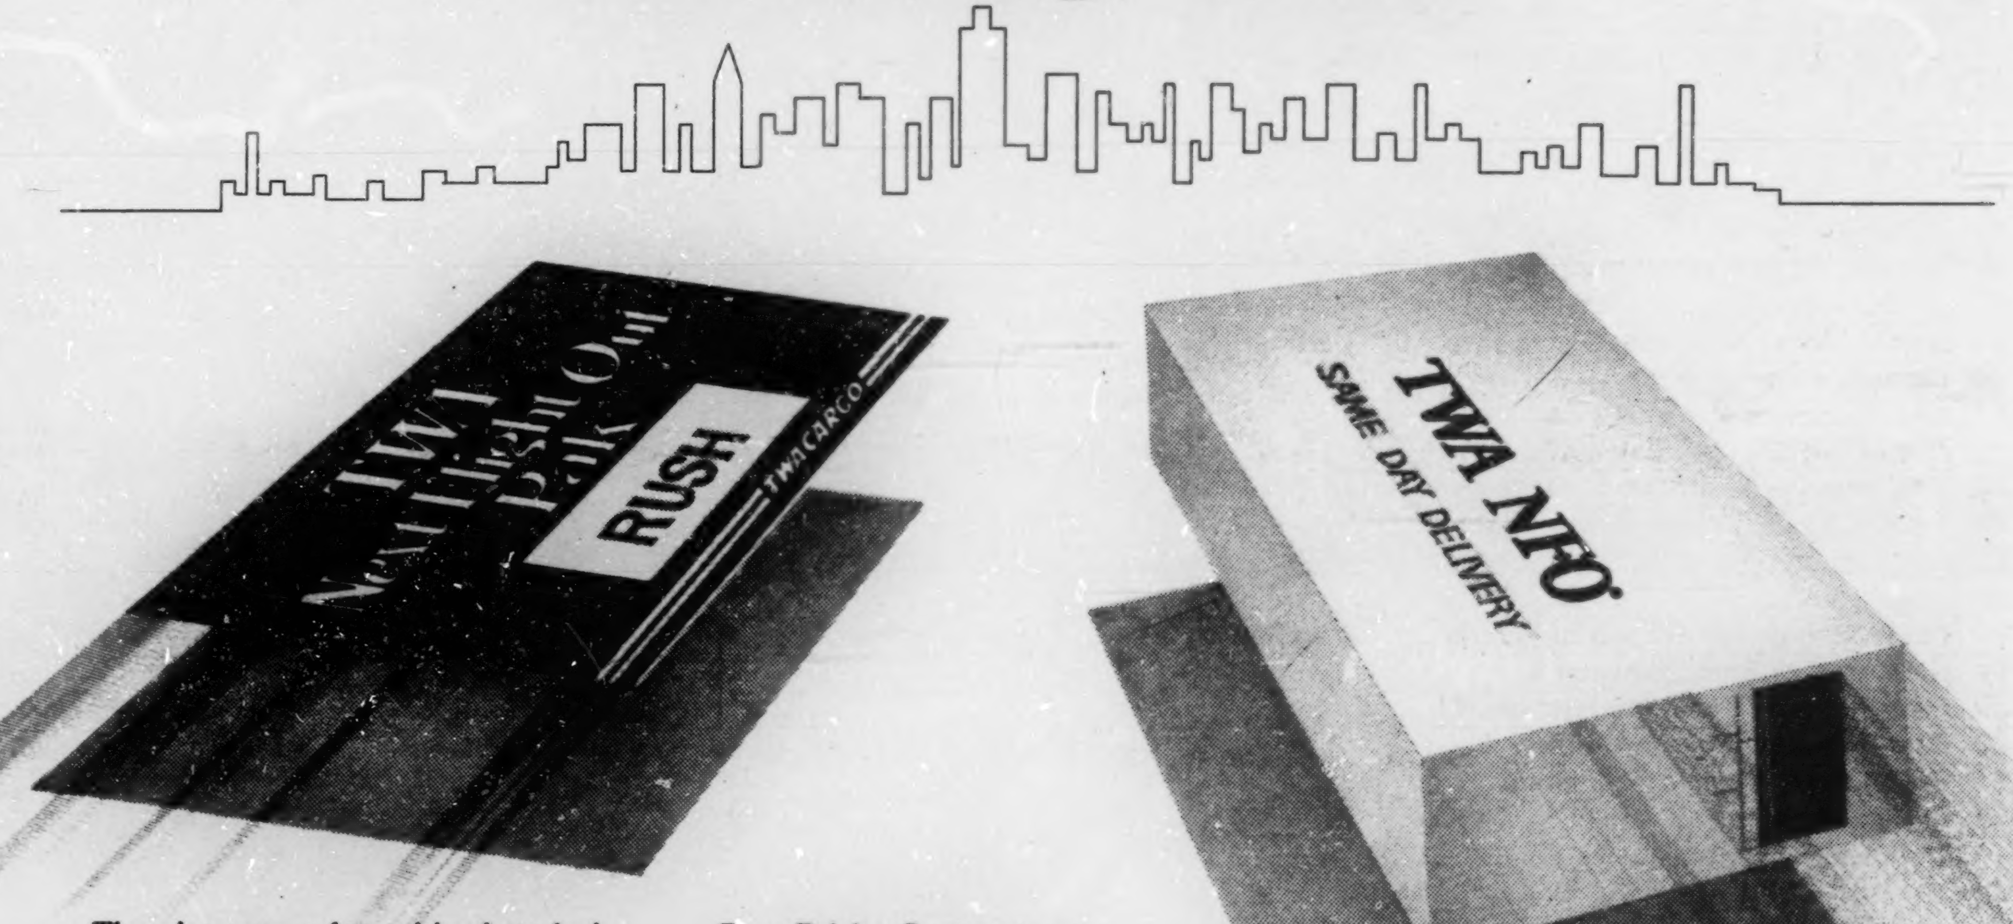
Same Day Service, 7 Days a Week...
when tomorrow isn't good enough.

Small Package Service



There's no room for waiting in today's business world. Either you get it there on time... or there might not be a next time.

That's why TWA created Next Flight Out®. It puts time on your side by putting your package on the very next TWA flight heading toward your required destination.

For Domestic Shipments...

You save time. TWA's Next Flight Out service enables you to meet those grueling deadlines with confidence. We will deliver your package to any location in any city served by TWA's domestic network that very **same day**.

You're linked to over 100 domestic cities. TWA covers North America and the world, on our own aircraft, like no service can. In the U.S., Next Flight Out can move packages weighing up to 70 pounds and measuring up to 90 inches. At the other end of the scale, you can economically handle smaller items by using TWA's Next Flight Out Pak.

You get personal attention. TWA's Next Flight Out is service as you like it. We offer low cost counter-to-counter service. Or for an additional charge, TWA will provide door-to-door pickup and delivery, if that's the way you want to go.

You get a guarantee. There's no fine print here. If for any reason (except mechanical, weather or other conditions beyond TWA's control) your domestic shipment misses the flight of your choice, we guarantee to ship your package on the next flight free.

You save money. With TWA's Next Flight Out service, fast is affordable. One reason: You can use TWA's exclusive Zone Pricing System to pre-determine your cost for every domestic flight. Zone Pricing means the price you pay is based on the distance your package travels—never a penny more. So instead of facing a fat flat rate, you fly a speedy bargain. And for TWA's exclusive PAK service for shipments under 2.2 pounds, you'll be charged one low rate of $35.00 no matter where you ship in the U.S.

For International Shipments...

You have an overnight international connection. International Next Flight Out is almost like having your own shipping department in 20 cities abroad. For one low price, you get fast, customs-cleared, **door-to-door** delivery of your small package weighing up to 50 pounds to most TWA cities in Europe. And to London you can even ship a package weighing up to 70 pounds. What's more, TWA's exclusive TRAC—a computerized monitoring system—keeps tabs on your shipment, so you know where it is every minute of the day.

You get the facts. If your package meets our weight requirements, Next Flight Out could be your ticket to flying faster. Get the facts free by completing and mailing the attached coupon today. Or CALL NOW: **1-800-638-7380.**

You receive additional FFB bonus mileage. Now whenever you ship Next Flight Out, you're in line for additional savings success. Bonus mileage will be credited to your TWA Frequent Flyer account every time you use the service. All you have to do is attach your Frequent Flyer ID sticker to the Next Flight Out airbill. We do the rest. You get 1,000 bonus miles for every package you ship out of the country and 500 extra miles for every nationwide shipment you make. Offer expires December 31, 1988

TWA CARGO

FIND OUT HOW GOOD WE REALLY ARE.

HAVE YOU COMMENTED?

The following proposals have been issued for comment by federal regulators, government agencies, and other regulatory groups whose rules affect the financial industry. The deadline date precedes each item. This feature is compiled by Howery Pack.

COMPENSATION

May 19 — The *National Credit Union Association* asks for comments on its proposal to clarify statutory limits on compensation of officials and gives authority and guidelines for indemnification of officials and employees.

Address comments to: NCUA, 1776 G St., N.W., Washington 20456.

FOREIGN OFFERINGS

May 27 — The *Federal Reserve Board* requests comments on changes to Regulation T, allowing broker-dealers to extend good faith loan value on long-term debt securities issued or guaranteed by a foreign sovereign if the securities are rated in one of the two highest rating categories by a nationally recognized statistical rating service. The proposal would also apply to provinces or states of a foreign sovereign or a supranational entity.

Send comments to: Docket No. R-0633, William W. Wiles, Secretary, Federal Reserve Board, 20th St. and Constitution Ave., N.W., Washington 20551.

ASSESSING PREMIUMS

June 6 — The *Federal Home Loan Bank Board* seeks comments on a proposal to vary insurance premiums against insured institutions based on an institution's capital level.

Address comments to: Director, Federal Home Loan Bank Board, 1700 G St., N.W., Washington 20552.

CONFLICTS OF INTEREST

June 13 — The *Federal Home Loan Bank Board* requests comments on its proposal not to apply the conflict of interest provisions to transactions between holding company subsidiary insured institutions and their affiliates, other than natural persons who have controlling shares.

Send comments to: Director, Information Services Section, Office of the Secretariat, Federal Home Loan Bank Board, 1700 G St., N.W., Washington 20552.

CALL REPORTS

June 15 — The *Federal Financial Institutions Examination Council* asks for comments on its proposal to define the "submission date" in call reports as the date the completed call report is received by the banking agencies, or their collection agents, if the report is submitted electronically. The report would not be considered late if it missed the submission deadline, as long as it had been mailed first class and postmarked no later than three days before the deadline.

Write to: Robert J. Lawrence, Executive Secretary, Federal Financial Institutions Examination Council, 1776 G St., N.W., Suite 701, Washington 20006.

NONMEMBER BANKS

June 20 — The *Federal Deposit Insurance Corp.* requests comments on a proposed statement of policy intended to provide guidance to banks on the position of the FDIC regarding independent external audits of state nonmember banks.

Address comments to: Hoyle L. Robinson, Executive Secretary, Federal Deposit Insurance Corp., 550 17th St., N.W., Washington 20429.

PRIVATE-SECTOR COLLECTION

Aug. 3 — The *Federal Reserve Board* also asks for comments on its proposed rule to require paying banks to pay for checks presented by private-sector collecting banks before 2 p.m. in same-day funds, without any presentation fees.

Send comments to: Docket No. R-0631, William W. Wiles, Secretary, Federal Reserve Board, 20th St. and Constitution Ave., N.W., Washington 20551.

If you know of a proposal worthy of comment, please send a copy to: Howery Pack, Editorial, American Banker, One State Street Plaza, New York, N.Y. 10004.

Municipal Holdings Fell 14% at Big Banks in '87

➼ **Continued from Page 7**

were reported by First RepublicBank, Dallas, which cut $454 million, or 74%, of its portfolio; Pittsburgh National Bank, which cut $423 million, or 57%; and Michigan National Bank, Farmington Hills, which cut $401 million, or 69%.

Boston Safe Deposit & Trust Co. had the biggest portfolio increase in 1987, with a gain of $95 million, or 11%, to $971 million. The bank is the principal subsidiary of the Boston Co., which is owned by Shearson Lehman Hutton Inc. Bank officials would not comment on their portfolio.

Following Boston Safe Deposit was Bankers Trust Co., up $93 million, or 7%; Idaho First National Bank, Boise, up $75 million, or 5,959%; Exchange National Bank of Chicago, up $54 million, or 964%; and First Interstate Bank of Arizona, Phoenix, up $46 million, or 11%.

New York banks continued to hold the vast majority of municipal bonds, with 44 owning $17.26 billion, or 24.5% of the 500 largest banks' combined holdings. They were followed by Florida, $4.92 billion among 27 banks; Pennsylvania, $4.11 billion among 39 banks; New Jersey, $3.75 billion among 29 banks; and Ohio, $3.33 billion among 27 banks.

The New York banks also had the largest average portfolio, with $392 million. Next came Oregon, with $273 million; Connecticut, $254 million; Georgia, $249 million; and North Carolina, with $243 million.

The New York banks also sold off the most bonds in 1987, with a total reduction of $2.1 billion, or 11%. ■

Bank Quandary: How to Sell Mutual Funds

By LYNN BRENNER

NEW YORK — Bankers are still pounding on the portals of the securities underwriting and insurance industries. But in the past five years, they've quietly slipped into the mutual fund business by a side door.

"I don't understand why so many bankers' associations keep talking about getting rid of Glass-Steagall so they can sell mutual funds," one longtime industry observer said recently. "They can do that already."

For at least 95% of the banks interested in selling mutual funds, in fact, the future of the Glass-Steagall Act is of only academic interest. They have all the mutual fund powers they need. Their real problem is figuring out how best to use those powers.

Survey Results
Tables on Pages 18 and 20

Responses to an American Banker/-Lipper Analytical Services Inc. survey of the nation's top 100 commercial banks suggest that few banks have yet solved that problem.

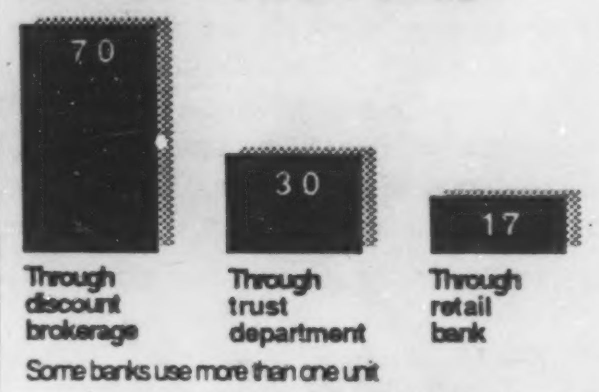
An overwhelming majority of respondents (95%) confirm that they make mutual funds available to their customers or provide services to mutual funds, or both. But typically, these activities are scattered through several bank departments or subsidiaries — trust, bond, retail, discount brokerage. Often no one person at the institution is familiar with the extent of its mutual fund business.

The survey, a three-page questionnaire, was mailed to the chief executives at each bank, with a request to forward it to the appropriate person. A follow-up request was sent five weeks later.

Some questionnaires were filled out

Banks: Page 22 ➸

How Top 100 Banks Provide Mutual Funds



Some banks use more than one unit

Source: American Banker-Lipper Analytical Services Inc.

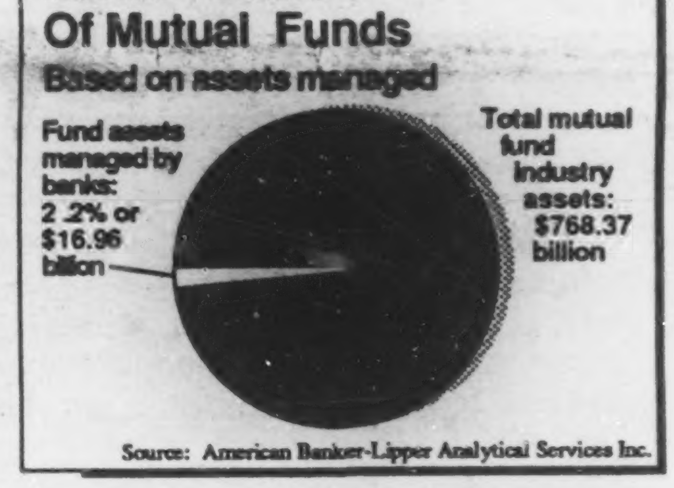
Marriage of Convenience Tempts Fund Providers

By LYNN BRENNER

NEW YORK — The mutual fund industry is seriously considering banks as potential partners, since their entry into the business is seen as inevitable. But mutual fund executives contemplate the prospective alliance with mixed feelings — not unlike those of an exceptionally vain prince pondering the pros and cons of marriage to a dumpy, boring bourgeoise with a potentially stunning dowry.

Like most people in the securities business, many mutual fund executives find banks plodding, bureaucratic, and utterly devoid of marketing ability. On the other hand, 9 out of 10 Americans have a relationship with a bank and most of them don't yet own mutual funds. That's a lot of potential customers.

Banks' Share Of Mutual Funds
Based on assets managed



Source: American Banker-Lipper Analytical Services Inc.

But can the banks really deliver their customer base? Is the dowry real or merely illusory?

Even allowing for the legal restrictions that currently hamper many banks' marketing efforts, most fund executives interviewed said that with a few exceptions, bank mutual fund sales have been disappointing so far.

The exceptions are banks willing to market aggressively and to compensate their branch personnel for referring customers to licensed salespeople. "I don't think the marketing area — discount brokerage, retail, dealer department — matters so much as the attitude of the bank," said Joseph T. Grause Jr., vice president of Fidelity Investments Institutional Services.

Other fund executives agree. And although their experience so far has fallen short of expectations, fund companies clearly have not abandoned the idea of building a bank distribution

Appraisals for Sale Undermine Real Estate Values

The following article by James Grant is reprinted from the April 1 edition of Grant's Interest Rate Observer.

□

SUPPOSE that, with the government's blessing, you could borrow to the hilt against the value of an asset. Suppose that the privileged asset were common stock. People would say, "You're a fool not to own stock, and you're a fool not to buy it on margin. You can't afford not to borrow because the interest is deductible."

Imagine, in the same world, that the newspapers published no stock tables. If you wanted to know what your portfolio was worth, you could walk to the courthouse and look it up. Values would be set, mainly, by appraisal. Appraisers — a suggestible crowd — would produce the answers that the brokers and lenders asked for.

Something like this system, of course, is already a way of life in real estate, a vast and debt-laden market. According to the Federal Reserve Board, mortgage debt is something in the neighborhood of $2,883 billion. That dwarfs $1,202 million in corporate and foreign bonds, $721 billion in tax-exempt obligations or $753 billion in consumer credit. It runs neck and neck with the public debt, at $2,931 billion.

Mortgage debt is supported by "value," and the value is established, in part, by appraisal. Lately, the appraisal system has come in for congressional criticism, although the contretemps has been conducted as far from the front of *The Wall Street Journal* as a school board meeting.

Rep. Doug Barnard Jr., D-Ga., began to pry into real estate abuses in 1985. Last year a legislative remedy was proposed by Mr. Barnard, chairman of the subcommittee on commerce, consumer, and monetary affairs of the House Committee on Government Operations. It is H.R. 3675, a bill to impose national appraisal standards, introduce a form of appraiser licensing (the states would do that), and create a new appraisal regulatory body to shepherd the states through the licensing process.

Wall Street May Wake Up to Appraisals

Real estate appraisal is not an everyday topic of Wall Street conversation, but that may change if current unnerving trends continue. We read in a recent *Pensions & Investment Age,* for instance, that nonperforming mortgages held by insurance companies almost tripled in the past two years, to 3.23% of the insurers' total mortgage portfolios at yearend 1987 from 1.16% at yearend 1985. (Travelers Corp., with heavy exposure to Texas and the Southwest, has been especially hard hit.)

Meanwhile, residential mortgage delinquencies have become worrisomely detached from the ordinary rhythm of the business cycle. What is different about the recent rise in past-due payments is the expansive economic climate in which it has occurred.

Most of the nation, at least, is growing. As with so many departments of the credit markets these days, one wonders what the next recession will produce. It is hard to imagine delinquencies declining and easy to conceive of them jumping off the chart.

For another thing, mortgages are not merely made and kept nowadays; they are made and sold, or "securitized," so that crookedness, or malfeasance, in one market sector or region can quickly become a problem in other sectors and regions.

"Banks are moving more toward riskier real estate lending and away from more conservative commercial lending, which actually shrank by 2% last year," L. William Seidman, chairman of the Federal Deposit Insurance Corp., said recently.

In an inflationary time, the flood tide of money forgives everyone and everything. The ebb tide, though, is merciless; the beach it exposes is strewn with appraisals and, of course, enthusiasts.

Anyway, H.R. 3675 was the subject of some extensive testimony in February and March, and we ordered about a foot of the documents from Washington. It was riveting stuff.

More to Real Estate than Donald Trump

It did not suggest an immediate course of investment action, except to confirm a bear in the conviction that there is more to the real estate markets than Donald Trump. However, it did raise some questions and furnish some facts.

The expert witnesses, naturally, were divided on almost everything. They couldn't see eye too eye on the number of practicing real estate appraisers (estimates range from 150,000 to 250,000) or on the financial damage that faulty appraisal work has done or is likely to do in either the residential or commercial fields. (It was thought to be substantial.) They couldn't agree on the need for yet another new federal agency to tackle yet another financial problem.

In September 1986, Rep. Barnard's subcommittee produced a study concluding that slipshod appraisals "have seriously damaged and contributed directly to the insolvency of hundreds of the nation's financial institutions and have helped cause billions of dollars in losses to the federal deposit insurance funds, to federal programs that guarantee mortgage loans, and to private-sector mortgage insurance companies, lenders and investors in mortgage-backed securities.

It is hard to know just how to assign the blame among appraisers, lenders, developers, central bankers, and the forces of nature. Put another way, there is nothing wrong with any appraisal that a lot of inflation wouldn't fix. A man from the Federal National Mortgage Association testified that the quantity of appraisal work hadn't caused the devastating losses in Houston; house prices just crashed.

Accepting the congressman's premise that appraisers tend to err on the high side, however, we were left to draw the conclusion that financial leverage in real estate is probably higher than it seems. If appraised values are often higher than true ones, investor equity is lower than true equity.

Thrifts Fail when Appraisers Err

Therefore, the loss-absorbing cushion on the run of real estate deals is thinner than you'd think. (The Congressman again: "During hearings in Los Angeles this past summer into the insolvencies of 33 federally insured S&Ls in that state over the past three years, the subcommittee learned that appraiser misconduct was directly involved in thousands of defaulted real estate loans and investments that will cost the FSLIC. $3.5 billion.")

One striking piece of testimony was that of D. Michael Riley, director of examination and insurance of the National Credit Union Administration. The administration regulates some 14,300 credit unions with total assets of $162 billion — not a lot of money as banking assets go (Citicorp has over $200 billion).

What was notable about Mr. Riley's comment was what they revealed about consensus thinking at the nation's credit unions. Residential mortgage lending has grown by leaps and bounds, he testified.

Real estate loans at federally insured credit unions grew by 117% during 1985, 220% during 1986, and 46% during 1987. Real estate loans increased at federally insured credit unions from 8.5% of total loans outstanding in 1984 to 27% at yearend 1987.

As of Dec. 31, 1987, federally insured credit union held nearly $27 billion in real estate secured loans. In addition, the growing popularity of home equity lending programs promises even further increases in the volume of real estate loans held by credit unions. The growth in real estate lending at federally insured credit unions places increased importance on sound real estate appraisals.

However, Mr. Riley went on to say, the credit unions are not satisfied appraisal customers. He cited a lack of "consistent, uniform standards" among appraiser and recounted a couple of horror stories.

Case History of Bamboozlement

In one, a credit union was bamboozled by an appraiser who overvalued some properties by a neat 40%. The credit union failed. And, said, Mr. Ril-

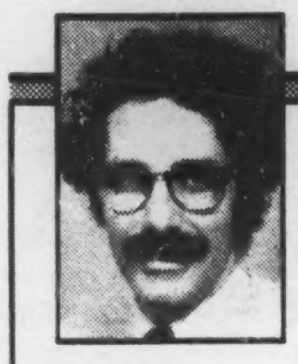
ECONOMIC PERSPECTIVE

The Trade Bill Should Be Passed Despite Its Flaws

By ROBERT J. SAMUELSON

TUCKED away in the massive trade bill that President Reagan will soon veto is a tiny provision that allows the government to pay hundreds of thousands of dollars in legal costs for the National Corn Growers Association. What's that got to do with trade? Not much. The Corn Growers spent the money unsuccessfully defending U.S. corn exports against protectionism in Canada. Government reimbursement would be subsidizing lawyers, not exports.

You're supposed to believe that the trade bill is about reducing the huge U.S. trade deficit. It isn't. Even if the bill ultimately becomes law — and that's possible — there wouldn't be any dramatic effect on the U.S. trade balance. What happens to the trade balance depends mostly on forces outside the control of either the President or Congress: exchange rates, the pace of world economic growth, and the competitiveness of U.S. companies.



Samuelson Says:

The bill's virtues outweigh its vices. But no one should think it will trigger a transformation of U.S. trade.

It is a fond Congressional myth that most problems can be solved by legislation. Almost no one believes this, but legislators perpetuate the myth so that the public will think Congress is "doing something" about pressing problems. In an election year, the mythology and accompanying partisanship are magnified. Thus, the Democratic congressional leadership portrays the trade bill as a decisive rejection of a passive Reagan trade policy in favor of its own activist approach.

This is public relations. If the veto is upheld, Congress ought to pass a bill without the requirement for advanced notice of layoffs that the President opposes. The bill's virtues outweigh its vices. But no one should think it will trigger a transformation of U.S. trade. Many provisions (like the giveaway to the Corn Growers) barely deal with trade. For instance, the bill would repeal the windfall profits tax on oil. Even the layoff notice requirement isn't strictly related to trade, because most layoffs aren't caused by imports.

As for changes in the trade laws, they are so technical that almost no one is certain what the effects will be. The avowed purpose is to open overseas markets by having the President investigate "unfair" foreign trade practices and then retaliate if other countries don't reduce their restrictions. But even if all unfair foreign practices were instantly eliminated, the trade deficit would shrink by only 10% to 20%. And, of course, this sort of sweeping success is wildly improbable.

Perspective: Page 28 ➸

Mr. Samuelson also writes a biweekly column for *Newsweek* magazine. His column for the *American Banker* appears every other Wednesday.

Sources of Data: American Banker-Lipper Analytical Services, Inc. questionnaire sent to each of the top 100 banks during the period February-April 1988. For those banks not responding to the survey other American Banker and Lipper data were used. **Survey Response:** To determine whether or not a bank provides mutual fund services, the first survey question asks, "Do the bank's customers purchase or redeem shares of mutual funds through any of the bank's divisions or subsidiaries?" A "Yes" response indicates the bank offers mutual funds. A "No" response indicates the bank does not. "NR" indicates that the bank did not respond to the survey; therefore other data were used to supplement and complete the table above. (¹)— Although the bank responded "no" to the survey, other data show that it provides mutual fund services to its customers either directly or though its parent, The Boston Co. **Mutual Fund Services Provided by the Bank:** The five types of services are: **Investment Advisor**, where the bank is employed by a mutual fund to give professional advice on the fund's investments and to supervise the management of its assets; **Custodian**, where the bank maintains a mutual fund's assets, including portfolio securities or some record of them. Provides safekeeping of securities but has no role in portfolio management; **Transfer Agent**, where the bank is employed by mutual funds to prepare and maintain records relating to shareholder accounts. Some mutual fund groups operate in-house transfer agencies; **Shareholder Servicing Agent**, where the bank is responsible for answering customer inquiries and generally assist in other matters pertaining to the fund and its customers; and **Agent**, where the bank intoduces its customer to a mutual fund.

Mutual Funds Contemplate Marriage of Convenience with Banks

Continued from Page 1

network. In 1982, only three companies — Dreyfus Corp., Fidelity Investments, and Federated Research Corp. — sold products through banks. Many firms have jumped into the bank market since then.

Bankers say one of the most assiduous in courting them is Kemper Financial Services, which didn't start offering products through banks until 1986. The firm now has selling agreements with 270 of the nation's top 300 commercial banks.

Kemper is also one of the most successful companies at selling products through banks. "Last year, we sold nearly $1 billion of mutual funds through commercial banks. That was a shade under 15% of our mutual fund volume for the year," said Mark Olson, first vice president and national sales director of insurance and banking at Kemper. The company expects banks to account for almost 20% of mutual fund volume in 1988.

"Everyone at the bank — the teller, the parking garage attendant, the new accounts officer — all of them should be involved in marketing," said Mr. Olson. "All these people should funnel customers to the investment department."

Intensive Training Program

Kemper has an intensive training program designed to teach mutual fund marketing to everyone in the bank. "There's been more demand for training than we can keep up with. We may double or even triple the training staff," he said.

Intensive training of bank personnel may be the key, said Michael Lipper, president of Lipper Analytical Services Inc., Summit, N.J. "Banks are a distribution point, but they're not [a] distribution [network] yet," he said. "Can they be trained? Yes, but it's terribly expensive, and so is the back-office support. You need a Kemper-sized organization to afford it."

Five years ago, a bank typically offered the funds of only two or three providers. Today, it's more common for an institution to make available products from 10 to 20 providers.

The big providers have been quick to adjust to this trend. For example, Kemper's bank business is not limited to the funds it sells through Kemper Financial Services. The company also owns approximately 41% of ISFA Corp.'s Invest, a Florida-based broker-dealer that markets securities and insurance products through nearly 300 thrifts and credit unions nationwide. Invest is not limited to selling Kemper products.

Fidelity Investments has also positioned itself to get a piece of the action whenever a bank sells a mutual fund — whether or not the fund is Fidelity's. Early this year, the firm created Fundsmart, an automated accounting system that effectively gives a bank its own mutual fund clearing house.

Fundsmart will allow banks to produce consolidated statements, reinvest dividends, and buy fractional shares for their customers. Fidelity's subsidiary National Financial Institutional Services, which began marketing Fundsmart last month, claims the system will give banks a competitive advantage over many broker-dealers in selling "virtually every mutual fund on the market."

The Boston-based firm thinks that most financial institutions ultimately will offer funds from many providers rather than create their own or limit themselves to selling agreements with two or three fund companies, said Mr. Grause.

But many bankers don't see themselves as mere marketers of product. They want to create, manage, and sell their own mutual funds. At least a dozen banks have already come as close as they legally can to doing that, by acting as investment advisers to their own proprietary, or private label, funds.

So far, banks have not had notable success at persuading customers to invest in the mutual funds they manage. At the end of 1987, the funds ranged in size from $2 million to $1.3 billion. By far the largest in asset size were money market and government funds, suggesting that the bulk of money in them comes from the banks' deposits.

"The assets banks already have, captive assets, can be used to start a fund," said Howard Stein, chairman of Dreyfus Corp. "But they can't bring in enough new business to be profitable. They can't leverage that base into a business."

Dreyfus has a lot of experience working with banks. The New York-based firm has marketed through banks since

TempFund outperforms the competition...again!

Donoghue's *Money Fund Report** has again ranked TempFund, Shearson Lehman Hutton's institutions-only money market fund, as the #1 performer in its category for the five years ended 12/31/87.**

What makes this achievement all the more impressive is the fact that TempFund has outperformed its competitors without lowering its high quality standards. As a result, TempFund has earned a reputation as the quality choice for meeting the short-term investment needs of bank trust departments that seek safety of capital and liquidity, as well as competitive returns.

That's why it should come as no surprise that institutions across America have over $8 billion invested in TempFund.

TempFund and the Shearson/Provident Advantage

Provident Institutional Management Corporation (PIMC), the investment adviser to TempFund, has a long history of high quality money market fund management. PIMC has also been successful in achieving competitive performance throughout the course of complete interest rate cycles.

As the Fund's distributor, Shearson provides customized institutional services through its nationwide network of Institutional Funds Shareholder Representatives. And through our Institutional Funds Computer Access Program, investors in TempFund – or any one of our institutions-only funds – have direct microcomputer access to current Fund information.

Call the IFG Service Center Today

For a Prospectus and complete information on TempFund and the Shearson/Provident Advantage, contact your Institutional Funds Group Shareholder Representative. Or call the Institutional Funds Group (IFG) Service Center at 1-800-221-8120. Please read the Prospectus carefully before you invest.

*Published by The Donoghue Organization, Inc. of Holliston, MA 01746, a nationally recognized money market fund reporting service.

**TempFund was ranked #1 among 34 taxable institutions-only money funds on the basis of the growth of a $10,000 investment for the five year period ended 12/31/87. Performance figures were obtained from the 19th edition of Donoghue's *Mutual Funds Almanac*. Current annualized yield for the seven days ended 4/27/88 was 6.62%. The Fund's yield will fluctuate as market conditions change.

Source: American Banker — Lipper Analytical Services, Inc. Survey of the Mutual Fund Activities of the Top 100 Commercial Banks. Of the top 100, 40 banks (40%) responded. Of the 40 responding, 38 (95%) provide mutual funds to customers. Of the 38, the 29 banks above (76% of the respondents) provide mutual funds through the trust department. **(1)**— Did not indicate role. **(2)**— Indicated role was "other" than the four roles described below. **N.A.**— Not available.

Agent: The bank acts as an intermediary for the purpose of making funds available to its customers.

Investment Advisor: The bank employed by a mutual fund to give professional advice on the fund's investments and to supervise the management of its assets.

Transfer Agent: The bank employed by mutual funds to prepare and maintain records relating to shareholder accounts. Some mutual fund groups operate in-house transfer agencies.

Shareholder Servicing Agent: The bank is responsible for answering customer inquiries and generally assists in other matters pertaining to the fund and its customers.

Custodian: The bank maintains a mutual fund's assets, including portfolio securities or some record of them. Provides safekeeping of securities but has no role in portfolio management.

Based on Survey of the Top 100 Banks by American Banker — Lipper Analytical Services, Inc. Forty of the top 100 banks in the nation responded to the survey.

How the Survey Was Conducted

The **American Banker**, working in conjunction with Lipper Analytical Services Inc., developed a three-page questionnaire that was mailed to the chief executives of the top 100 banks in late February.

A followup questionnaire was sent five weeks later to banks that did not respond. Also, for the top 25 banks, a third request was sent to public relations officers about one week after the mailing of the second request. Forty banks responded to these requests for data. Five other banks informed the **American Banker** that data for their banks would not be available. The survey results were supplemented with additional data provided by Lipper Analytical to develop the table entitled "Mutual Fund Activities of the Top 100 Banks."

The tabulation of the questionnaires was done jointly by American Banker and Lipper Analytical staff. L. Michael Cacace, American Banker's chief statistician, coordinated the survey.

An American Banker Special Report

Mutual Funds Contemplate Marriage of Convenience with Banks

Continued from Page 19

1982 and now has contracts with 400. It was also the first mutual fund company to help a bank create a private-label fund, agreeing to distribute the Pacific Horizon funds managed by Security Pacific in early 1984. The arrangement was discontinued last year by mutual consent.

Dreyfus also distributed the Park Avenue funds managed by Chase Manhattan, from late 1984 to mid-1987. The firm's only current private-label fund arrangement is as distributor of First National Bank of Chicago's First Lakeshore Funds.

So far, banks have not had notable success in persuading customers to invest in mutual funds.

Mr. Stein said he would not consider doing any more private-label funds.

Bankers and mutual fund executives are wrong in assuming that a bank's customer list will prove a gold mine of mutual fund prospects, he said. "The bank customer list is relatively unimportant in the mutual fund industry, because the larger part of the list are people who borrow money and cash checks," he said. "To the degree that bank customers invest, they're already doing it in the outside world and have a certain view of banks' ability to manage money."

Whether or not banks' poor image as money managers is justified, Mr. Stein said, it will take "a deep marketing effort, manned by selling people" to change that image. The high cost of such an effort seriously reduces the chances that a bank's mutual fund can be profitable.

"Look at the money raised and spent by Citibank, Chase Manhattan, Security Pacific. Subtract the captive assets used to start the business, the money *that was already there*, and look at what they raised," he said. "We track it week by week, and it's de minimus."

Name Brands Outsell Private Labels

Bank-managed funds are competing in a crowded market. "Our experience is that where there's a mix of funds available at a bank, both outside funds and in-house funds, the name-brand fund outdraws the proprietary fund," said Mr. Grause of Fidelity. His company currently administers 10 private-label funds and has several more in the works. "Bank customer loyalty has not translated as fast or as well as expected into nonbank, non-FDIC products."

That is true even when the product marketing is done by an experienced mutual fund company.

For example, Dreyfus advertised Chase Manhattan's Park Avenue New York Tax-Exempt Money Market Fund every week for nearly three years, according to Mr. Stein. "The fund never got more than about $300 million," he said. Then, in June 1987, after the arrangement with Chase ended, Dreyfus introduced a New York tax-exempt fund of its own. "In three or four months, our fund had passed the money it took us years to get in the Park Avenue fund," he said.

At the end of April, the nine-month-old Dreyfus fund had $364.3 million under management. The three-and-a-half-year-old Chase Park Avenue fund had $275.5 million under management — more than half of it trust department assets, according to a source familiar with the fund.

Despite this negative experience, banks continue to hunger for private-label funds, and mutual fund companies are increasingly willing to help set them up.

"Mutual fund companies want bank trust departments to invest in their funds. They want the bank's discount brokerage and dealer departments to sell their funds. They're not crazy about creating a private-label fund," said Brian Smith, former general counsel for the Office of the Comptroller of the Currency and now a partner at Stroock, Stroock & Lavan. "But if that's what it takes to get the trust and brokerage business, they will." ■

FIserv Acquires Service Bureaus

NEW YORK — FIserv Inc., a rapidly growing data processing company based in Milwaukee, has announced the latest in a string of acquisitions of bank service bureaus.

FIserv said it is taking over ZFC Electronic Data Services Inc., Bowling Green, Ky., which provides computer support to 25 banks in Kentucky, Indiana, and Tennessee. The relatively small banks have combined assets of $1 billion.

The closing is set to take place today. FIserv did not disclose the terms of the transaction. FIserv plans to change ZFC's name to FIserv Bowling Green and install Thomas Blair as its president. Mr. Blair was president of ZFC.

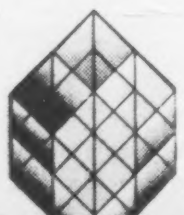
Just last week, FIserv completed a merger with Citizens Financial Corp., Cleveland. The latter's principal subsidiary, Champion Service Corp., became FIserv Cleveland, the 14th of FIserv's data centers. The data centers together serve more than 600 financial institutions in 27 states.

The Cleveland acquisition came three months after FIserv's purchase of Minnesota On-Line Inc., a Minneapolis service bureau for credit unions.

"FIserv continues to seek out and acquire strong regional data processors who have a positive reputation for service and product development," said George Dalton, chairman of FIserv. "ZFC fits this criterion as well as having an outstanding management and staff."

FIserv also owns First Trust Corp., a Denver-based administrator of trust and retirement programs; Sendero Corp., a Phoenix-based education and software firm specializing in asset and liability management; and FIserv Forms and Graphics, a business forms supplier with offices in Seattle and Milwaukee. ■

Trying to put all the pieces together for mutual fund services?



We're the missing link.

To the CEO of a bank or savings and loan institution, the attraction of mutual funds is readily apparent. So are the challenges. We can help. We're the professionals of DH&S Investment Company Services — part of the DH&S Financial Industry Group.

Our familiarity with both depository institutions and mutual funds enables us to offer you a variety of valuable services. We can, for example, help install shareholder recordkeeping systems and support functions. We can help develop computer programs that read tapes produced by transfer agents of unit investment trusts — to prepare audit trails, financial statements, and EDGAR filings. We also help new mutual funds set up general ledgers and meet regulatory requirements. Or we can perform internal-control reviews of third-party custodians and transfer agents.

We at DH&S frequently prepare booklets and other reference materials to help our clients deal with complex financial issues, laws, and regulations. *Creating a Mutual Fund* is our most recent publication. We invite you to mail in the attached coupon for your personal copy. And, if you would like more detailed information about our services, call or write Richard P. Meyerowich, National Director, Investment Company Services, Deloitte Haskins & Sells, One World Trade Center, New York, NY 10048-0601, (212) 669-5250; or call us toll free at 1 (800) 824-2265.

Banks Uncertain How to Use Mutual Fund Powers

➞ Continued from Page 1

by more than one person. In other cases, questionnaires were copied and circulated among bank departments and affiliates, with one individual at each institution designated to complete a final version based on several drafts.

In all, 40 of the top 100 banks responded, 5 declined to participate, and 55 did not respond. The absence of a central source of information may be the reason the remaining 55 banks did not respond. As a glance at the table on page 18 shows, the banks that did not respond are as involved in the mutual fund business as are the respondents.

The survey shows the extent to which many of these banks are groups of fiefdoms rather than unified entities. In this sense it faithfully pinpoints the source of one of their greatest difficulties in offering mutual funds, according to industry sources.

"Turf is a political dilemma in the bank," said Mark Olson, first vice president and national sales director of insurance and banking at Kemper Financial Services, which has selling agreements with 270 banks. "They don't see all customers as customers of the bank. The first thing our mutual fund training program has to do is knock down the walls inside the bank."

The fact that banks' mutual fund activities are so fragmented suggests that senior management is not seriously committed to the business. This, too, is confirmed by mutual fund executives.

"I think a minority, maybe 15 or 20 of the top 100 banks, see mutual funds as an opportunity and are aggressively pursuing them," said Joseph T. Grause Jr., vice president of Fidelity Investments Institutional Services Co. "Then there's a larger group of banks that are experimenting — some of them aggressively, some more cautiously. And a third group are acting purely defensively."

A serious commitment to marketing mutual funds means risking self-disintermediation. The chance that a successful mutual fund operation will cannibalize the bank's deposits is a lingering fear for a money center bank that relies on deposits as a source of cheap funding, pointed out Robert Hutchinson, senior vice president of Manufacturer's Hanover Trust Co.

Big banks are probably more eager to create their own mutual funds than to sell those of others. Eighteen of 38 survey respondents say they are already investment advisors to funds and five say they soon will be.

Other surveys have shown the same interest. In an Alliance Capital Management survey last year, 40 of 148 big commercial banks said they would seriously consider developing their own mutual funds should Glass-Steagall be modified to allow that.

> The fact that banks' mutual fund activities are so fragmented suggests that senior management is not seriously committed to the business.

But both banking and mutual fund industry sources say the decision to manage a fund should not be made lightly. The ambition is unrealistic if the bank can't hope to achieve at least $100 million in assets, according to most mutual fund experts. A few put the figure lower, from $25 million to $50 million.

"Will the fund be big enough to defray the costs the bank will incur by being investment adviser? They include outside auditors and lawyers, registration fees, portfolio managers," said Sheila Penrose, senior vice president of Northern Trust Co. and chairman of its subsidiary, Northern Trust Brokerage Inc. "These are all charges against the fund and affect its performance."

Many bankers think a fund investment adviser earns its fee — typically based on a percentage of fund assets — regardless of fund size, said Mr. Grause.

"But there are a lot of fixed costs on a mutual fund — transfer agency, record keeping, insurance, as well as auditors and outside legal counsel. State blue-sky restrictions limit the expense ratios on a fund. The adviser's 40 to 50 basis points are going to be reduced by every excess dollar of expenses," he said.

To be successful, bank-managed funds must fit the bank's image, added Ms. Penrose. Northern Trust offers three conservative funds — money market, government securities, and tax-exempt — that are identified with the bank's fiduciary role. Total assets under management were $1.9 billion at the end of 1987.

Bank-managed equity funds have not sold well, even when their performance was excellent, noted Michael Lipper, president of Lipper Analytical Services, Summit, N.J.

There's little doubt that fund providers would rather pay banks to sell their funds than help them create their own. Fidelity, for instance, has helped 10 banks create proprietary funds. But it has agreements with 70 institutions to offer Fidelity funds, and provides brokerage services to 275 more.

Survey responses show that a handful of well-known fund company names — Dreyfus, Fidelity, Federated, Kemper — predominate among the products banks make available to their customers.

The better known a fund, the easier it is to sell — but the best-known funds offer banks the smallest compensation. For example, a bank will earn a 2% fee for selling Fidelity's Magellan Fund, but could earn 4.25% by marketing one of Fidelity's less known Plymouth funds.

Bankers' product preference is for household-name funds. But their methods of marketing them vary widely:

- The trust department typically has the most investable funds. But its marketing abilities are usually undeveloped. "Most bank customers have no idea what the trust department does," noted John J. DeMarco, senior vice president of PSI, a Tampa, Fla.-based consulting firm.

- The bond department, sometimes called the investment or dealer department, is usually the bank's most aggressive marketer. "Bond salesmen know how to sell — they're the best sellers of product, but they have a narrow, limited view," said Matthew Sola, researcher and author of a 1986 report on bank mutual fund activity for the Washington-based Council on Financial Competition. "They just call their usual customers."

- The discount brokerage affiliate, like the bond department, has trained and licensed salespeople, and tends to be most banks' first choice for marketing funds.

But discount brokerage does not offer hand-holding, pointed out Manufacturers Hanover's Mr. Hutchinson — it offers execution of trades for people who already know what they want.

- Direct mail typically produces only a small response rate, and can be used only for no-load funds, which don't generate much in fees for the bank. "The money in no-load funds is in asset management," said Mr. Hutchinson.

None of these methods is particularly successful at tapping the enormous retail customer base that most banks and mutual fund companies see as the really big potential market. Discount brokerage customers, in fact, are often not branch customers.

For state-chartered banks like Manufacturers Hanover, which are allowed to make funds available but not actively market them, one option is hiring a third party to do the selling.

"That was not for us," said J. Terrence Murray, senior vice president of Northern Trust Bank. "We wanted control of the sales process. Besides, our clients do a lot of things with us besides buying mutual funds, and we want to protect the relationship."

Manufacturers Hanover sees it differently. The bank agreed late last year to have third-party marketer Pamco Securities & Insurance Services sell mutual funds at 10 New York City branches.

"We have concluded just making mutual funds available is not enough to get a lot of business," said Mr. Hutchinson.

The problem with selling through a third party is that the bank gives up a degree of control and some revenue, said Matthew Sola, a researcher for the Council on Financial Competition.

"But I've talked with some big banks that expressed regret they didn't do it with a networking partner," he added. "It may be worth what a bank gives up, to get the training, the recommendations, the materials." ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our special report on mutual funds meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

Mutual Funds Research:
Positioning in a Volatile Market

Response Analysis Corporation, a Princeton, New Jersey, marketing research firm, just completed a multisponsor research project on the *post-crash* mutual fund market. This study is designed to help new as well as established mutual fund distributors.

STUDY OBJECTIVES:

- To determine mandatory product features, from a consumer and third-party distributor perspective, in a volatile market
- To profile mutual fund customers and prospects and to determine how they differ
- To define how various mutual fund products are differentiated by consumers and third-party distributors and how they are differentiated from competing investment products
- To define the best communications and distribution methods
- To assess consumer receptivity to mutual funds offered by different types of distributors

Research activities include face-to-face interviews with mutual fund owners and prospects, telephone interviews with third-party distributors and with marketing officers of large banks and thrifts, and an analysis of print ads before and after the October 1987 Crash.

For information on how you can purchase this research, call Debbie Stern, Senior Research Director, at (609) 921-3333.

Response Analysis is also launching a multisponsor study on the market for **non-qualified annuities**. For more information on sponsorship or to discuss any *custom* research needs, call Roy Baldassari or Debbie Stern.

CORPORATE FINANCE

Unrated commercial paper, a cross between commercial paper and junk bonds, is the latest threat to the lending business of banks. It provides funds cheaper than banks can provide them and allows firms to go directly to the capital markets. ____ 30

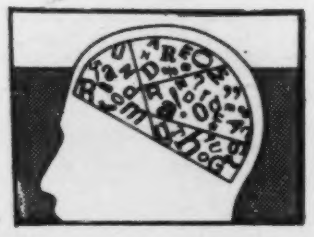
Vons Supermarkets found that its highly leveraged status was no barrier to the unrated commercial paper market. ____ 30

Worth Repeating

The whole goodwill issue is at the holding company level, and that's why all the banks say, 'Why should we have two tiers of capital requirement?'

FDIC Chairman L. William Seidman, who opposes extending risk-based capital requirements to bank holding companies. [Page 2]

Random Thoughts



By SANFORD ROSE

In the conclusion to his very excellent volume, "Breaking the Bank: The Decline of BankAmerica," Gary Hector takes issue with those who argue that there were no black hats at the California institution. Writes Hector: "There were black hats . . . men who sat idle for too long at the highest levels of one of the nation's best-known companies, men who accepted large salaries and tremendous responsibility for running a corporation and failed in their duties. They have gone on to other high-paying jobs or retired with generous benefits. The people who paid most dearly for these mistakes are the shareholders and employees of BankAmerica, who lost their income, jobs, and, in many cases, their pride."

In reading this book it becomes clear that perhaps the biggest black hat was a collective one — that is, the chief culprit was the flawed BankAmerica system. The bank functioned as a kind of civil service: Employees sacrificed competitive salaries for the implicit promise of lifetime employment.

An American Banker Special Report

Spain's Banks Fear Foreign Conquistadors Will Enter as Cross-Border Barriers Fall

By JOHN J. DUFFY

Second of a Series

European 1992 Countdown

MADRID — In 1987, when major banks in New York and London reported some of their largest losses in history, banks in Madrid were awash in profits. While other Western banks wrestled with problems of Third World debt and the effects of the October crash, the Big Seven Spanish banks reported a whopping 29% jump in 1987 pretax profits to $2.7 billion.

In 1988, however, Spanish bankers are worried. Despite the current welter of riches, members of the clubby Madrid banking fraternity are watching their familiar world fall apart. Long ruled by autocratic septuagenarians, Spanish banks have recently been shaken by the influx of a younger generation that is determined to shed many of the traditions that became entrenched by decades of social and economic isolation under the dictatorship of Generalissimo Francisco Franco.

What is the root of all the turmoil?

"That is the $64,000 question," said Luis Llubia, head of the Madrid office of the Arthur D. Little consulting firm and a former director of the Banco Urquijo. "To a large extent, this is being caused by 1992."

El Horizonte 92, as it is known here, is the year when the barriers separating the financial services industries in all 12 member states of the European

Italian Bank Sweetens Bid For Irving

$80 per Share Offered, Plus Special Dividend

By BART FRAUST
and GORDON MATTHEWS

NEW YORK — Banca Commerciale Italiana on Monday increased its friendly offer for 51% of Irving Bank Corp. to $80 a share from $75 a share.

In addition, Banca Commerciale said it will pay a one-time special dividend of $10 a share on remaining Irving shares if the acquisition is completed.

The higher offer put increased pressure on hostile bidder Bank of New York Co. to increase its offer or drop out of the race.

Earlier on Monday, Irving said that final results of the voting at its May 6 annual meeting confirmed that it had defeated Bank of New York's proxy bid to gain control of Irving's board.

And in a reversal of the preliminary results announced last week, Irving said it had also beaten back a Bank of New York proposal that would have allowed any holder of 10% of Irving stock to call a special shareholders' meeting. The earlier count had shown that Bank of New York won on this proposal.

Bank of New York, which has charged that 600,000 votes in its favor were not counted, is expected to launch a court challenge of the proxy votes.

Owen Brady, a Bank of New York spokesman, said the sweetened offer was expected. "But we think it's worth about what the other offers were, since it has no regulatory approval and no definite assurance of approval," he said. "And, of course, they are abso-

➔ Continued from Page 1

In the end, of course, they got neither. The failure to pay adequate salaries led to staff mediocrity, which sapped the bank's lending capabilities and contributed to the outsize losses that eventually necessitated large personnel cutbacks.

Mr. Hector attributes the difficulty in part to a twisted interpretation of the Giannini tradition. The policy of lifetime employment initiated by Giannini during the depression lingered too long. Marginal and submarginal employees were not fired; at best they were transferred. Good employees were not compensated appropriately.

When a fast rising young executive was wooed by another financial institution, the bank let him depart rather than raise his salary. "We did not want to become an elitist institution," said one former BankAmerica personnel executive.

There was precious little danger of that. In August 1981, a lengthy report entitled "Account Officer Problems" was prepared for the top executives of the world banking division. It argued that the bank's lenders simply did not stack up to the competition. From 1976 to 1980, the bank's rating on calling officer competence, as measured by Greenwich Research Associates, had been sliding at an alarming pace.

The report's author, Jim Nelson, said: "I spent most of my time . . . trying to explain to management the severity of the situation without sounding like Chicken Little." What was management's reaction? "They didn't want to hear it," says Nelson. "And if they heard it, they didn't know what to do about it."

Nelson's opinion of BankAmerica lenders reminds one of Ed Yeo's attitude toward First Chicago's staff in the late '70s. The crusty former chief financial officer argued that First Chicago's calling personnel shouldn't be allowed to call. He said: "If the daughters of the house get themselves compromised whenever they go out, they should be prohibited from having dates." Just as Ed Yeo failed to get Bob Abboud's attention, Jim Nelson was unable to reach Messrs. Clausen and Armacost.

Even more damning, top management apparently exacerbated the situation. Writes Gary Hector: "In the years since 1977, Clausen and Armacost had tightened the purse strings. Money flowed to the people making loans and increasing profits, or to sexier investments in computers. One of the areas hit hardest by cost controls was the audit and examining function. . . . Credit administration, the unit that reviewed loans before they were made, also felt the knife. Clausen and Armacost were confident that these units were doing a good job and didn't need big investments."

How wrong they were! The failure to appreciate the shortcomings of the lending staff and the inadequacy of the credit oversight function constitutes a major indictment of the administrations of Clausen and Armacost. If they were indeed derelict in this area, both men, regardless of whatever else they did, deserve the stigma of being labeled "black hats."

□ □ □

Even banks with staffs of the highest professional caliber are finding it increasingly difficult to lend to commercial borrowers at satisfactory risk-adjusted rates of return. Indeed, as this column has repeatedly noted, a large number of banks still don't employ suitable methods for adjusting returns for risk.

Hence they continue to lend at rates that superficially seem attractive but are in reality woefully insufficient. The value of loans so generated is less than par. The bank might just as well have purchased a passel of bonds at over their market price.

How does one compute an adequate risk-adjusted return? One simple if somewhat incomplete method is to array loans according to an estimate of the bond rating the borrowers would receive if they had access to the public credit markets.

Suppose that a particular borrower is judged to be a triple B credit. And suppose that the marketplace is charging triple B borrowers 250 basis points more than it charges the U.S. Treasury for credit of comparable maturity. Then the loan officer should be expected to price the credit at 250 basis points above the treasury rate.

That differential, which is analytically equivalent to a self-insurance premium, must be subtracted from the loan yield in order to approximate the true profit on the credit. Unless the loan officer charges at least that 250 basis points above the treasury rate, he isn't really earning a profit at all.

□ □ □

Another, perhaps more scientific method of determining risk-adjusted prices is based on detailed analysis of expected and unexpected losses. Credit risk can be subdivided into expected losses, which can be derived from the average annual loss experience of borrowers in a given risk class, and unexpected losses, which reflect the variability of chargeoffs and are measured by computing the standard deviation of losses over a number of years.

Lenders should be able to charge enough to cover expected losses and some proportion of the unexpected losses. Data from the securities markets indicate that lenders typically demand a premium equal to the expected or average loss plus an additional premium amounting to one half the unexpected losses or the standard deviation.

Say that the bank wants to lend to a B-rated borrower and that, over the last few years, average defaults of B-rated borrowers amounted to 143 basis points while the standard deviation of losses over the same time horizon totaled 373 basis points. Then the bank's breakeven charge must at least be equal to its cost of funds plus its functional cost plus an additional 330 basis points (a spread equal to the expected losses plus half of the unexpected losses).

If its loan charge exceeds this figure, the bank is making a profit, although perhaps not an adequate one. If its charge falls short of this figure, it is not even covering its risks. Once again, the value of the loan, if sold in a competitive market, would be less than par.

To be sure, even a spread of 330 basis points would be insufficient, since it is based on the assumption that the bank holds a completely diversified portfolio of B-rated credits. Because banks typically lend to only a small part of the universe of borrowers in any given risk class, the standard deviation of their loan losses is much higher than it would be if they were completely diversified.

Therefore the bank must charge more than a 330 basis-point spread. How much more will depend on (1) the number of B-rated borrowers to which it lends relative to the total of B-rated borrowers and (2) the extent to which the fortunes of its borrowers are intertwined, as measured by their coefficient of correlation.

□ □ □

What should banks do if they can't charge high enough loan spreads? Simply don't lend. Shrink the C&I portfolio and put the investable funds into a portfolio of corporate bonds, provided the duration of these callable instruments can be properly estimated and the portfolio match-funded in the swap market.

The functional costs of bond investment are lower than those of loan administration; it is easier to diversify a bond portfolio than a loan portfolio; and because the variability of losses in a properly diversified portfolio of investment-grade bonds is so low, its risk-adjusted return can actually be higher than that of a portfolio containing lower-grade, higher-yield credits. (Additionally, bank holding companies invest in noninvestment-grade bonds, which, if properly diversified, should generate reasonable risk-adjusted yields.)

Of course, bankers won't take this advice. The business of banking, they argue, is to make loans, not buy bonds. Making loans is macho and challenging; buying bonds is wimpy and passive. The real issue, however, is whether management exists to serve its own need for challenging jobs or the shareholder's desire to maximize wealth. ■

LETTER TO THE EDITOR

Comptroller's Official Cashes in on Game Show

To the Editor:

I couldn't help but wax nostalgic at your item on "Capital People" (May 9, page 10), concerning Fed staffer Stephanie Martin's recent appearance on "Jeopardy!" Let it be known that the Comptroller of the Currency's staff has fared far better on the game show circuit, demonstrating its superiority in matters of trivia and general knowledge. I appeared on four "Jeopardy!" shows that aired in October 1986 and January 1987, winning $17,000 in cash plus $3,000 in prizes. These shows were watched not only by OCC staff members throughout the country, but also by many outside attorneys who have started our conversations with, "I saw you on 'Jeopardy!' " Considering the amount of notoriety I've received from appearing on that show, I think the prize money was pretty inadequate!

Sharon Miyasato
Senior Attorney

The BIG Decision

Community banks choose between in-house processing or buying services from an outside source. Either way, the grass always seems greener on the other side.

By Thomas P. Fitch

WHEN NATIONAL BANK of the Redwoods, a $69 million-asset bank in Santa Clara, Calif., opened its doors for business in January 1985, it had plenty of company. Ranked 31st in a community of 100,000 banks, it had to find a niche quickly, offering something the competition had overlooked.

That something extra turned out to be a cash management service for small businesses. A survey of local businesses revealed a very high percentage, 70%, owned personal computers. Capitalizing on that fact, Bank of the Redwoods began offering them the ability to move money around different accounts electronically by sending instructions from their own PCs.

It cost $65 a month per account. The bank's Electronic Banking System, as the product is called, generated $70,000 in fee income last year. Nearly half the users switched their accounts from other banks to take advantage of it.

Making this success story possible was a decision several years ago to buy a powerful minicomputer, a Data General MV/4000, for all the bank's data processing needs. The bank's directors "did not want to be handcuffed" by dependence on a data processing service bureau, says Bryan Klinger, vice president of operations.

"Being independent businessmen, [management] insisted on creating their own banking environment," he says. Moreover, the bank did it all without hiring a programmer.

An unusual story? While Bank of the Redwoods went to greater lengths than most community banks, it is following a path taken by hundreds in the last few years.

The bank got some extra assistance from its vendor, Software Alliance of Berkeley, Calif., but most small bank systems are so-called "turnkey" systems requiring no full-time programmers either to set up or operate. A bank choosing a turnkey package gets on-site training and a help line, but it is otherwise on its own.

Taking the reins of its own data processing also suited the Pioneer Bank of Longmont, Colo., a bank with $17 million in assets about 50 miles from Denver. "We realized that if Pioneer was going to be a successful retail bank, service was going to be our No. 1 priority," says Roger Kopman, Pioneer's executive vice president.

After its servicer raised its prices, Pioneer looked for an alternative, and found one in BankVision, a turnkey system running on an IBM System 36, by Hogan Systems Inc., Dallas.

Mr. Kopman figures the bank's conversion a year ago paid off in several ways. Data processing costs were cut in half, from $11,000 to $5,500 monthly.

"With the service bureau, we had two CRT [cathode ray tube] screens," he says. "Now we have a dozen. Tellers don't have to share screens. We have even installed screens so customers can call up their own records instead of waiting in line."

OVERVIEW

Just a few months ago, Gainesville National Bank, Texas, a bank with $120 million in assets, also decided to switch to a System 36. "Service bureaus are just not at the leading edge most of the time," says Marcia Neal, the bank's cashier. Gainesville National wanted integrated financial accounting combining its general ledger

Continued from Previous Page

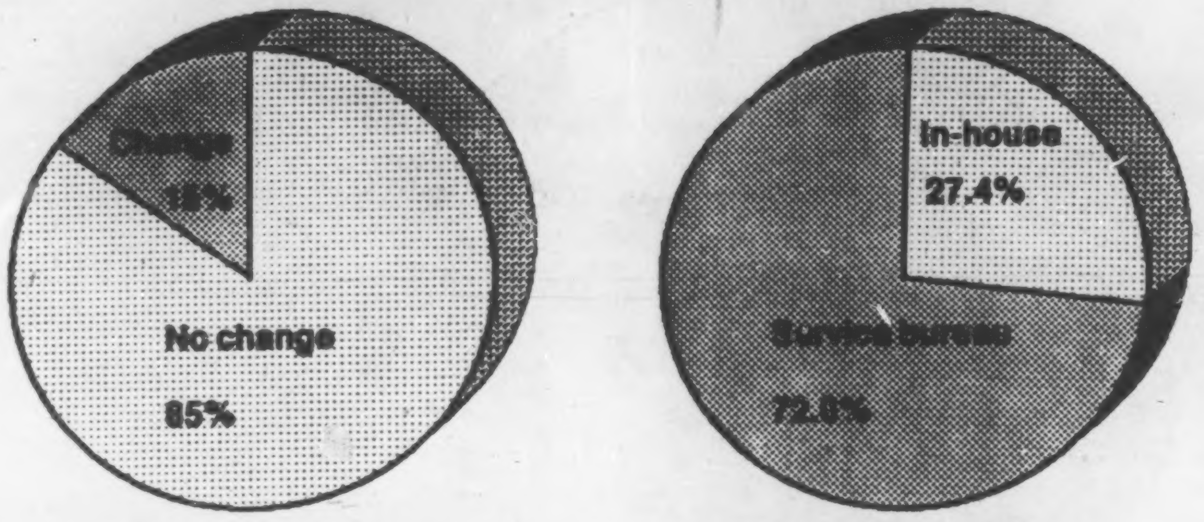
with deposits and loans.

"To get that from our processor — a correspondent bank — would have taken a very long time," she adds. Gainesville National expects to have that ability after a conversion this fall.

Despite its appeal to the independent-minded banker, in-house computing has a long way to go before it ever overtakes service bureaus, the traditional source for smaller institutions. Several years after minicomputer systems like System 36 became a viable alternative, more than half of the U.S. commercial banks still have their data processing performed remotely, from a telephone link to a correspondent bank or an independent servicer.

Back in the early 1980s, when regional banks began exiting the data correspondent/data processing business in droves — according to some estimates, at least 350 banks dropped out of the service bureau business — it looked as though in-house processing might eventually win out in the battle for the community bank market.

Looking at the Alternatives



In a survey conducted among 2,050 community banks during the last quarter of 1987, 307 expected to study a change in their data processing base in the coming year.

Of the 307 community banks considering a change, currently 84 were doing their data processing in-house and 223 were sending the work out to service bureaus.

Source: Hancock Information Group Inc., Altamonte Springs, Fla.

So far, that has not happened, and the reasons why have more to do with the reluctance of many bankers to plunge into the data processing business than the availability or affordability of the hardware. Still others, after testing the waters, have gone back to service bureaus after finding their needs have outstripped their in-house minicomputers that five years earlier seemed such a bargain.

Less to Worry About

For many, letting a service bureau tackle the back office grunt work means one less thing to worry about, even if they give up a little flexibility.

James Murphy, chairman of Inter City Bank, Benton Harbor, Mich., observes that a service bureau contract (with Systematics Inc.) was, for him, the right choice: "In some areas we obviously missed the ability to do some customizing," says Mr. Murphy. "But it gave us the ability not to be in the data processing business on a day-to-day basis, and that's worked out very well."

Service bureaus may be losing ground to the alternatives, but the slippage is almost imperceptible. Service bureaus in 1987 had a 59.4% share of the community bank market compared to 60.4% a year earlier, according to a survey done for the National Association of Bank Servicers by Hancock Information Group, an Altamonte Springs, Fla.-based research firm.

Meanwhile, the percentage of banks using in-house processing climbed slightly, to 40.4% in 1987. The change is hardly enough to signal a trend.

Often enough, the event triggering the choice for an in-house system is a pending price increase by a service bureau. Security State Bank, a Pharr, Texas-based bank with $69 million in assets, dumped its service bureau four years ago when the servicer announced a 14% price hike.

"Whenever I talk to bankers, their main concern is always cost," says Joe Brown, a senior vice president at Security State. "It shouldn't be, really. We wanted the flexibility of being able to make decisions ourselves."

'Absolute Hooey'

Bankers who say they are saving money with an in-house system are comparing apples with oranges, contends John A. Williams, president of Computer Services Inc., a Paducah, Ky., servicer for 170 banks in the Midwest. "The cost issue,' says Mr. Williams, "is absolute hooey."

Banks that put in their own computers without adding employees were overstaffed to begin with, he contends. "My largest component of cost," he adds, "is people, which accounts for 45% to 50% of my revenue dollar. People have always run over two-to-one over hardware. The same is true for an in-house system."

Then there is built-in obsolescence and changes in regulations to deal with. Mr. Williams figures a bank will have to set aside 15% to 20% of a computer system's original cost upgrade or to replace it after 5 to 7 years.

It is almost enough to make a banker wish for the good old days when service bureaus took care of everything. Comments by several community bankers surveyed recently by Hancock Information Group reveal some of their frustrations.

A Kentuckian from a bank with $42 million in assets noted: "The trend of the 1980s is reversing itself. Most people who went in-house paid for a Volkswagen and expected a Cadillac. Servicers are encouraging banks to come back to them."

Finally, one Pennsylvania banker from a $110 million-asset bank had this observation: "I think people will go in the opposite direction of what they're doing now. The grass is always greener on the other side. Until you've tried both you're not happy." ■

Easy Access To Information Services Gives You That Competitive Edge

Now there's a better way to compete in the hectic world of finance. It's called STX—a software package that gives you quick, cost-effective access to the information services you need—all from an IBM 3270 terminal. STX gives you the ability to access a variety of data networks such as legal data bases, stock and bond retrieval services, and electronic mail. It can also help access other non-IBM applications. And with STX, there's no need for extra terminals, modems, or phone lines.

STX does the work for you. For instance, financial institutions use STX to do the repetitive job of signing on, making the dial-up connection, and accessing the latest financial market information.

Some benefits STX provides include:
- Dramatic Productivity Gains
- Easy Auditing
- Complete Security
- Substantial Time Savings

In the ever-changing financial community, can you afford not to compete? For a free copy of "Understanding STX," please call (800) 323-2600 or (412) 323-2600 in Pennsylvania.

COMMENT

The Southeast — a region whose banks are showing healthy profits and capital-to-assets ratios — has strong economic reasons for advocating full national interstate banking laws, says Robert P. Forrestal, president of the Federal Reserve Bank of Atlanta. 4

TECHNOLOGY

The written signature is making a comeback as the most desirable method of ascertaining a person's identity. An American Banker *Special Report looks at developing technology for signature verification. It begins on page 5.*

The implications of signature verification systems are vast for bankers, retailers, and other corporations that fear their systems or premises are vulnerable to fraud or unauthorized entry. Although it is still viewed as a long-term proposition, vendors are increasingly going public with products and plans. 5

Two French merchant banks soon will begin testing a signature verification system as a security measure in their wire transfer rooms. TITN is the Paris-based computer engineering firm developing the system. 5

Cheque Alert Inc., New York, is promoting DigiScan. Unlike a dynamic system, which validates "live" signatures as they are written, DigiScan takes its measurements from signatures already on paper. 6

Worth Repeating

The White House blew it by waiting too long. It's politics. Politics gets very nasty before an election.

Margery Waxman, a partner with the law firm of Sidley and Austin, on President Reagan's announcement that he would nominate John P. LaWare for the Fed seat that has been vacant since December 1986. [Page 2]

17-Nation Pact Unifies Payment Systems

By JOHN J. DUFFY

Third of a Series

European 1992 Countdown

LONDON — For Europe Inc. to get its business off the ground after 1992, European bankers are going to have to do more than just compete effectively. In some areas they are also going to have to cooperate.

One of the areas that will require the greatest amount of cooperation is payment systems. For, if all the rhetoric about selling to 323 million consumers across Europe is to amount to more than just hot air, those consumers are going to need a quick and efficient way to make payments across borders. By 1992, bankers agree, that means paying with plastic.

Plastic cards — credit, debit, cash, and charge cards — have made dramatic inroads in Europe since the early 1970s, but only in a patchwork way. Countries with a bustling tourist trade such as Spain and France have moved into the plastic age with a vengeance, creating universal electronic systems that accept cards for everything from groceries to traffic tickets. In other countries, such as West Germany and the Netherlands, major banks have blocked the introduction of mass-market payment cards and consumers still make 90% of all their retail purchases with cash.

With the great push toward 1992, however, the drive to overhaul the European payments structure has begun to pick up speed. Last October, 40 banks in 17 countries that are members of the European Council for Payment Systems agreed to a document known as the European Accord.

The accord encompasses the 12 European Community countries, Scandinavia, Switzerland, and Austria. It sets a plan in motion by which banks hope to make all their payment cards and systems compatible by the early 1990s.

The goal initially will be complete card compatibility in automated teller machines. By the early 1990s, bankers say this could mean a common ATM network of 40,000 machines stretching from the Atlantic Ocean to the Aegean Sea. Ultimately the plan is to extend

European Accord: Page 22 ➻

Renewed Push Needed for National Interstate Banking

The following is excerpted from an address delivered March 15 by Robert P. Forrestal, president of the Federal Reserve Bank of Atlanta, to the Big Bend chapter of the Bank Administration Institute in Tallahassee, Fla.

□

AS YOU ALL KNOW, bankers in the Southeast stood out as leaders in promoting the spread of interstate banking earlier in this decade. Florida and Georgia were among the first states to pass laws allowing bank holding companies from other states to purchase banks within their borders.

This type of state banking legislation has also been adopted by other southeastern states. It carried the condition, however, that this privilege should be extended essentially within the immediate Southeast region. Banks from outside the region are still barred from entry.

While the regional compact arrangement was a progressive move at the time, the momentum of geographic deregulation has shifted to national rather than regional arrangements. Of the 40 or so states that have some form of interstate banking legislation on their books, seven permit unrestricted entry by holding companies from other states.

A few others allow entry by banks from reciprocating states anywhere in the nation. By 1990, legislation now in force in about half the states will open their borders entirely to nationwide banking — or at least allow such reciprocal arrangements.

Clearly, the most efficient way to proceed toward nationwide interstate banking would be for Congress to enact such legislation. However, I do not think we will see any significant movement on the part of lawmakers in Washington in the near future.

For that reason it may be time for state legislatures in the Southeast to consider taking the initiative again and allowing entry to banks from outside the region. I think there are several reasons why further progress toward interstate banking makes good sense, from the standpoint of both bankers and consumers.

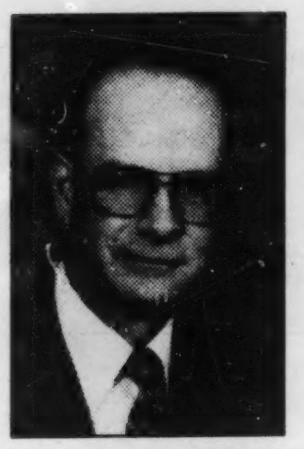
Local Character Not in Jeopardy

Let me begin by answering the argument of most opponents of nationwide interstate banking in the Southeast and elsewhere. These critics say that the local character of our banking markets should be protected against manipulation by outsiders. They view these outsiders as insensitive to local needs.

In many ways, this is a reincarnation of earlier arguments against the expansion of bank holding companies within the states. Owners of small banks staunchly supported such a view because they feared they would not be able to compete against large, urban-based institutions.

Indeed, a similar logic — one that was even more protective — previously led to prohibitions against the opening of branch banks outside a parent bank's home counties. This provision is still on the books in some states.

Just as these past concerns proved to be unfounded, I feel there is no reason to believe that well-managed banks in our region would be damaged by the onset of nationwide interstate banking. The Southeast's banks are in excellent shape to meet competition from outside institutions.



The Southeast's banks are in excellent shape to meet competition from outside institutions. We can see this most easily when we compare banks by . . . capital rather than size.

— Robert P. Forrestal
President
Federal Reserve Bank of Atlanta

We can see this most easily when we compare banks by measures of capital rather than size. It is true that only a few of our banks rank among the top 25 in the nation in total assets.

Profitability Paints the Picture

However, southeastern banks perform especially well when measured according to standards such as profitability and capital-to-asset ratios, which give a better picture of relative strength. Our large banks actually begin to look dominant when we consider the prices of their stock.

Their consistent good performance implies that investors remain bullish on our region's banking institutions. The access to new markets that would come from liberalizing current restrictions could allow banks here to become even stronger.

At the same time, I have no concern that the responsiveness of banks to local conditions would disappear. Over the years, experience has demonstrated the need for close-up knowledge of local markets in making loans.

Banks headquartered outside a local area have strong incentives to use people with such expertise. Otherwise they may not be able to compete successfully in local markets.

Rather than becoming insensitive, it is much more likely that the outsiders will bring in new products and new ways of doing business. These innovations in turn will increase the variety of services available in the community and make for more competitive pricing.

Local banks must adapt to new competition. But, when faced with challenges like these, most have shown that they can adapt successfully. At the same time, recent history in Atlanta, Florida, and elsewhere provides ample evidence that new banks will quickly be established to take up the slack if existing institutions fail to meet the needs of local markets.

Competition Brings Benefits

For these reasons, I do not believe our banks and the communities they serve have any real need to fear competition from outside banks. In addition, there are tangible benefits that nationwide interstate banking would bring to consumers and businesses in this region — indeed, throughout the country.

The most compelling case for broader interstate powers is that greater competition among existing banks and the potential new entrants into local markets would tend to enhance banking products and prices for all of us. This would be true even for individuals and businesses in areas where no interstate banking firm actually set up shop. Just the possibility that such a competitor was waiting in the wings to pick up any slack in service would tend to enforce market discipline on existing banks.

When we add up the likely effects of full interstate banking, the benefits seem to outweigh the costs. Banks in the Southeast have much to gain from further developing their links to money and capital markets outside our region.

Our banks also have much to lose if they are left behind by financial institutions in other states and regions that are more directly and efficiently strengthening their integration to the nation's and the world's financial networks. Thus, I feel it is time to make a renewed effort to achieve full geographic deregulation. ■

LETTER TO THE EDITOR

Mutual Fund Rule Changes Would Not Usurp SEC Authority

To the Editor:

I am concerned that the story titled "Comptroller May Broaden Fund Powers," which appeared in your May 19 edition [page 1], may mislead your readers into thinking that this is a new idea to give banks new mutual fund powers beyond the reach of Securities and Exchange Commission regulation. In fact, changes in the rules governing common trust funds have been under consideration for the for the past six years. These changes would be entirely consistent with existing law.

In 1982, the Office of the Comptroller of the Currency published a notice in the *Federal Register* asking for comment on several parts of our trust fund regulation, including advertising of common trust funds. In January 1983, the *American Banker* reprinted a speech I gave on this same subject. In the speech, I noted that we were currently drafting regulations on commingled investment funds that would include, among other things, modification of the advertising prohibition and modification of the management fee provision.

The Comptroller's office suspended action on these regulatory changes pending the outcome of extensive litigation on commingled individual retirement accounts. However, in late 1986, after four favorable court rulings, the Comptroller's office again began drafting a proposed rule on this subject. This effort was repeatedly noted in the Comptroller's semiannual regulatory agenda, which was published in the *Federal Register*. I have also continued to mention in speeches that we were drafting this proposal.

Most importantly, I believe the statements made by the Investment Company Institute in this story misrepresent the situation. The Comptroller's draft proposal would not change existing legal requirements that common trust funds be offered for fiduciary purposes and not solely for investment purposes. We have repeatedly said, and the courts have agreed, that banks may advertise any service they may lawfully offer. The removal of advertising limitations for common trust funds would not allow banks to advertise services (such as garden-variety mutual funds) that they may not offer under current law.

In addition, the proposal would not usurp in any way the SEC's authority to regulate bank collective investment funds to the extent allowed under the federal securities laws, just as the SEC now regulates collective IRA funds offered by banks.

The proposed rule is still in draft form. Before it can be published for comment, it must be reviewed and approved by senior Comptroller officials and then submitted to the Treasury Department and the Office of Management and Budget for their approval.

European Accord Seeks to Unify Payment Systems

➻ Continued from Page 1

this reciprocity to payment cards accepted by retailers, creating the first international cashless shopping network.

"The objective is to widen the choice of consumers without losing the competitive edge among banks," said Ben van Eldik, president of the European Council and a director of the Dutch cooperative bank, Rabobank Nederland.

The accord has been greeted with some praise and a good deal of suspicion. It has been praised as the culmination of 10 years of talks within the European council on ways to achieve greater cooperation on payments systems. It has aroused suspicion because it touches on old and bitter rivalries between the existing payment systems and the banks that stand behind those systems.

The major rivals in Europe today are Eurocard, a charge card system prevalent in the northern countries; Visa, the global payment system that is dominant in the south; and Eurocheque, a paper-based check-guarantee system with long-standing ties to the German banks.

Eurocard International, headquartered in Brussels, is 15% owned by Mastercard International and 35% by Eurocheque International. Eurocard/-Mastercards are issued under the name of Access in Britain and Carte Verte in France.

Visa International is an evolution of the BankAmericard launched in 1958. In Europe, the Middle East, and Africa, Visa is now a local autonomous unit run by a board of Visa banks in the three areas. Headquarters are in London.

Eurocheque International was created in 1968 by Dr. Eckart van Hooven of Deutsche Bank to provide a standard procedure for check cashing at banks in 15 countries. Today most banks in Europe issue uniform Eurocheques and Eurocheque cards. The cards are used as check-guarantee instruments and also in a 3,120-machine ATM network. Headquarters are in Brussels.

At the moment, the accord remains an agreement between banks: the payment systems operators themselves have been kept out of the discussions. Yet the bankers realize that if a common European payments network is ever to come into being, then the existing systems and their vast telecommunications and data processing facilities must form the heart of it. Therein lies the source of much of the current discord surrounding the European Accord.

"The orthodox view is that the payment systems are owned by the banks and the banks should make all their assets sweat, including the payments systems," said John Buxton, operations director at the Association for Payment Clearing Services in London and the secretary to the European council.

The accord in that sense is very much a declaration of independence by the European banks. As the single European market begins to take shape in the next five years, many of these banks say they will no longer be content to play second fiddle to the payment systems — especially to payment systems that are still perceived in some circles to be controlled by Americans.

Accord Requires Reciprocity

The accord is more a statement of intent than a technical blueprint of how the system will work. At its heart, however, are the twin concepts of proprietary-card reciprocity and systems-based reciprocity.

Reciprocity for proprietary cards — that is, cards issued by banks largely for use in ATMs — will be by far be the easiest of the two to achieve. The accord envisions that banks issuing ATM cash cards will emboss them with a new European logo.

The logo will also be displayed on the ATM machines themselves and at teller windows of banks that are participants in the accord. The result is that cardholders need only look for the logo to know they can get cash, in the local currency, anywhere in Europe.

Certain software systems will have to be rewritten and banks will have to decide what fees they will charge for servicing each other's customers. But bankers say these are minor problems than can be dealt with fairly quickly.

"The ATM side of things is closer to achievement because the banks can do it themselves," said J. Christopher Wathen, payments services director at Midland Bank. "Eftpos is further away because our different national systems are at vastly different stages of development."

Eftpos, or electronic funds transfer at the point of sale, is indeed the long-term objective of the European Accord. It is envisioned that in the future the major European payments systems may also choose to emboss their cards with a European logo. Retailers belonging to all these systems would also display the logo.

Thus, in the grand vision of the accord, all the major payment systems in Europe would be brought under the European umbrella. Visa merchants would accept Eurocards. Thousands of Eurocheque merchants in central Europe would accept credit cards for the first time.

Building an Electronic Gateway

And most important, an electronic gateway would be built between Visanet, the Visa processing system, and European Payment System Services, the Eurocard system, allowing European banks access to the entire payment system infrastructure.

In practice, the European Accord — like most grand visions — will be difficult to implement. After decades of intense competition, the prospect of Europe's payment systems cooperating with each other prompts reactions ranging from uncertainty to outrage. In particular, banks that already possess successful card operations see little reason to add a new logo to their cards.

"If it adds value for our customers, of course we'd look at it," said Seymour Fortescue, director of U.K. retail services at Barclays Bank PLC. "But it will have to give us coverage in a lot more merchants if it is to add value," he said. Barclays is one of the largest Visa card issuers in Europe.

Reaction within the Visa organization has been less equivocal. Visa executives in London say the accord is a blatant attempt by one group of bankers who are either trying to gain control of the Visa system or to slow its development until they can come up with a competing system of their own.

"We are talking about the Germans — specifically the Deutsche Bank — and the Dutch. What they want to do through the plot of achieving reciprocity is to create a single European system and absorb everybody else," said Joao Ribeira da Fonseca, chief general manager of Visa International for Europe, the Middle East, and Africa. "Their strategy of going through a political game to absorb us is not going to work," Mr. da Fonseca said.

At Eurocard the reaction was friendly but guarded. "The good news as far as Eurocard is concerned is that bankers are thinking more and more in terms of cards," said Ann Cobb, managing director of Eurocard in Brussels.

Joseph A. Rice
Peter C. Palmieri
David G. Taylor
} Directors

"What is lacking are the details."

The details will indeed be troublesome. At the pan-European level, the major problem is how to cooperate without breaking European commission rules on free competition. The accord has angered Visa and American Express, which have called it disciminatory and anticompetitive. The commission's antitrust division, Direction Generale IV, is looking into the allegations.

The problems stem from parts of the accord that appear to discriminate against non-European cards and non-European institutions. For example, its says cards issued outside Europe may be eligible for European reciprocity "only with the collective agreement of the participating banks." European bank participants must also adopt "a common position for relations outside Europe" the accord states.

To American Express, with three million cardholders in Europe, this language smacks of a cartel. "The European Accord as it is currently proposed is not procompetitive, and we remain opposed to it," said James T. Larkin, an executive vice president at American Express. "We will only support an accord which provides for open and shared networks on an open and shared basis."

Total	**41,591**

Source: "The Retail Banking Revolution" by Dimitri Vittas, Patrick Frazer, and Thymi Metaxas-Vittas.

Backers of the accord admit to some astonishment at the uproar the document has produced. They say that banks that are a party to the accord will still compete with each other by offering different products and services. And the payment systems will be free to price their network services in any way they choose. European bankers say once the service is up and running American Express will probably be welcomed — at a price.

"We do not have the intention to diminish competition or to build a European cartel," said Mr. van Eldik of Rabobank. "And we certainly could not forbid any European bank from making an arrangement with American Express. That is ridiculous."

Mr. van Eldik added that the language of "collective agreements" and "common positions" in the accord is only to protect European banks from being forced to accept cards they don't want. It does not, he said, forbid banks from making third-party arrangements.

"You should not oblige a Belgian bank to accept a Visa card issued in Japan just because a Spanish bank has agreed to," he said. "That is a matter for bilateral agreements."

Harmonizing Fee Structures

Another major problem for the accord is harmonizing widely different fee structures. Eurocheque — widely used in Germany, the Netherlands, Belgium, and Luxembourg — currently costs retailers nothing. The card systems require merchants to pay a fee based on a percentage of the transaction — the merchant discount fee.

Experts say that in any shared system the merchant fee would probably gravitate to a midpoint between the zero Eurocheque base and what the other card issuers charge. The result will be unpopular on both sides. Costs for Eurocheque merchants will undoubtedly rise and revenues for Eurocard, Visa, American Express, and others will probably fall.

Amid all the problems that must be overcome, experts say the technical problems of making different systems interact with each other are probably the least onerous. "We could interface with Visa in probably a week if there was the will to do it," said Eurocard's Ann Cobb.

At the moment, she admits, the will does not exist. "The card market in Europe is not a developed market," she said. "One way of competing in that market is through your systems, so no one is anxious to share those systems."

Mr. da Fonseca of Visa is adamant about not sharing. "They have nothing to offer us," he said, referring to the Eurocard/Mastercard organization. "I am not going to build a bridge or a gateway to the sea."

Bankers said, however, that the decision of whether the payment systems will participate in the accord will ultimately not be made by Ms. Cobb or Mr. da Fonseca. It will be made, they say, by the bankers themselves who sit on the boards of directors of each organization.

"If we as bankers want Visa and Eurocard to build an interface, it will happen," said Mr. van Eldik of Rabobank. "If we as bankers are determined to create this thing to help our customers and ourselves, it will be created."

Next: Although bankers in Switzerland have long recognized the need to participate in a unified European financial system, Swiss political observers say their nation's habit of neutrality appears too deeply ingrained for it to accept membership in the European Economic Community.

Chase Account Offers Rising Rate

NEW YORK — Chase Manhattan Bank has introduced a savings account that pays a market rate and offers a yield that increases over time — provided no withdrawals are made from the account.

"This product rewards savers," said Michael S. Cassidy, a Chase senior vice president. "Instead of 'promotional' rates — which often confuse customers — we are offering a competitive rate with a feature that increases the yield for people who save over a period of time." Interest on the account, which Chase has dubbed Dividend Savings, is now at 6.25%.

In the quarter a customer opens a Dividend Savings account, the interest earned is 6.25%, with a yield of 6.45%. If there are no withdrawals, there is a "dividend" equal to 2% of the interest earned the next quarter — raising the yield to 6.58%. In successive quarters, if there are no withdrawals, the "dividend" increases to 4% of earned interest — producing a 6.71% yield.

Dividend Savings requires a minimum deposit of $1,000. And the account's interest rate is subject to change quarterly. ■

Today

M. Danny Wall asked for a one-year extension of the moratorium that bars thrifts from leaving the FSLIC. The Bank Board chairman said the time is needed to counter the "perception that without the moratorium there may be a major exodus from the FSLIC." ____ 2

Canada's House of Commons is conducting a round of hearings in a continuing examination of bank disclosures of fees and fee increases. ____ 2

Congress is considering measures that would force financial institutions to substantially increase the amount of information they disclose to the public about commercial loans. ____ 3

The mutual fund industry expects a 45% decline in new fund sales this year, according to a survey by Drexel Burnham Lambert. But respondents expressed confidence in their industry's long-term health. ____ 24

In the News ____ 3

COMMENT

Why MBAs make such poor writers in the business world and what can be done to improve their writing skills is addressed by Joyce Pharris in an article adapted from the *Stanford Business School Magazine.* ____ 4

THRIFTS & MORTGAGES

Southern California lenders are ecstatic about soaring real estate prices. They expect to outperform previous record years with ease — and they can do so by writing fewer loans. ____ 6

Economist Michael C. Aronstein foresees downward pressure on home prices for the next 10 or 15 years. A principal in the money management and investment firm of Comstock Partners Inc., Mr. Aronstein recommends bankers replace upscale home and condo loans with high-quality, long-term debt. ____ 6

Thrifts and banks are using derivative mortgage securities successfully to remedy maturity gaps and protect against exposure to interest rate risk, writes Andrew S. Carron in the Observer column. ____ 8

Consolidation continued in 1987 as the nation's top 300 thrifts increased their share of the industry's deposits to 62.7% from 59.3% a year earlier. During the year, the total number of thrifts declined by 6.1%. ____ 10

Glenn R. Wilson Jr., who resigned last year as president of the Government National Mortgage Association to lead a Nebraska mortgage company, has been named president and chief operating officer of Knutson Mortgage Corp., Bloomington, Minn. ____ 5

Worth Repeating

We are within striking distance of dealing with all the problems with the funds available to us now.

M. Danny Wall, Bank Board chairman. [Page 3]

Thrifts Attract Diverse Array of Buyers

Nonthrift Acquirers Drawn to Cash, Positioning, Accounts

By LINDA ELLIS

NEW YORK — While regulators are putting together shotgun weddings of Energy Belt savings institutions, a growing number of thrifts have been wooed and won by nonthrift companies.

In the last few years, businesses that have reached out to the thrift industry for a partner include a child care services firm, insurance companies, private investors, mortgage bankers, a timber company, and a consulting concern.

Just this week, the Federal Home Loan Bank Board gave its approval for Hawaiian Electric Industries Inc., Honolulu — the state's major utility — to acquire Hawaii's second largest savings and loan association, American Savings Bank, Honolulu. The $112 million deal came about because Hawaiian Electric, like many other utilities, is flush with cash and looking for opportunities to diversify.

In most cases the thrift brings a dowry of synergy or dollars or both. The thrift's customer base can be used for cross-selling, or the thrift charter permits attractive activities unavailable without the acquisition. In the case of a developer, it's a marriage of convenience and ready cash.

The acquisitions of thrifts by nonbanks and nonthrifts have come in spurts in the past three years. But as more companies want to add "financial services" to their corporate identities, the trend can be expected to continue.

Within the past 10 days, a manufactured home/mortgage banking organization based in Tulsa, Okla., an-

Torell Named CEO at CalFed

Rutland Resigns to Make Room for Hanover's Ex-Chief

By ROBERT LUKE
West Coast Bureau

John R. Torell

LOS ANGELES — John R. Torell 3d, former president of Manufacturers Hanover Corp., was elected chairman and chief executive officer of CalFed Inc., the nation's fourth largest thrift holding company.

As a result, George P. Rutland, 55, resigned as president and chief executive officer.

"I don't think the new chief executive should be in with the current chief executive around. That's not appropriate," Mr. Rutland said in an interview.

Mr. Torell, 49, succeeds Robert R. Dockson, who retired as chairman of the board but remains chairman of the board's executive committee. Mr. Torell assumes his posts on Aug. 1.

Mr. Rutland's departure was not unexpected. Reports had circulated for months that he would not be chosen to succeed Mr. Dockson, whose employment contract with the company expired at the company's annual stockholders meeting in April.

"If it was going to be Rutland, Dockson's retirement would have been an-

Banks Will Pay Overdraft Costs, Fed Official Hints

By YVETTE D. KANTROW

NEW YORK — The idea of making banks responsible for the payment system risk they create when using large-dollar transfer networks is gaining support at the Federal Reserve Board, Vice Chairman Manuel H. Johnson said Thursday.

"If risk responsibility can be clearly assigned, not only will markets allocate daylight credit more effectively, but the level of aggregate exposure will also decline," the vice chairman told a payment systems symposium in Williamsburg, Va.

At the same symposium, E. Gerald Corrigan, president of the Federal Re-

If Johnny the MBA Can Read, Why Can't He Write?

By JOYCE PHARRISS

NOT VERY LONG AGO the subject of many a news story was "why Johnny can't read." Although that theme seems to have lost its appeal, "why Johnny can't write" — a question more fitting for the careerist 1980s — has taken its place.

Johnny and his classmate Joanne have grown up and gone to business school. And guess what? Those kids with the high-priced MBAs can't write a readable report or memo once they get out there in the business world.

At least that's what a lot of people, including some from corporate America's executive suites, would have you believe. The sheer number of MBAs now out there makes it inevitable that some will indeed be poor writers, some excellent, many mediocre.

People holding MBA degrees — newly acquired or a decade old — are not more likely to write more or less coherently than other people in the business world with comparable levels of education — such as engineers, lawyers, or biochemists.

Many people complete years of schooling, including graduate-level studies at some of the most prestigious universities, without being obliged to write well. Writing skills are simply not emphasized in graduate education.

But these days resentment runs high when it turns out that MBAs from the top business schools can't communicate effectively. The competition to hire business school graduates is intense, and the salaries that companies pay to bring them on board can only be justified if they walk on water.

> Resentment runs high when it turns out that MBAs from the top business schools can't communicate effectively. The salaries companies pay to bring them on board can only be justified if they walk on water.

Yet this year's newly minted MBAs have the same problems in writing clearly that MBAs 10 years out of school and executives as a group have had for years. Grammar and spelling errors aren't the problem, either for executives or students in the MBA program at Stanford.

Deadly Dullness of Business Style

Most writing difficulties in both groups can be traced to three bad habits that create confusing business documents, waste time, and undermine goodwill: thinking aloud on paper, ignoring the reader's needs, and adopting the prevalent business style. Even a simple announcement of the office Christmas party, couched in the prevalent business style, reads like a proclamation from the great industrial potentate.

Thinking on your feet is unquestionably a valuable skill in business. It's almost always fatal when adapted to the written word. The executive who writes or dictates thoughts as they occur, hoping to wrap up that third-quarter production report in 10 minutes, will inevitably produce a report no one else can read — at least not without some second guessing.

Think clearly about the subject and how to organize it on paper. Make a rough draft and polish. These basic investments in time and effort are necessary to save your reader from being puzzled by your report. Other people's time saved is one measure of effective executive writing.

Yet you'll hear students in the MBA program at Stanford, as well as executives, insist: "I have too much to do. I don't have time to go through all that to get out a report."

Such an attitude assumes that your reader has little to do and plenty of time to figure out what your report is trying to say. The result is more misunderstandings and more of your own and your reader's time spent on clarifications and explanations. If time is money, as the cliche goes, you're costing your organization plenty through duplication of effort.

Ignoring the reader's needs is another costly executive writing error. Think about how you read the documents that cross your own desk.

Make the Facts Easy to Find

If you're like most busy people, you scan quickly, looking for answers to three unspoken questions: What is this about? What does it have to do with me? What should I do about it? Yet much of this basic information is often buried somewhere in the third paragraph, sometimes only implied. Much of the time it is omitted altogether.

A busy reader who can't get quickly to the information sought may devote more time and effort to unearthing it. Or the reader may just put your letter on the bottom of the pile. While you're waiting for a reaction and wondering why it's taking so long to get, a quarter-million-dollar project is on hold.

Basic information — what your letter is about, what it has to do with the reader, what needs to be done about it — should be highlighted so it can't be missed. State this information directly and specifically. Make it easy for your reader to get the information needed to ensure that you get the results you want from your writing. Getting results is a second measure of effective executive writing.

Executive writing problem No. 3 lies in the unconscious tendency of managers at every level to adopt the prevalent business style. As a result, much executive writing sounds dreadfully similar. It is stilted, overly formal, obscure, and inflated — whether the subject is the quarterly earnings report or a commendation to an employee for 25 years of faithful service.

The solution is fairly easy. Get back to writing in plain English. Write shorter sentences. Use active voice in most of them.

Avoid Rodomontade, Prolixities

Avoid jargon, big words, and wordiness. To name a few of the prolixities that plague business documents: "prior to" instead of "before;" "in the event that" instead of "if;" and "at the present time" instead of "now."

Get rid of legalese, such as "affix your signature to this document," "pursuant to our agreement," or "accede to your request." Use personal pronouns and contractions. Strive for a conversational tone.

A third measure of executive writing is how effectively it promotes goodwill. Business success depends on successful relationships among people.

The prevalent business style wastes the reader's time, being more difficult to understand than the subject matter warrants. At worst, it comes across as imperious and impersonal. Letting your own conversational voice be heard on paper is a much better strategy for winning friends and influencing people.

Why do young MBAs write in the prevalent business style? Probably for the same reasons as executives in general: They've simply adopted this aspect of the corporate culture just as they've adopted its dress code.

Students who take management writing workshops at Stanford Business School often resist the suggestion to write in a simpler, less formal style. After all, they've read executive memos at their previous places of employment before coming to business school.

At business school they've been inundated with academic readings full of jargon, polysyllabic vocabulary, passive verbs, and sentences running 40 to 60 words. With such role models, how many success-driven people are going to take a chance on looking dumb by writing in plain English?

If attention to writing is given short shrift by many of the new crop of MBAs, there may be other reasons. At business school, many students say, it's not worth the effort to spend time on writing because good writing isn't a criterion for success in most of their courses.

Once in business, these students believe, the emphasis will be on their ability to think on their feet, make smooth presentations, and deliver dynamic speeches. Stanford Business School workshops on how to make presentations consistently outdraw those on writing by more than 3-to-1.

Executives may indeed write less as they reach the ranks of general management. However, MBAs moving into entry-level management positions and through middle-management ranks will frequently be called on to write.

The Writing Is on the Wall

During the first few years of their careers, these managers may often be visible to top management only as names on proposals, reports, or memos. Depending on how well or poorly they come across on paper, their writing can be either a blessing or a curse.

The senior vice president of a large pharmaceutical company recently phoned the communication skills office at Stanford Business School to get some help for his newly appointed vice president of sales. The problem: He wrote proposals that the chief executive officer couldn't understand.

This writer sent directives to the field force that no one could follow. His memos to colleagues gave rise to conflicting interpretations. The effects were wasted time, lowered productivity, professional embarrassment, and damaged credibility.

The diagnosis: the three bugaboos of business writing described above. All the symptoms were easy to spot in a small collection of the sales vice president's documents.

Like this manager, anyone can change writing habits and produce more effective letters, memos, and reports with this three-pronged approach:

- **Attitude.** Recognize that certain ideas you may have about writing are unrealistic: "I shouldn't have to spend time on writing" or "It should be as easy as talking."

Other attitudes are untrue: "I can't change the way I write" or "It takes an innate talent I don't have." Such attitudes only encourage frustration and powerlessness.

Recognize that writing require an investment in time. By its very nature writing is more exacting than talking. It

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for space and clarity.

Remember, we need your views to be a true community newspaper.

Thrift Industry Continues to Shrink

By **THERESIA E. TREPEL**

NEW YORK

THE consolidation of the thrift industry that began in the early 1980s continued last year. The nation's top 300 thrifts held 62.7% of the industry's deposits on Dec. 31, up from 59.3% a year earlier and from 54.3% at yearend 1981.

The total number of thrifts fell by 6.1% in 1987. There were 3,467 federally insured institutions on Dec. 31, compared with 3,692 a year earlier and 4,110 at yearend 1981. That amounts to a 15.6% decline over a six-year period.

These are some of the findings of the *American Banker's* annual survey of the nation's thrift industry. The *American Banker* identifies and ranks the 300 largest savings and loan associations and savings banks in the nation by total deposits and assets as of Dec. 31. A geographical breakdown of the top 300 thrifts in deposits is also provided.

Henry Peltz, a vice president and thrift analyst with Keefe, Bruyette, & Woods Inc., cited two reasons for the concentration of deposits at the larger thrifts. "Big thrifts have money desks where they buy deposits," he said. "In addition, acquisitions of smaller thrifts by the top thrifts played a role."

The *American Banker* found that 26 of the top 300 thrifts in deposits acquired thrifts in 1987. The assets of these acquired institutions totaled $14.8 billion and accounted for 30% of the $49.4 billion growth in assets at the top 300 institutions last year.

The deposits of the top 300 thrifts rose 7.7% to $692.3 billion on Dec. 31, from $642.9 billion a year earlier. The total deposits for the entire industry were up 1.8% to $1.103 trillion from $1.083 trillion a year earlier.

Three hundred and twenty of the thrifts in the United States at yearend, or 9.2% of the total, were insured by the Federal Deposit Insurance Corp. The FDIC-insured thrifts had $170.9 billion in deposits, or 15.5% of the industry total. The remaining 3,147 thrifts, insured by the Federal Savings and Loan Insurance Corp., had deposits of $932.6 billion, or 84.5% of the industry's deposits.

Other Survey Findings

- The trend toward conversion from mutual to stock ownership continued for the fourth year in a row. Among the top 300 thrifts in deposits, 198, or 66%, were stock companies at yearend 1987, compared with 177 institutions, or 59%, a year earlier. At yearend 1983, only 32% were stock companies.

Thrifts have been converting from mutual ownership to stock ownership primarily to recover capital lost during hard times in the early 1980s. Mr. Peltz believes this trend will continue.

- Alabama Federal Savings and Loan Association, Birmingham, had the largest gain in deposits among the top 300 thrifts. Its deposits rose 120% from $651.4 million on June 30 to $1.43 billion on Dec. 31. The increase was attributed in part to the acquisition of the $935 million-asset First Financial Bank, New Orleans, and the $55 million-asset First Federal Savings Bank, Slidell, La.
- The second largest deposit gain was posted by the 78th-ranked Home Savings Association of Kansas City. The Missouri thrift's deposits doubled from $1.17 billion on June 30, to $2.34 billion on Dec. 31. The thrift acquired the $1.1 billion-asset Riverside Federal Savings Association, Pine Bluff, Ark., on Dec. 8.
- The thrift with the third largest deposit increase was 64th-ranked Guaranty Federal Savings and Loan Association, Galveston, Tex. Its deposits rose 41% to $2.62 billion at yearend. The gain was helped by its purchase of a branch office of Benjamin Franklin Savings Association, Houston, in July, and Guaranty Federal's acquisition of 14 branches of United Savings Association, Houston, in December.
- The largest decline in deposits was posted by 144th-ranked Far West Federal Bank, Portland, Ore. Its deposits dropped 40%, to $1.43 million at yearend from $2.38 billion at midyear. The thrift has been insolvent since yearend 1986.
- Lyons Savings, Hinsdale, Ill., had the second largest drop in deposits. The thrift was known as Lyons Federal Trust and Savings Bank until it was placed in the Federal Home Loan Bank Board's management consignment program in September. Lyons Savings had a 17% deposit loss, down to $1.28 billion on Dec. 31 from $1.54 billion on June 30. This decline was attributable to the thrift's large loan losses.

Citicorp Units with High Capital Ratios

- Two Citicorp affiliates were among the top 300 thrifts with the highest ratios of net worth to assets. Citicorp Savings of Illinois, Chicago, had a ratio of 30.88%, and Citicorp Savings of Florida, Miami, 19.34%. In addition, a third Citicorp thrift, Citicorp Savings, San Francisco, had the ninth highest capital ratio. These three Citicorp thrifts have ranked among the 10 thrifts with the best capital ratios for the past three years.
- A newcomer to the highest capital ratio list was Southern California Savings, Beverly Hills. Its ratio of 15.45% ranked fourth among the top 300 in deposits at yearend. In 1986, the thrift had the sixth poorest ratio among the top 300 thrifts, −16.24%. The turnaround was attributable to the Simon group's purchase of the thrift in spring 1987. At that time, the institution was recapitalized.
- The thrifts with the poorest capital ratios were Western Federal Savings and Loan Association, Dallas, and American Diversified Savings Bank, Lodi, Calif., at −150.88% and −116.21%, respectively. Western lost $885 million in 1987, the largest loss posted by a thrift. American Diversified lost more than $111 million, the 26th largest loss.
- The biggest merger last year was reported by fifth-ranked Glendale Federal Savings and Loan Association, Glendale, Calif. It acquired the $2.7 billion-asset Guarantee Savings, Fresno, Calif., on Oct. 30.
- The second largest merger was the acquisition of $1.5 billion-asset Central Savings and Loan Association, San Diego, by 11th-ranked Coast Savings and Loan Association, Los Angeles, on April 10, 1987.
- The third largest merger was posted by 52d-ranked Commercial Federal Savings and Loan Association, Omaha. It acquired the $1.4 billion-asset Empire Savings Building and Loan Association, Denver, on April 30.
- In a major consolidation, three members of the Empire Financial network — the $3.4 billion-asset Empire of America Savings Bank, Fort Worth; the $79.5 billion-asset Empire of America-Texas Federal Savings Bank, Houston; and the $409.8 billion-asset Empire of America-California Federal Savings Bank, Woodland Hills, were consolidated under the charter of 13th-ranked Empire of America Federal Savings Bank, Buffalo, on Dec. 31. ■

There Are Four Reasons Why Mortgage Lenders Rely on CPI:

1 Software Systems – Mainframe and micro-based systems that cover every aspect of residential mortgage lending and servicing.

2 Remote Data Processing – Timely mortgage data processing and comprehensive reports – the information you need to manage, when you need it.

3 Training and Consulting Services – Over 300 professionals with a single goal-effective and efficient service.

4 It all adds up to the lowest personnel costs per loan serviced in the industry. Four good reasons why you should rely on CPI.

CPI – Clearly The Leader

Top 300 Thrifts

In deposits and assets on Dec. 31, 1987

American Banker ranks the 300 largest savings and loan associations and savings banks in the nation by their total deposits and their total assets on Dec. 31, 1987. A geographical breakdown of the top 300 thrifts in deposits is also provided. Summary tables identify the fastest growing thrifts in deposits and the thrifts with the largest deposit losses over the last half of 1987. Additional summary tables identify the thrifts with the best and poorest net worth-to-assets ratios at yearend.

Data sources: Primary source is American Banker questionnaire sent to the 400 largest thrifts in the nation. For those thrifts not responding to the American Banker, data from the Federal Home Loan Bank Board and the Federal Deposit Insurance Corp. were used. These data were provided by **ADP Data Services Division, New York.** ADP has two thrift data bases for thrifts: (1) Its data base of thrifts reporting to the FHLBB on the "Quarterly Financial Report to the Federal Home Loan Bank Board." Virtually all of these thrifts are FSLIC-insured; (2) Its new data base of savings banks reporting to the FDIC on the quarterly "Consolidated Reports of Income and Condition for Savings Banks." All the institutions in this data base are FDIC-insured. **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Regulatory Net Worth** includes permanent, reserve, or guarantee stock; paid-in surplus; qualifying mutual capital certificates; income capital/net worth certificates; qualifying subordinated debentures; appraised equity capital; reserves; undivided profits; and net undistributed income. **Charter Types: 1**-Mutual Savings Bank; **2**-Stock Savings Bank; **3**-Mutual Savings & Loan Association; **4**- Stock Savings & Loan Association. **Insurance Types: 1**-FDIC-Insured; **2**-FSLIC-Insured; **3**-State Insured. **(a)**— Data are reported on a consolidated GAAP ("generally accepted accounting principles" basis. **(b)**— On Dec. 31, 1987, three members of the Empire Financial network—Empire of America Savings Bank, Fort Worth; Empire of America- Texas Federal Savings Bank, Houston; and Empire of America- California Federal Savings Bank, Woodland Hills, were consolidated under the Buffalo-charted savings bank. **(c)**— The 1986 data are unconsolidated and include the Buffalo-based institution only. **(†)**— Includes the effect of FSLIC granted forbearances.

Data sources: Primary source is American Banker questionnaire sent to the 400 largest thrifts in the nation. For those thrifts not responding to the American Banker, data from the Federal Home Loan Bank Board and the Federal Deposit Insurance Corp. were used. These data were provided by **ADP Data Services Division, New York.** ADP has two thrift data bases for thrifts: (1) its data base of thrifts reporting to the FHLBB on the "Quarterly Financial Report to the Federal Home Loan Bank Board." Virtually all of these thrifts are FSLIC-insured; (2) Its new data base of savings banks reporting to the FDIC on the quarterly "Consolidated Reports of Income and Condition for Savings Banks." All the institutions in this data base are FDIC-insured. **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Regulatory Net Worth** includes permanent, reserve, or guarantee stock; paid-in surplus; qualifying mutual capital certificates; income capital/net worth certificates; qualifying subordinated debentures; appraised equity capital; reserves; undivided profits; and net undistributed income. **Charter Types: 1**-Mutual Savings Bank; **2**-Stock Savings Bank; **3**-Mutual Savings & Loan Association; **4**- Stock Savings & Loan Association. **Insurance Types: 1**-FDIC-Insured; **2**-FSLIC-Insured; **3**-State Insured.

Data sources: Primary source is American Banker questionnaire sent to the 400 largest thrifts in the nation. For those thrifts not responding to the American Banker, data from the Federal Home Loan Bank Board and the Federal Deposit Insurance Corp. were used. These data were provided by **ADP Data Services Division, New York.** ADP has two thrift data bases for thrifts: (1) Its data base of thrifts reporting to the FHLBB on the "Quarterly Financial Report to the Federal Home Loan Bank Board." Virtually all of these thrifts are FSLIC-insured; (2) Its new data base of savings banks reporting to the FDIC on the quarterly "Consolidated Reports of Income and Condition for Savings Banks." All the institutions in this data base are FDIC-insured. **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Regulatory Net Worth** includes permanent, reserve, or guarantee stock; paid-in surplus; qualifying mutual capital certificates; income capital/net worth certificates; qualifying subordinated debentures; appraised equity capital; reserves; undivided profits; and net undistributed income. **Charter Types: 1**-Mutual Savings Bank; **2**-Stock Savings Bank; **3**-Mutual Savings & Loan Association; **4**- Stock Savings & Loan Association. **Insurance Types: 1**-FDIC-Insured; **2**-FSLIC-Insured; **3**-State Insured.

Worth Repeating

Your value to an organization is not your sameness, but your difference. That is what makes you unique as an individual.

C. James Maselko of the consulting firm Block, Petrella, Weisbord. [Page 2]

COMMENT

Bankers Dispute ABA

By SANFORD ROSE

The much-publicized American Bankers Association study of delivery system economics argues that "the U.S. banking industry faces a significant branch restructuring challenge that is not about to disappear, and most banks do not have the management tools needed to address the problem." Do bankers agree with the assessment of their trade association?

Based on a survey recently conducted by Oliver, Wyman & Company, one would have to conclude that they don't. The OW survey, which elicited responses from 36 large branch banking systems (the smallest bank had about $4 billion in assets, while the median bank had approximately $10 billion), reveals that bankers, by and large, do not feel their branches are in crisis.

An overwhelming majority of the respondents say that branch systems are critical to their strategic objectives — a sentiment with which neither the ABA nor Oliver, Wyman would disagree. However, the ABA study contends that fully 25% to 40% of all branches are

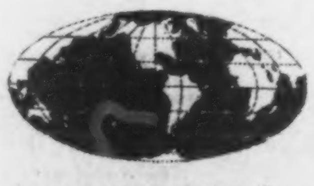
Japanese Test Global Market With Trust Bank Units in US

By JAMES R. KRAUS and ROBERT LUKE



International Briefing

NEW YORK — Japan's giant trust banks, once content to focus primarily on their national market, are now pushing aggressively into the global arena. Nowhere is this more evident than in the United States.

Recently, four of Japan's seven trust banks opened branches in New York — Yasuda Trust and Banking Co., Sumitomo Trust and Banking Co., Mitsubishi Trust and Banking Corp., and Mitsui Trust and Banking Co.

The trust banks are also expanding their geographic reach by opening representative offices. Yasuda, which has had a New York branch since 1977 and a Los Angeles agency since 1980, recently opened offices in Chicago and Atlanta.

"In the past, we've grown in an environment of distinctive national markets," said Fujio Takayama, president of Yasuda. "Now, we're dealing in a global market. Everyone recognizes this." He cited recent agreements to adopt common international capital-to-assets ratios as the best evidence.

International asset management, he said, is part of the growing diversification among Japanese trust banks, which in the postwar years served primarily to gather long-term deposits and channel them into capital investments.

U.S. League's Journal Takes FDIC to Task

Article Favors Creation Of New Federal Agency

By JIM McTAGUE
Washington Bureau

WASHINGTON — An official of the U.S. League of Savings Institutions advocates the creation of a federal agency modeled on the Depression-era Reconstruction Finance Corp. to help overhaul the deposit insurance system.

In an upcoming article, Dennis Jacobe, research director for the 3,200-member thrift organization, argues that both the insolvent Federal Savings and Loan Insurance Corp. and the Federal Deposit Insurance Corp. need a radical overhaul. Mr. Jacobe says a merger of the funds won't work.

The financial strength of the FDIC, which has $18.3 billion in funds, is illusory, he claims. Mr. Jacobe said, however, that the league itself has not taken an official position on the strength of the FDIC.

Treasury Under Secretary George D. Gould said Tuesday that savings institutions are capable of contributing more money to restore the FSLIC.

Outlays May Trigger Budget Cuts
Page 3

Mr. Jacobe's article is scheduled to appear in this month's issue of *Savings Institutions*, the U.S. League's official magazine. The article does not specify where the new agency would obtain cash for troubled banks and thrifts.

A related piece in the May issue debunked claims about the FDIC's

Operations Show Not Just for Vendors

By JEFFREY KUTLER and SUZANNE CHRISTY

THE AMERICAN BANKERS Association held its annual technology extravaganza in Atlanta last week. Among 3,500 people in attendance, bankers were outnumbered almost 2-to-1 by representatives of 230 companies selling everything from mainframe computers to artificial intelligence systems — and from used automated tellers to filing cabinets for checks.

It was the largest such show ever in U.S. banking, reflecting the industry's voracious appetite for many kinds of systems. A visitor could have spent the entire three days touring the vast exhibit hall, listening to sales pitches, and trying to understand how the latest in products and services might be of help to their operations back home.

But the exhibition, which occupied several acres of the Georgia World Congress Center, was only half the story of NOAC '88, the ABA's national operations and automation conference. Despite the exhibit hall's record size and attention-grabbing glitz, "conference" was still the operative word.

Presentations by speakers, along with the informal conversations in the hallways, vied with the exhibit floor for the attention of those who sought more sober discussions of the issues and controversies facing bank operations executives at a time of volatility and uncertainty.

Cause to Celebrate

THE GROWTH of the national operations and automation conference over the past 20 years attests to the prominence achieved by operations — and operations managers — in the banking hierarchy. Self-congratulation is in order wherever operations people gather.

TECHNOLOGY TODAY
AN AMERICAN BANKER WEEKLY FEATURE
Section Begins on Page 6

"Operations and technology are now recognized to be part of the heartbeat and fiber of everything a bank does," said Lois Martin, chairman of the ABA operations and automation division, in an interview just prior to the conference. She is also senior vice president of FBS Information Services, St. Paul, a subsidiary of First Bank System Inc.

"Operations is not just seen as a back-room function anymore," added Jerry McElhatton, vice chairman of the ABA operations division and managing director of First RepublicBank Corp., Dallas.

Ms. Martin, Mr. McElhatton, and other members of the ABA operations executive committee said they have gained respectability and are now routinely included in the upper decision-making echelons at their institutions. They also seem untroubled by the cost-cutting mentality that appears to be so rampant in the industry.

"Cost containment is not necessarily a major issue for the technology side of a bank. Our institutions draft business plans, and our job is to support those plans.

"In some instances, such as check processing, our goal is to be the low-cost producer because there is no great competitive advantage to be gained. On the other hand, we see branch automation as an opportunity, where significant investment is clearly justified," Ms. Martin said.

"There is more emphasis on business-case analysis," said Robert Seidell. He is chairman of the NOAC '88

Deregulation Urged By Japanese Banker

By CLAY NAFF

TOKYO — Kazuo Ibuki, the new president of the Federation of Bankers' Associations of Japan, said that the ministry of finance should push ahead with its plan to deregulate interest rates on small deposits by yearend.

However, he acknowledged that such action is unlikely. A federation spokesman later concurred, saying that negotiations among government agencies on this question have bogged down, and that deregulation may not take place until late next year or the following year.

Japanese commercial banks are worried about losing depositors to better-paying financial institutions following the April 1 abolition of tax-free accounts for small savers.

Mr. Ibuki, who is also president of Mitsubishi Bank, told a group of Japanese reporters that commercial banks should be permitted to offer market-rate certificates of deposit of 2 million to 3 million yen as an interim step.

Currently, interest rates on bank deposits up to 10 million yen are controlled at minimal rates ranging from 2.26% for deposits of a year or less to 3.64% for the maximum-allowed three-year fixed deposit.

Money market certificates at somewhat higher market rates are available for 10 million yen or more. Specialized banks can offer various low-cost deben-

Texas Finance Board Stalls Insurance Powers Plan

By RICHARD RINGER

The board of the Texas Finance Commission delayed a scheduled vote on a controversial proposal to give insurance powers to state-chartered banks.

The six-person board, made up of four bankers and two nonbankers appointed by the governor, decided instead last Friday to continue studying the proposal.

The board is tentatively scheduled to meet again on June 17, said Robert Huxel, director of governmental affairs for the Independent Insurance Agents of Texas. The group, which leads the opposition to the proposal, represents 2,500 insurance agencies with 15,000 employees.

The agenda for the tentatively scheduled meeting has not been issued, Mr. Huxel said.

The proposal, made last April by Texas Bank Commissioner Kenneth W. Littlefield, would authorize insurance powers through regulation, not by legislation.

Hubert Bell Jr., acting general counsel for the Texas Banking Department, said Texas law does not require specific legislative approval for banks to engage in some insurance activities.

The Texas Legislature did not convene this year. Its next regularly scheduled session begins in January 1989.

The proposal would enable state-chartered banks in Texas towns with fewer than 5,000 residents to act as insurance agents for any type of insurance product.

Federally chartered banks already have this authority. Moreover, a wildcard statute in the Texas law gives the "same rights and privileges" of federally chartered banks to state-chartered institutions, said Mr. Bell.

The proposal also would allow any state bank to sell insurance covering the collateral for any loan that the bank makes. Existing law, Mr. Bell said, empowers the board of the Texas Finance Commission to determine activities that are "incidental" to banking.

The proposal, if adopted, would provide an additional source of revenue for state-chartered banks. Texas banks have suffered serious losses in recent years because of the downturn in the energy industry and the subsequent collapse of real estate prices.

This year, as many as 11 state legislatures were expected to consider proposals giving insurance powers to banks. The authority for state banks to engage in the insurance business was the item most desired by banks, among the powers the legislatures were expected to consider this year, according to an *American Banker* roundup of state legislative initiatives, published in February. ■

Correction

The total deposits of Far West Federal Bank, Portland, Ore., fell 3.12% over the six-month period ended Dec. 31, 1987, from $1,473.5 million on June 30 to $1,427.5 million. Based on incorrect June data received for the thrift, Far West was erroneously given as the thrift with the largest deposit decline in a summary table to the listing of the top 300 thrifts, which appeared on page 18 in the May 27 *American Banker*. ■

FINANCIAL TECHNOLOGY UPDATE

The NCR 5571 Self-Service Information/Statement Terminal allows customers to obtain their own account statements and information without the assistance of branch personnel. Customers requesting interim statements and information concerning loans and money markets, for example, can now be offered another convenient automated service.

Advanced processing for branch automation. The Financial TOWER System 2 (FTS 2) from NCR is a state-of-the-art transaction processing system for branch automation. FTS 2 can provide a total solution in advanced hardware, software and communications in an open architecture designed to accommodate tomorrow's emerging technologies. The system also incorporates an advanced platform selling environment with sophisticated networking capabilities designed to provide customers with superior service.

Increased revenue and reduced labor costs are just two possible benefits of the Return Item System (RIS) from NCR. This system allows financial institutions to further automate manual procedures in return item processing. Now a single workstation can be put to more than one use, from MICR proof to return item applications.

First Independent Bank of Vancouver, Washington was one of the first and largest banks in the country to implement NCR's new Banker 80-II System. Their reasons were threefold: a) the cost was similar to that of their service bureau, b) they preferred in-house control over their own applications and operations, and c) their existing staff could be trained to operate the system, eliminating the need to hire highly-skilled personnel.

For additional information on these new developments from NCR, phone 1-800-CALL NCR.

NCR

➤➤ Continued from Page 1

currently unprofitable because of overbranching, mounting labor costs, a shift to higher-cost deposits, and the post-1981 decline in interest rates, which has reduced the earnings credit for branch-gathered funds.

The respondents to the OW survey are decidedly less negative. They maintain that only 8% (mean percentage) to 9% (median percentage) of their branches were unprofitable in 1987.

Few Are Intractable

What's more, they argue that virtually all their currently unprofitable outlets can be restored to profitability by management action within one to two years. On average, only 2% to 4% of branches are considered intractably unprofitable and therefore candidates for closure.

In point of fact, the respondent banks are not in a branch-closing mood. Although some branches will undoubtedly be shuttered, on net, the surveyed institutions expect to have more branches in operation in the next couple of years than they now have — an average of about 6% more.

Why the discrepancy between the ABA numbers and those derived from this survey of large banks? Are the respondents guilty of a certain measure of unrealism? Quite possibly this might be the case.

Oliver, Wyman notes that the evaluation of branch performance at the surveyed banks tends not to be especially rigorous and therefore probably misrepresents the relative contribution of some branches versus others.

Only about half of the respondents measure the performance of branches individually. And of those that look at individual performance, more than three quarters evaluate that performance in relation to what are described as goals and targets (probably growth targets) rather than according to harder, more objective profit criteria — e.g., return on assets, deposits, or imputed equity.

Significantly, those banks that employ the more objective profit criteria report that the number of their unprofitable branches is some 50% greater than at banks that don't have hard branch profitability data.

Telltale Omissions

Asked to list the most common reasons for branch unprofitability, the respondents cite poor location and neighborhood demographics as the primary cause and excess overhead allocations as the second reason. Relatively few mention bad management, still fewer cite in-branch inefficiency, and rather shockingly, none mentions poor product pricing as a contributor to unprofitable operations.

Oliver, Wyman considers these responses to be a tad bizarre. In the view of Bill Wyman, its managing partner, location is undoubtedly the primary driver of branch profitability since it determines deposit volume per branch, which has a huge influence on unit costs. Good location also is an important determinant of superior mix — the ability to offer the more profitable products to the more profitable sets of customers.

But while the right location provides the potential for profitable operations, whether that potential is actually realized depends rather heavily on appropriate product marketing and origination, product pricing, and branch efficiency — variables that are either slighted or totally ignored by the respondents.

For example, OW has found that the level of efficiency differences (on a range of specific measures such as expense per transaction) among branches in the same system is routinely over two to one. That is, something that costs $1 per unit in branch A can cost more than $2 per unit in branch B for no discernible reason except that it hasn't been monitored and managed.

By identifying the best-performing branches in a given system and upgrading the poorer performers to the standards of the well-run outlets, the consulting firm has been able to realize significant economies — saving, for some client banks, as much as 20% to 25% of direct branch costs.

Similarly, although none of the respondents identified product pricing as a cause of branch unprofitability, OW believes that considerable gains can be achieved via a more rational approach to pricing. In one instance, the consultant had a client reprice its losing demand deposit accounts — account sizes in the range of between $1,000 and $2,000 — by simply raising the cutoff for the waiver of fees to the level where the earnings credit paid for the account. As a result, the bank was able to increase branch net income by as much as 22%.

Misplaced Emphasis

While downplaying some very important reasons for unsatisfactory branch performance, the respondents emphasize one factor whose significance is rather dubious. As noted, the second most quoted reason for lack of profitability is excessive corporate allocations. But OW ventures the opinion that corporate overhead allocations are the *least* important factor in retail profitability. Typically only 10% or less of retail noninterest expense, indirect overhead, in OW's view, is only minimally displaceable and marginally controllable.

The nature of the responses to this survey suggests one large generalization: Executive management doesn't yet have reliable information on branch systems, and the lack of adequate profitability data, says Stuart Williams, an OW partner, continues to obscure major opportunities to rationalize and improve retail banking.

Fortunately, the great majority of major banks are currently building management information systems. As these systems come on stream, bankers will be better able to identify which branches are unprofitable and why.

Salvageable Losers

Oliver, Wyman agrees with the ABA estimate that branches with deposit levels of less than around $20 million to $25 million tend to lose money, if profitability is appropriately measured. However, it argues that this need not be so.

If branches are designed for specific markets and are operated more efficiently than they are now operated, the minimum size for breakeven, even in today's interest rate environment, is estimated to be only between $10 million and $15 million. Therefore, concludes the New York consultant, the proportion of all branches that will eventually have to be closed is surprisingly low, almost certainly less than 10%.

It may be that the respondents to the OW study, while overoptimistic about the current health of many of their branch outlets, are not too far off the mark in their estimate of the number of required branch closings.

Many of today's money losers are probably salvageable — an opinion shared, incidentally, by the author of the ABA study, Booz-Allen & Hamilton, which argues that branch closings are, in any case, a last and most unsatisfactory expedient. However, lacking the necessary data, the respondent banks at present seem to greatly underestimate the magnitude of their task.■

LETTERS TO THE EDITOR

Direct Deposit Plan May Hinder Benefit Recipients

To the Editor:

I would like to comment on the *American Banker's* May 20 article titled "Social Security, Treasury Simplify Direct Deposits" [page 15].

While the Social Security Administration's Presumed Direct Deposit program will probably provide the anticipated "sizable boost to direct deposits," I believe that it will be at the expense of many benefit recipients — specifically, those beneficiaries whose payment record contains an error in either their account number or type of account.

The Social Security Administration has never supplied receiving banks with "prenotes" which are required of all private-sector direct deposit originators.

The receiving bank is required to verify the integrity of the information contained in the prenotification (account number and account type) and to notify the originator in case of an error.

This procedure enhances the acceptability and salability of direct deposit by reducing the number of potential errors. Social Security has instead required a benefit recipient to sign an authorization form that then had to be countersigned by the receiving bank.

The receiving bank had the chance to verify and correct the deposit account number and account type.

An error rate of 10% to 20% in completing this form by customers is not unusual! The use of this form is now being eliminated along with the chance for verification at the receiving bank.

The receiving bank will now receive a payment on the 3d of the month with no advance notice, no advance verification or opportunity for correction, and complete liability if the post is to the wrong account in good faith effort to identify and accommodate a customer.

The net result is going to be an increased number of rejects and returns to the Social Security Administration. While I applaud and wholeheartedly support the effort to increase the number of direct deposits, I am discouraged that the Presumed Direct Deposit program does not provide the receiving banks with any opportunity for verification. While 80% to 90% of the participants in the program will have saved "a separate trip to their financial institutions to get special forms," the remainder may see their direct deposit being returned to the Social Security Administration as an unposted item.

Worth Repeating

For now we've decided to keep our bank charter and beat the competitors at their own game.

Robert R. Douglass, a Chase Manhattan vice chairman. [Page 1]

Chase Backs Off Threat to Drop Bank Charter

By JED HOROWITZ

NEW YORK — Chase Manhattan Corp. has retreated from its threat to give up its banking charter and membership in the Federal Reserve System, senior banking officials said.

"Only last year we looked at turning in our bank charter," Robert R. Douglass, a Chase vice chairman, said Wednesday. "For now we've decided to keep our bank charter and beat the competitors at their own game."

Mr. Douglass thus confirmed remarks made recently by Chase President Thomas G. LaBrecque, who had publicly challenged the Fed to drop its regulatory shackles or watch banks drop their charters. Mr. LaBrecque discussed the issue in a speech at the Federal Reserve Bank of Chicago last month.

"We prefer to remain a bank, and . . . at least in the near term we will," Mr. LaBrecque said. Chase has been spared the radical step of dropping its charter, he said, by a general recognition that Glass-Steagall Act restrictions on bank's securities activities must fall.

Mr. LaBrecque also said his bank's top priority has switched from winning new powers to building its capital. "Even if we had decided already to give up our charter, we wouldn't go ahead and do so without building a stronger capital position first," he said.

Finally, he noted, Chase last year reorganized its core banking activities, which has resulted in improved corporate finance and investment banking income despite regulatory restrictions.

Chase's threat to drop its charter and Fed membership was widely viewed as mere saber rattling to force the Fed's hand. Analysts have noted that Chase is

Fed Proposes Restrictive Rules To Curb Limited-Service Banks

Regulations to Affect 55 Grandfathered Institutions

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Moving to implement a law passed by Congress last summer, the Federal Reserve Board on Wednesday formally proposed rules restricting the growth and activities of the 55 limited-service institutions grandfathered under the legislation.

While the Federal Reserve Board voted unanimously to seek public comment on the proposals, some members complained that the restrictions were more onerous than required by Congress.

The proposals outline permissible methods for calculating a limited-service bank's asset growth, curbs on diversification, prohibitions on cross-marketing among affiliates, and caps on an affiliate's overdrafts. Comments will be accepted for 45 days.

Table on Page 14

The Fed was required to specify rules affecting so-called nonbank banks by the Competitive Equality Banking Act, passed last August. The legislation

Tighter Credit Union Rules Mulled

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Federal regulators are expected today to propose controversial rule changes that would mean tighter controls over some credit union mergers and other efforts by credit unions to expand.

The proposals, to be considered by the National Credit Union Administration at a board meeting in Grand Rapids, Mich., include one to bring a tougher review process to the chartering of "associational" credit unions that draw members from across the country. This proposal stems largely from concerns raised by the recent start-up of a credit union for the 28 million-member American Association of Retired Persons, which will draw business nationwide.

The NCUA is also expected today to propose eliminating previous plans to let well-run credit unions open their businesses to occupation groups of 300 or less without getting agency approval.

Other proposals, though, would facilitate some forms of expansion. Among the chief aims of the nine proposals is to bring more uniformity to decisions involving charters and mergers handled by regional offices of the NCUA.

But observers say that the proposals

Tunnel Vision Offers Fresh Marketing Perspective

By BARRY I. DEUTSCH

The future of marketing research lies in its practitioners' dexterity with the world under the microscope, not the one beyond the rainbow.

— Barry I. Deutsch
Executive Vice President
BankAtlantic

I DON'T KNOW why tunnel vision has gotten such a bad reputation. If you think about it, more of mankind's progress has come from those who squint down the tubes of microscopes than from those who stand in broad meadows scanning the horizon and admiring the trees.

I came to that conclusion while preparing to complete an assignment given me by a program committee, which wanted me to discuss the future of marketing research. I concluded that the future of marketing research lies in its practitioners' dexterity with the world under the microscope, not the one beyond the rainbow.

Many of banking's pundits, including some of those who share this space on Thursdays, talk a great deal about two topics: the importance of customer service and the future consolidation of the financial services industry. In a very real sense the two issues are linked and the providers of marketing research can help with both.

Platform automation means many things to many people. To the operations analyst it means less time at the desk per customer, which somehow translates into needing fewer platform officers. They're wrong about that. To the keeper of the central file it means reduced paperwork and more efficient data entry. That's probably right.

On one level of marketing thought it means more efficient selling because of the ability to put information on a screen to aid conversation. That's important, valuable, and only ignored here because its not relevant to the point of this essay.

Although we're declaring information provided to the seller not relevant, let's discuss the information gathered about the buyer. It has vast potential.

The use of the computer permits us to know more about the would-be customer facing our platform officer and allows us an easy, convenient, unobtrusive method to record what we've learned.

The challenge is to collect, analyze, and report on relevant data. Age profiles, the geographic draw area of the branch system, deposit range brackets, and multiple service usage are all headings for reports that are invaluable to marketing planners. Any data expert can scoop all of that up and most will proceed to lose it among the bits and bytes. It takes an information expert to reassemble it and make it meaningful.

The interactive power available through platform automation is such that we can also collect and record information that we don't even need to keep forever, but that once collected and reviewed will give us more grist for the marketing decision mill.

Where else does the customer have funds on deposit — banks, thrifts, brokerage companies? What triggered this visit — an advertisement, a referral, a sign in the branch, a comment by a teller? What other financial services is this customer currently contemplating? Did he or she ask about loan rates, mortgage refinancing packages, the availability of automated teller machines? Or did the customer offer information on similar services and prices at other banks?

What does all of this have to do with customer service? I'm not entirely sure that we know what we mean when we talk about customer service. On one level it's easy to define. You teach the front-line people to stand up, say hello, call the customer by name, answer fast, answer right. But might there not be a whole different definition — one that has to do with listening carefully to the customer, responding intelligently, and offering useful information?

What if you could research your services against those of your most significant competitors? What if you found the areas of most favorable comparison? And what if you set up hot keys on your platform computers so that if a customer happens to mention that they bank at First Farmers and Granary, for example, you could hit a key and trigger a statement like, "Did you know that our certificate of deposit rates have been higher than First F and G's in 32 of the last 37 weeks? Shouldn't you bank with us?"

What if you could send out a personalized letter two days later saying something like: "When you visited our bank the other day you mentioned that you were considering the possibility of refinancing your mortgage. Based on a recent estimate of house values in your neighborhood, I have taken the liberty of working out a quick estimate of what the costs would be if you borrow from us. I'll phone you in a few days to see if you have any questions or if we can be of any further help to you."

What does all of this have to do with survival and consolidation?

It is generally accepted by experts in marketing that closeness to the customer is a key ingredient to success. My view is that the banks that can figure out a way to benefit from the unchallenged cost advantages of automation and at the same time not lose their inherent closeness with the customer are the ones most likely to succeed.

The community bank is ideally positioned to pull this off. They are less likely to go overboard in pursuit of the biggest iron and the most elaborate software. Branch management is often extremely influential in the organization; as a result the bank is more inclined to make the system work for the front line than to force customer-unfriendly changes in order to please the data processors.

If it works the way it's supposed to, those who get and keep customers more effectively than others are more likely to be more profitable, command more respect in the market and, therefore, call their own shots.

What does all of this have to do with market research? That is where we have to turn to get this done. It's easy to stand on the edge of the meadow and listen to the sound of a tree falling in an empty forest and think great thoughts and conceive of how it ought to be. And it's easier still to stay home and say why it won't work — the finance guys will say how expensive it will be, and the lawyers how illegal, and the auditors how risky.

But it takes a lover of information and an admirer of the power inherent in knowledge to stay at the microscope and find the universe where random facts are turned into marketing triumphs. That, dear program committee, should be the future of marketing research. ■

Mr. Deutsch is executive vice president of BankAtlantic, Fort Lauderdale, Fla., a federal savings bank.

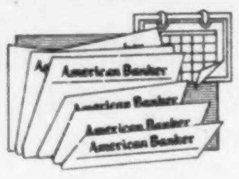
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- Former President Herbert Hoover warned that the low level of savings in the United States threatened the nation's living standards. In a letter to Sen. Henry Cabot Lodge, R-Mass., Mr. Hoover wrote that "important structural changes" in the federal government were necessary for efficiency and economy.

20 Years Ago

- John E. Horne, chairman of the Federal Home Loan Bank Board, said he would consider reducing liquidity requirements for federal savings and loan associations in an effort to stimulate the mortgage market.
- The Justice Department for the first time set out tough guidelines it would apply in judging mergers, but said the rules would not be applied as rigidly to banking as to nonregulated industries. An antitrust division spokesman said the guidelines were for "wholly unregulated industries clearly subject to a full application of the antitrust laws." The guidelines made clear, however, that mergers between banks in the same community would continue to meet resistance.
- The Justice Department filed separate antitrust suits against mergers proposed by the two largest banks in Mississippi. The department contended that acquisition of the $22.2 million-deposit City Bank and Trust Co., Natchez, by Deposit Guaranty National Bank, Jackson, the state's largest bank, with $339.3 million in deposits, and acquisition of the $26.5 million-deposit Bank of Greenwood by First National Bank, Jackson, a $288 million-deposit bank, would violate the Clayton Antitrust Act.

10 Years Ago

- The prime rate rose to 8½% at virtually all U.S. banks with deposits of $4 million or more. The change came after the $18.4 billion-deposit Continental Illinois National Bank and Trust Company of Chicago raised its prime.

5 Years Ago

- Merrill Lynch & Co. and Aetna Life and Casualty Co.'s Federated Investors Inc. subsidiary each applied to form New Jersey state-chartered banks not under the jurisdiction of the Federal Reserve System. The firms sought to take advantage of a loophole in banking law that defines a bank as an institution that accepts demand deposits and makes commercial loans.

1 Year Ago

- President Reagan announced he would nominate Alan Greenspan to replace Paul A. Volcker as chairman of the Federal Reserve Board. Mr. Volcker's decision to reject a third term at the Fed stunned finance markets, but the shock was cushioned by the decision to nominate Mr. Greenspan, a former White House economic adviser.
- Bankers Trust New York Corp., Chemical New York Corp., Manufacturers Hanover Corp., and J.P. Morgan & Co. said they would apply to open brokerage firms in Japan following the announcement by Japan's ministry of finance that 10 foreign institutions would be invited to do so. Banking officials said the invitations were tantamount to approval from the Japanese government. Each applicant took a nonbanking partner to comply with Japanese regulations prohibiting banks from controlling more than 50% of a securities company. Bankers Trust joined with Exxon Corp.; Morgan with Bechtel Investments Inc.; Chemical with Lord Howard de Walden, a private British investor; and Manufacturers with Chrysler Corp.
- The Federal Deposit Insurance Corp. announced that thrifts seeking to join the insurance fund would have to meet its 6% minimum capital requirement — or, more likely, a higher one — to convert.
- Computer Associates International Inc. and Uccel Corp. announced they would merge to form the nation's biggest independent software vendor.

— Domenica Trevor

Fed Proposes Restrictive Rules To Curb Limited-Service Banks

Continued from Page 1

outlawed nonbank banks but permitted those in existence as of March 5, 1987, to continue operating as long as they agreed to certain limitations.

Fed Chairman Alan Greenspan said the board had little flexibility in implementing the dictates of Congress. "The legislation may be wrong or inappropriate, but that's what it says," Mr. Greenspan said.

But the narrow interpretation by the Fed's staff distressed some of the board's governors.

"Clearly, Congress intended to be much more generic than you've got defined here," Federal Reserve Vice Chairman Manuel H. Johnson said at the board's open meeting.

Gilbert T. Schwartz, a former Fed lawyer who is now a partner with Skadden, Arps, Slate, Meagher & Flom, was encouraged by the governors' response.

"The vice chairman was right on target," he said. "There's very little need in terms of the statute's intent to take such a narrow view."

Limited-service banks, which accept demand deposits or make commercial loans — but do not do both — sprang up in the early 1980s as a way to circumvent laws restricting geographic expansion and bank ownership by commercial firms. Between 150 and 200 so-called nonbank banks were chartered, but many of these are industrial banks or trust companies not subject to the Competitive Equality Banking Act.

Congress capped the asset growth of grandfathered limited-service banks at 7% in any 12-month period, beginning Aug. 10, 1989.

The Fed is proposing two ways to calculate an institution's asset base, which would be used to determine permissible growth. An institution can choose to use its actual total assets on Aug. 10, 1988, or — to avoid reporting a figure that falls in the middle of a quarter — the limited-service bank can report its average total assets as of third-quarter 1988.

Congress also said limited-service banks may not expand their activities beyond those being conducted as of March 5, 1987. The Fed's plan divides activities into five categories: deposit taking, lending, trust services; clearing and payment services, and general nonbanking activites.

Not only are limited-service banks barred from branching out to new categories of activities, but the Fed devised subcategories to impose further limits on expansion. For example, if a limited-service bank was accepting demand deposits but not savings accounts as of the March 1987 deadline, then that institution may never offer its customers savings accounts.

Limited-service banks with credit card operations by the deadline can continue that service, but may not start a new type of consumer loan such as a home equity loan. Likewise, an institution involved in transaction services for consumers will not be allowed to expand by handling transaction services for business accounts.

All nonbanking activities such as data processing and investment advice are treated as separate activities under the proposal. They may therefore not be conducted by a limited-service bank unless begun before March 5, 1987.

The proposed rules also clamp down on cross-marketing. Basically, whatever cross-marketing limited-service bank affiliates were engaged in on March 5, 1987, is permissible. Anything else is not.

If a limited-service bank's car loans were being promoted by an affiliate on the deadline, then that could continue. However, that affiliate could not market the bank's deposit account or trust services.

The proposal aims to prohibit radio advertising if the companies were using only direct mail marketing as of the deadline. The Fed's Mr. Johnson was particularly irked by this provision, complaining that the Fed staff is being too meticulous and that medium of advertising does not matter. Staff members disagreed; they did explain that any cross-marketing being done by affiliates a year before the March 5, 1987, cutoff date would be acceptable.

Congress prohibited limited-service banks from incurring overdrafts with Federal Reserve Banks. Affiliates are also banned from having overdrafts at their parent limited-service banks. One exemption to this restriction is a secured overdraft by or on behalf of primary dealers affiliated with a limited-service bank. ■

Borrowing Up on International Markets

Continued from Page 3

fered rate — a new low.

Some corporate borrowers have been able to obtain single digit margins above Libor and in a few instances loans were priced with no spread at all above the interbank rate. The agency's report said that the light volume of financing with maturities of 10 years or more may reflect the reluctance of banks to accept such tight margins for long periods.

The strong demand for bank financing is expected to continue, however. "There are no signs of a letup in demand for funds on the syndicated credit market which, in the face of the difficulties experienced by the Eurobond market, has become the primary source of international long-term finance for corporate borrowers," the OECD said.

In the Eurobond market, the volume of new issues in the first quarter amounted to $54 billion, down slightly from the first quarter of 1987 but more than double the amount in the fourth quarter of last year. Among market sectors, equity-rated bonds — which all but disappeared after the crash — have bounced back strongly this year with $6.4 billion in new issues coming to market.

Equity-related bonds, those tied in some way to a company's stock price, have been issued primarily by Japanese corporations and have come back into favor as the Tokyo stock market has risen strongly.

The future of the Eurobond market remains clouded, however, the report said.

Although the market has rebounded strongly in 1988, "events have shown that large shifts away from Eurobonds in a general way may suddenly take place when a major currency such as the dollar comes under intense pressures," the OECD said.

Several positive factors, however, have helped general conditions in the Eurobond to improve since last year, the report said. The credit quality of borrowers has improved, and a strengthening swap market has created arbitrage opportunities for many borrowers. In addition, better pricing and liquidity for new issues has helped to restore investor confidence.

"If progress on this score can be sustained," the OECD said, "the stage would be set for a return of the market to its primordial function as a reliable source of long-term funding and an attractive outlet for international portfolio investment." ■

Citicorp's Tactics Stir Mortgage Market

By PHIL ROOSEVELT

NEW YORK — Robert D. Horner, the chairman of Citicorp Mortgage Inc., took the podium at a recent mortgage banking conference and asked the many Citicorp employees present to stand.

"Take a look at them," he told the audience. "The thing I want you to notice is that none of them have tails or horns, contrary to popular opinion around the halls today. . . . And they don't eat their young either."

Citicorp may not be evil incarnate, but it is indeed the object of growing scorn in the mortgage industry. Already the nation's largest mortgage lender, Citicorp wants to get even bigger — and its method of doing so is causing a full-blown industry uproar.

The method is MortgagePower, a marketing link to the customers of real estate brokers. Critics say that MortgagePower is unsavory and unfair, involving indirect "kickbacks" from Citicorp to participating brokers. Yet, armed with informal government approval, Citicorp has begun deploying the program in 38 states, mostly since 1986.

The long-simmering issue heated up in recent months as rising interest rates left lenders competing for fewer and fewer mortgage customers. And it reached a boil on May 16, when the U.S. Department of Housing and Urban Development proposed a regulation that would formally sanction MortgagePower and allow other lenders to copy its most controversial feature.

The Mortgage Bankers Association of America, fearing what some members call "Son of MortgagePower" programs, already has taken a stand against the key portion of the proposal. So has the powerful U.S. League of Savings Institutions. Meanwhile, the National Council of Savings Institutions, citing potential disagreement among its members, has assembled a 10-member task force to scrutinize the issue.

Ultimately, executives and analysts say, the proposal could transform the way mortgages are originated, plac

Home Lenders Battle for Business

By LINDA ELLIS

NEW YORK — Competition for mortgage originations has become fierce as lenders worry that the expected rise in interest rates will cut demand.

Savings institutions, battling with mortgage companies for market share, are lowering requirements for down payments, cutting closing costs, increasing advertising budgets, and sending loan officers into the community armed with a hard-sell message.

"We believe, based on a survey of our members, that 30-year fixed-rate mortgages will rise to about 11.25% by yearend," said Lyle E. Gramley, chief economist for the Mortgage Bankers Assocation. "If they do, we're expecting that mortgage lending activity will fall by about 25%, to $340 billion" as consumers postpone buying homes or refinancing.

Earlier this week, the average for the benchmark 30-year fixed-rate was 10.57%. Some analysts expect this mortgage to rise to 12% by yearend. Mortgages with adjustable rates have not risen as fast as those with fixed rates in recent months.

Both predictions compare with rates of 9.9% in March and 10.2% in early May. Interest rates were edging up before the major banks decided on May 12 to raise the prime rate to 9% from 8.5%. That move confirmed the trend.

"Even without rates moving up, this is a tough mortgage market," said Peter E. Knight, vice president of mortgage finance at the National Council of

New Proposals Open Doors for Insurer-Lender Referral Deals

By STUART A. FELDSTEIN

THE DEPARTMENT of Housing and Urban Development is moving toward a more liberal view of the Real Estate Settlement Procedures Act of 1974. This worries some mortgage lenders, but others are taking advantage of the likely change by securing new sources of referral-type business and income.

Home owners' insurance now may become the next ancillary business to which many lenders will turn — and in the process earn major new profits.

HUD's newest proposal would allow arrangements in which third parties, such as realty brokers and mortgage brokers, charge the consumer a fee for helping bring the lender and borrower together.

In response to this proposal, mortgage players are considering whether to emulate Citicorp and its Mortgage Power program, the one national program that really relies on realty firms to refer business and allows them to charge the consumer for doing so.

If the act allows payments for some referral services that surround a mortgage, then Mortgage Power is only one manifestation of many new opportunities. When a realty broker refers a customer to a lender, it boosts the lender's production volume. But when a lender refers its customer to a home owners' insurance company, it can make each customer more profitable.

Metropolitan Life Insurance Co. already has made headway in originating home owners' policies to its Century 21 subsidiary home buyers. Sears, Roebuck and Co. and its Allstate unit are now experimenting with sales of insurance to home buyers at their affiliated realty firm, Coldwell Banker. Both of these companies also are huge first-mortgage originators.

Insurer-Lender Teams

Meanwhile, two other insurers — American Security Group and American Loyalty Insurance Co. — have teamed up to offer home owners' policies through agreements with mortgage lenders of all stripes. Eight major lenders are already participating. The most advanced of them — Commonwealth Mortgage of Houston — says it believes its commission income in this program will soon reach $1 million per year. The profit margins are very fat indeed.

In this venture, the lender asks applicants if he may pass along information about them to an insurer. The insurer then makes the home owners' policy sales call. In return for the "information service," the lender receives a commission on closed policy sales.

Commission amounts depend on the degree to which the lender offers the information completely in all his offices, on other miscellaneous services that the lender may or may not perform, and, of course, on the size of the policy. Although the commission varies, an executive at American Security suggests that this payment may be enough to boost the lender's typical profit on a year of servicing on a typical loan by an additional 15% to 20%.

The commission is paid on new policies and also on annual renewals. The renewal rate on home owners' policies is extremely high. Thus, programs like this one provide the lender with new production income and also build assets by providing a future stream of likely renewal commissions.

As long as the consumer knows that he is merely agreeing to hear a sales pitch from an insurer, without obligation, our firm sees nothing ethically wrong here. For the borrower, it's a convenience. And, if the lender is going to take the time to explain the program and produce the needed information, he deserves to be paid. Sales leads are big business (as companies such as Dun & Bradstreet demonstrate in spades), and there is no reason that financial institutions should be barred from participating.

Aside from the Real Estate Settlement Procedures Act, other regulations may be involved. One is the prohibition against commercial banks and their subsidiaries participating in selling any insurance other than credit insurance on loans issued by the bank. There may or may not be some room within this regulation for commercial banks to participate. Lenders with questions should consult their legal staffs or those of interested insurance partners.

Regardless of the regulations, however, one thing is crystal clear: The insurance business in recent years has been very profitable for financial institutions, even under the commercial bank limitations.

In a new SMR study called "Beyond Banking," our firm obtained and evaluated 1987 profit data for both insurance underwriting and nonbank insurance agency subsidiaries of 285 leading U.S. bank holding companies. These units sell only credit-related insurance. Of the 285 holding companies, 78 had insurance agency subsidiaries, and they had a combined after-tax return on sales of 17.76% — an impressive figure. Meanwhile, 104 holding companies owned insurance underwriting subsidiaries. Those units earned a whopping combined 26.56% return on sales after taxes.

We suspect that margins on commission income from home owners' policies would be even higher. And, intriguingly, if one can provide sales information services for cross-selling home owners' policies, there are probably many other new opportunities for lenders as well — with insurance partners and others, too. ■

When a realty broker refers a customer to a lender, it boosts the lender's production volume. But when a lender refers its customer to a home owners' insurance company, it can make each customer more profitable.

LETTERS TO THE EDITOR

Credit Unions' Threat to Banks Is Exaggerated

To the Editor:

The May 10 article "Credit Unions Make Inroads into Bank, S&L Markets" [page 2], by James R. Kraus, provided welcome coverage of the growth of the credit union movement and the enthusiasm of credit union members for this cooperative model of financial service provision. However, I thought that the article was misleading in both its title and its emphasis on the largest credit unions.

In particular, the article failed to adequately describe the small scale of the credit union industry overall and the small size of most credit unions. It alsoneglected to discuss the role of community development credit unions in serving low-income members and communities.

I believe that a better understanding of the credit union industry is important for bankers to understand that, in most cases, credit unions not only are not competitors, but serve different markets and can be partners in providing banking services.

Credit unions derive from a long tradition of financial cooperatives which have grown up to help working people pool their funds to enable the purchase of homes and the safekeeping and growth of savings. Building societies were another example of such cooperatives, and they formed the basis of the separate savings and loan industry.

As recent deregulation has blurred the distinction between commercial banks and savings and loans, as banks and savings and loan associations have closed branches in many modest-income communities, and as deregulation has led to increased fees and charges for financial service products, there has been a renewed interest in credit unions as a source of affordable financial services for low- and moderate-income Americans.

In spite of this renewed interest, most credit unions remain small in size. While a few credit unions have millions in assets, full staffs, and offer a full range of financial services, most credit unions remain small in size, have the active participation of their members in decision-making, are heavily dependent upon volunteer staff members, and offer simple and inexpensive loan and savings products.

As your article points out, the combined assets of all the credit unions in the country fall well below those of Citicorp alone, and most credit unions themselves are small. In fact, 20% of all credit unions had assets of under $250,000 in 1985, while only 6% had assets of over $25 million, and only 16 credit unions in the entire country had assets over $500 million.

Community development credit unions, a small subset of credit unions, are chartered specifically to serve the needs of low-income members and communities. Of the 17,255 credit unions, only about 400 are community development credit unions.

Woodstock Institute is currently working with two community development credit unions which serve low-income Chicago neighborhoods. The first, the Austin-West Garfield Federal Credit Union, was recently opened on the city's west side. It was chartered to serve a neighborhood where banks and savings and loans had effectively pulled out.

Like many other community development credit unions, it is not competing with banks and savings and loans, but with expensive check-cashing services and finance companies. The North Side Federal Community Credit Union, which serves Chicago's Uptown neighborhood, has been operating for almost 15 years.

Over half of its savings account balances are less than $500, and the majority of its loan requests are for loans of less than $1,000. Both of these credit unions make the small loans and take the small deposits which are not always welcomed by commercial banks and savings and loans.

Recent Woodstock Institute work has shown that banks can be encouraged to view credit unions as welcome participants in meeting community banking needs, rather than as competitors for the same markets.

The newly opened Austin-West Garfield Federal Credit Union has already

CORPORATE FINANCE

Chase Manhattan was forced to revamp its plan for a Philippine debt conversion after it failed to attract enough commitments for a mutual fund. Instead, the bank established a limited partnership, slicing its initial target to $50 million from $75 million. ______2

A survey of Canadian financial officers reveals conflicting philosophies about bank service. According to the Greenwich Associates study, some corporate officers believe banks that take full advantage of investment banking powers would provide better coverage and service. The other segment fears that a focus on investment banking would cause banks to forsake traditional services. ______6

Borrowers are slowly warming to a loan-pricing technique that not only puts a cap on their interest expense but also leaves them free to benefit from declining interest rates. The instrument, called a participating swap, is being used by some of the nation's largest banks. ______6

Worth Repeating

The drug problem in America has truly grown to onerous proportions. And the Banking Committee is committed to aiding law enforcement officials.

Fernand J. St Germain, D.-R.I., on a proposal to require banks in areas with heavy drug trade to report smaller transactions. [Page 3]

Queue Forms for FSLIC's Biggest Payout

By JIM McTAGUE
Washington Bureau

WASHINGTON — Depositors of two failed California S&Ls will line up today for their share of a whopping $1.35 billion cash payout by the Federal Savings and Loan Insurance Corp.

Of the $1.35 billion, $1.14 billion will be paid to depositors of American Diversified Savings Bank. That marks the biggest payout since the Federal Deposit Insurance Corp. returned $465 million to depositors of Penn Square Bank, the one-office Oklahoma City bank whose 1982 collapse virtually toppled Continental Illionis National Bank and Trust Co., Chicago.

The FSLIC will also pay out $209 million to cover depositors of the other thrift, North America Savings and Loan Association. Both S&Ls are one-office operations located in the same building in the affluent Los Angeles suburb of Costa Mesa.

Largest Payoffs To Depositors

Institution	Payoff
American Diversified **Costa Mesa, Calif.**	$1.14 Billion
Penn Square Bank **Oklahoma City**	$465 Million
Empire Savings & Loan **Mesquite, Tex.**	$300 Million

The agency said it expects to recover $419 million when it sells the assets of the two S&Ls.

The actions will wipe out 42% of the FSLIC's cash. After paying $1.35 billion to insured depositors, the insurance fund will have about $1.9 billion on hand, the agency said. At the end of 1987, the FSLIC's balance sheet was in the red by $13.7 billion because of the projected costs of closing some 400 problem thrifts, according to the General Accounting Office.

Regulators decided to settle with the depositors after failing for several years to find investors to take over the institutions or their high-interest-rate accounts. The closings were announced Monday.

The institutions relied on brokered deposits to fund high-risk investments, and they never developed the type of retail deposit base that would have appealed to potential buyers, the regulators said. The amount of uninsured deposits in the institutions was not

Mismatching Revisited

By SANFORD ROSE

There is a right way and a wrong way to mismatch maturities. But, alas, many banks don't appear to know the difference.

The right way is to mismatch in such a fashion that the resulting increase in earnings is not offset by a commensurate rise in the rate used to capitalize such earnings. That way, management is happy and so is the shareholder.

Unfortunately, the average mismatching bank is not now very kindly treated by the marketplace. The evidence from a regression analysis reveals a statistically significant inverse relationship between mismatching behavior and the stock price. The bigger the mismatch, the greater the hit to the stock price.

Because the yield curve has been sloping upward in recent years, and because rates have not risen as much as the slope of the yield curve would have predicted, banks that borrowed at short maturities and lent at longer ones have greatly increased their profits. But this

Top Bankers Wary Of Loans Backing Leveraged Buyouts

By ROBERT TRIGAUX

CHICAGO — Chief executives from the world's 100 largest banks opened the annual meeting of the International Monetary Conference here with a barrage of calls for enhanced international economic cooperation.

The bankers also sounded a warning that the hot new business of leveraged buyout financing must not become a noose around the industry's neck.

Global imbalances are the "largest and most stubborn in economic history," said Commerzbank chairman Walter Seipp, president of the conference. Mr. Seipp and other speakers noted

Continued from Page 1

earnings growth, say the data, has availed the shareholder naught.

The marketplace thinks that such earnings are of poor to miserable quality. Sooner or later, it reasons, the expectations of much higher rates embedded in the upward-sloping yield curve will be realized.

Then today's contented and complacent short funder will become discontented and perhaps desperate. Anxious to shore up rapidly eroding profits, the ambitious short funder may shift from interest rate gambles to more expansive credit gambles, as did Bank of America and Continental Illinois.

Penalizing the Profitable

So the marketplace will not pay for earnings achieved by uncritically adopting liability-sensitive positions. In fact, while the marketplace tends to penalize all mismatching banks, in 1987 it was harder on those that were liability sensitive than on those that were asset sensitive. That is, it discounted the stock prices of short funders more heavily than those of long funders, despite the fact that the interest rate position of the former produced earnings gains while the posture assumed by the latter resulted in losses.

Is it possible for banks to help their shareholders by mismatching maturities? If the mismatch is done correctly, there is every reason to believe that the marketplace's reaction will be benign. **A correct mismatch is one that takes advantage of the liquidity premium in the term structure of interest rates.**

The principles underlying the liquidity-premium approach to mismatching behavior have been reviewed repeatedly in this column. But since banks don't appear to have caught on, a reprise of these principles is not amiss.

The liquidity premium arises because investors in some markets want to place funds shorter than borrowers care to borrow. Hence a risk premium must be offered to lure investors into buying longer-term securities. The existence of this premium imparts an upward bias to the yield curve.

According to the pure-expectations hypothesis of interest rate determination, if market participants expect no change in rates, the yield curve would be flat. However, if there is a liquidity premium, then the curve would slope upward.

In other words, any given long rate would not simply be an average of today's short rate and the expected future short rate. It would be higher than that average by the amount of the liquidity premium.

Biased Forwards

Assume that in a particular market the three-month rate is 5.5% while the six-month rate is 6%. Then the implied forward three-month rate (the three-month rate expected three months hence) is 6.5%. If a bank borrows in such a market at three months to fund a six-month asset, then its mismatch will succeed only if the implied forward rate (6.5%) overstates the eventual rise in spot rates.

That is, if three-month rates either fall or rise by less than 100 basis points, the bank makes money. If rates rise by more than 100 basis points, the bank loses money.

If there is a liquidity premium in this market, on average, the implied forward rate will indeed overstate the likely rise in spot rates. Since the six-month rate is higher than it otherwise would be because of the premium, the implied three-month forward must also be higher.

And because implied forwards overestimate the likely movement in spot rates, banks can usually make money short funding their asset maturities. That is, they won't make money all the time, but their mismatches will succeed often enough to make the play worth the candle.

Unfortunately, liquidity premiums are rather hard to find (see this column, Feb. 2). There is no evidence whatsoever of the existence of a premium in the CD market, the Eurodollar market, or the commercial paper market. Thus, in the great majority of markets in which banks typically operate, there is no special incentive to borrow short and lend longer.

But there is very definitely a liquidity premium in Treasuries. So the best chance for a bank to receive liquidity-premium-enhanced returns is to link assets and liabilities directly to Treasury rates. If a bank finances a six-month asset whose yield is tied to a comparable-maturity Treasury with a three-month liability similarly tied, it is likely to be able to refinance that asset three months hence at a lower cost than today's three-month implied forward rate would suggest.

Pricing Off Treasuries

The upshot is that loan officers should make every effort to price money-market loans off a Treasury rate. The current misguided policy, however, is to quote rates based on Libor, CDs, or fed funds. Either asset-liability personnel do not understand that they cannot "gap" such assets on a consistently profitable basis or else, if they do understand, they have failed to communicate this fact to the lending officers.

Suppose that a bank succeeds in tying both its lending and borrowing rates to Treasury yields — a difficult task, even assuming that the bank is aware of the need. Over what time horizon should it maintain the mismatch?

The evidence suggests that the liquidity premium reaches a maximum somewhere between six months and a year. That being the case, it makes precious little sense to mismatch between the short run — under one year — and the long run. Such a mismatch does not increase the size of the liquidity-premium-enhanced return. It merely causes the bank to assume additional yield-curve risk.

Otherwise stated, when the bank mismatches appropriately in the under-one-year period, the expected value of the position is positive — because of the premium — and the variance of returns is acceptably low. When it mismatches between the short and long runs, the expected value of the position is likewise positive, but the variance of returns becomes unacceptably great.

Two Returns

Since there is a consistent profit to be earned from moderate short funding across a confined segment of the Treasury yield curve, one would expect the marketplace to reward an institution that engages in this form of mismatching. It can be argued that such an institution earns two types of return — one derived from the liquidity premium per se and the other from the fact that it is taking some modicum of rate risk.

The liquidity-premium return is almost riskless and will remain so until the government decides to arbitrage away the premium by issuing enough short T-bills to satisfy the apparently excess investor demand for these instruments. But this is an unlikely occurrence. The return from mismatching is, however, subject to some risk.

Because the bank earns two conceptually separable returns, only one of which is really chancy, the market capitalization rate should not rise in precise tandem with the growth in earnings. In other words, intelligent short funding should end up enhancing shareholder value.

If, as the data suggest, short-funding behavior has not yet benefited the shareholder, it is probably because the great majority of short funders presently operate in the wrong markets and in the wrong part of the yield curve. ■

LETTERS TO THE EDITOR

Lenders Rely Too Heavily On Outside Appraisers

To the Editor:

James Grant's May 18 Required Reading article ["Appraisals for Sale Undermine Real Estate Values," page 4] generally misses the point by blaming appraisals for the current wave of real estate defaults lenders are suffering.

I submit the fault lies with lenders who choose to rely on appraisals rather than educate themselves or hire a sophisticated lending staff. As a workout consultant, I've seen many poor-quality appraisals with no evidence of confirming research by the lender.

Someone familiar and experienced in the real estate industry and in the subject property's market can easily recognize a fraudulent or overstated appraised value.

Lenders would help themselves considerably by closely examining and confirming a commercial property's actual cash flow before debt service (net operating income) which, after all, is ultimately the source of the lenders' repayment.

Granted, there are unqualified and even dishonest appraisers around, but knowledgeable lenders can easily avoid falling into the trap a faulty appraisal opens for them.

Education Will Be Key Banking Issue in '90s

To the Editor:

As the number of banking and financial services jobs increases and the number of young people entering the labor market decreases, it is imperative that a larger percentage of those young people have at least the basic skills. The evidence cited in your article and elsewhere suggests that high school graduates are less skilled.

This is definitely a major issue facing bankers in the next decade, and I am pleased to see the *American Banker* giving it the attention it deserves ("The Class of 2000: Will They Be Ready?" March 22, page 11).

It was especially interesting to note the many programs and activities other banks around the country are sponsoring to promote and improve education in their communities. I am sharing this information with our community relations manager.

He coordinates C&S' support to education and is personally involved in a program that provides nontraditional educational opportunities for high school dropouts.

AN AMERICAN BANKER WEEKLY FEATURE

This Week's Quote

It's very hard for customers to be the first one to do it.

— Security Pacific's David Weinstein, on participating in interest rate swaps

Credit Lines

Citicorp Wins Texas Customer

Citicorp took advantage of the disarray in Texas banking to win a new customer, BSN Corp., a Dallas-based sporting goods company. The New York giant replaces Texas Commerce Bank of Houston as BSN's lead bank.

"We wanted to get out of the banking atmosphere in Texas," said Michael J. Blumenfeld, BSN's president. "Every bit of banking business has become a horror story in terms of time and expense. We wanted to get out of Texas and stay out until the atmosphere changes."

BSN is the type of middle-market company that many banks are seeking as a customer. With 1987 revenues of $100 million, the company has been growing quickly and has been profitable since it went public in 1981. If many Texas companies take similar action, attempts by Texas banks to recover are bound to suffer.

Citicorp will provide BSN with a short-term $35 million credit facility. That will convert to a long-term facility if the planned $42 million sale of its garment division to the Prospect Group is not completed.

BSN plans to use Citicorp's investment banking services for acquisitions and financing. The company also hopes to increase its import and export activities using Citicorp's worldwide presence. "The international flavor of Citi was a very strong point for us," Mr. Blumenfeld said.

The New York bank, which had no relationship with BSN before this agreement, beat out five other competitors, none from Texas.

Citicorp "came back with the most aggressive response in terms of time of completion, pricing, and so forth," Mr. Blumenfeld said. "The time consideration had a lot to do with it. In Texas, in some cases, it can take two to three months to finalize a small transaction.

"They did what they said they were going to do," he added. "In Texas that is terribly unusual."

Four 'Lucky' Banks Added

The bank group backing a $3.1 billion credit for American Stores Co.'s acquisition of Lucky Stores Inc. has been expanded.

The added banks — Citibank, Security Pacific National Bank, Wells Fargo Bank, and First Interstate Bank — have relationships with Lucky or were involved in a $1.8 billion leveraged buyout loan to help the retailer fight off American in May.

American, the Salt Lake City-based food and drug retailer, expanded its acquisition loan from $2.5 billion to $3.1 billion and asked its four coagent banks to contribute $100 million each to a pool to make room for more banks.

Bankers said American Stores could not invite the Lucky banks into the deal when the takeover battle was in full swing because of confidentiality issues.

The four coagents on the American loan — Chemical Bank, Bank of America, Toronto Dominion Bank, and Commerzbank — each reduced their shares from about $430 million to $330 million. A banker in the group said this worked out well because the coagents already held more of the credit than they planned to keep.

Each of the coagent banks will be permitted to sell five participations with full rights and responsibilities to investors at $25 million per package. Earlier in the deal, some bankers had speculated that American would not allow its banks to sell by assignment.

Eighteen banks were invited into the initial syndication with shares between $50 million and $125 million. Banks in the upper tier are permitted to sell two assignments each.

Canadian Corporate Quandary: Defining the Role of Bank Services

By PHILIP T. SUDO

NEW YORK

CORPORATE finance executives in Canada are sharply divided on whether Canadian banks should venture into investment banking, according to a survey released today by Greenwich Associates.

Canada's deregulation policies have allowed banks to engage in a mix of commerce and banking that the Glass-Steagall Act still prohibits in the United States. A survey of 700 Canadian corporate executives there shows that some companies worry that banks will lose interest in traditional banking services.

A third of those surveyed believe banks should minimize their emphasis on investment banking and concentrate on better commercial banking services. Another 60% feel it is unimportant for commercial banks to provide a full range of underwriting and investment advisory services.

But 24% believe that concentrating exclusively on commercial banking is the least effective strategy a bank can pursue. And more than 50% feel no strong need to separate their principal commercial and investment banking relationships.

The Greenwich results indicate that corporate executives adhere to two distinct philosophies of bank service. Some feel that universal banks, taking full advantage of their new powers, would provide better coverage and service. Others fear that a strong focus on investment banking — and its more lucrative fees — will lead banks to forsake their traditional services.

The primary reason banks have become more important to them in the past 12 months, said 28% of Canadian executives, is the banks' capital markets or investment banking capabilities. But the most popular

Cap/Swap Mix Helps Manage Interest Cost

By JOHN P. FORDE

NEW YORK

BORROWERS are slowly warming to a loan pricing technique that not only caps their interest expense, but also leaves them free to benefit from declining interest rates.

The instrument, called a participating swap, is being used by some of the nation's largest banks, says David Weinstein, vice president of Security Pacific Merchant Bank here.

"We get a lot of requests for it, but it has a low hit rate," Mr. Weinstein said. "About one in ten actually gets done. It's very hard for customers to be the first one to do it."

The participating swap is one of the latest techniques that borrowers can use to manage interest costs.

Other instruments include caps, which place a ceiling on interest rates, and collars, which place upper and lower limits on the floating rate of a loan. The collar allows the interest rate to fluctuate in a range between a "floor" and a "ceiling" rate.

But each of these instruments has its own limitations. A borrower who expected interest rates to stay at present levels for the life of the loan, for example, might buy an interest rate cap in order to ensure that the rate will not rise above acceptable levels. The cap, however, would be an added cost to the borrower.

In a participating swap, a percentage of the debt bears a floating rate with an agreed-upon cap, and the remainder of the loan carries a fixed rate. A key element in the transaction is that the cap is purchased without the borrower having to pay an upfront fee.

The lender makes up for this fee by pricing the fixed interest rate portion above what the borrower would get for a straight interest rate swap. In the example in the chart, this is the half of the loan, which earns interest at 10%.

The floating portion of the loan bears interest at a rate tied to, for example, the London interbank offered rate for deposits with a maturity similar to that of the credit. Because of the cap, this rate never rises above 10% in the example cited here.

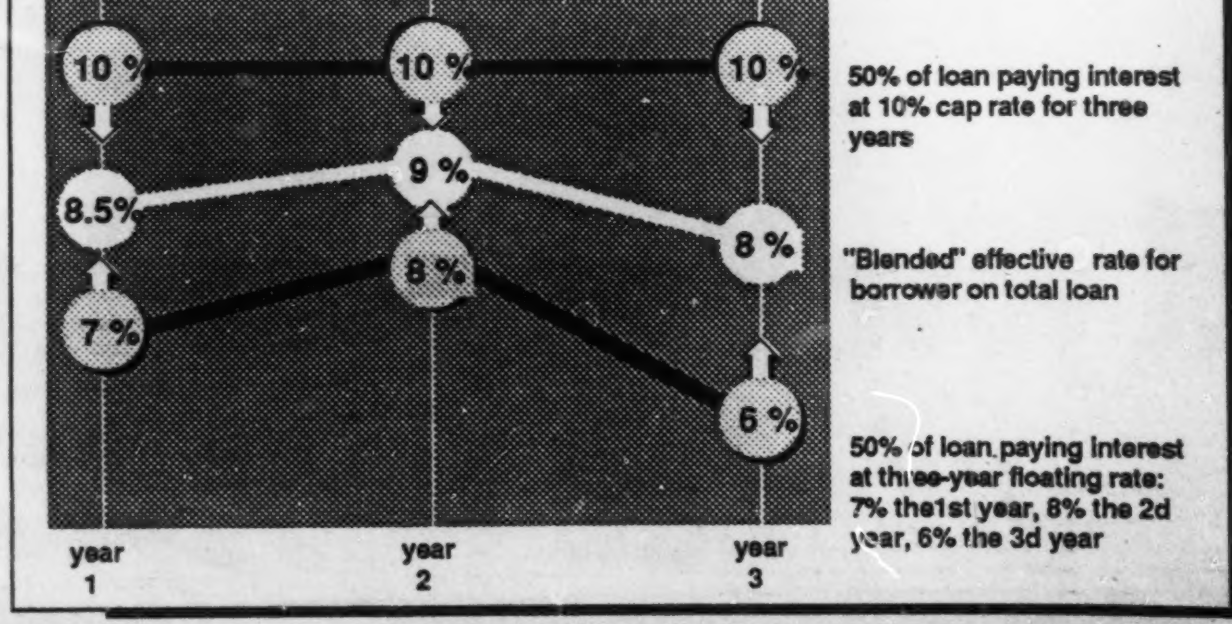
This structure accomplishes a number of objectives for both the borrower and the lender. On the borrower's side, the agreement caps the maximum interest rate to which the loan can rise at 10%. Also, it allows the borrower, through the 50% floating-rate part of its loan, to enjoy half the benefit of dips in interest rates.

For the lender, the above-market portion of the rate is considered the price the borrower has to pay for the 10% interest rate cap on the entire loan.

Also, the technique does not require the bank to set aside an extraordinary amount of capital to offset the risk of the product. Security Pacific, for example, capitalizes the instrument as two separate transactions, an interest rate cap and a swap. ■

How a Participating Agreement Works

Determining the effective rate for a loan with tiered interest rates



Empire Equity Aids Buyouts

Middle-Market Transactions Attract Buffalo Thrift Unit

By DAVID NEUSTADT

NEW YORK

AS one of the few thrifts active in leveraged buyouts, Empire of America has developed a middle-market strategy.

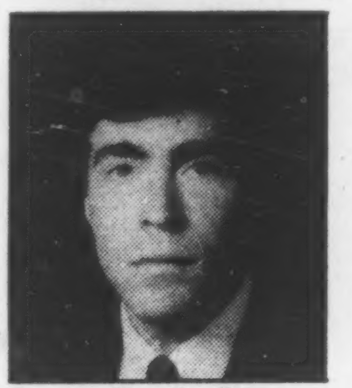
Through its two-year-old subsidiary, Empire Equity Investments Inc., the company provides mezzanine and equity investments in leveraged buyouts. It focuses on transactions between $10 million and $100 million, according to Bruce Bonhoff, administrative vice president of Empire Equity.

The unit does not limit itself geographically, with only one of every 25 investments near its Buffalo base.

Although the parent company has decided to withdraw from commercial lending, the decision will not affect Empire Equity, said Mr. Bonhoff. Empire of America, the fifth largest thrift in corporate lending in 1987, is pulling out of the business because it is not satisfied with the spreads.

Empire Equity puts between $3 million and $5 million into a deal in subordinated debt, preferred stock, or common stock. The unit makes fast decisions, an important element in winning buyout business, according to Mr. Bonhoff, who recently was given increased responsibility for operations.

The only businesses off limits to the unit are high-technology industries. The most important criteria are strong management and positive cash flow.



Bruce Bonhoff

"We don't do turnarounds," Mr. Bonhoff said.

"Before the crash, we did very little business because the multiples were so high," he said. "Since then, they have come down to a slightly more acceptable level."

Last year, Empire Equity contributed $15.6 million in income to its parent, up from $10 million in 1986 and $2.9 million in 1985. With a staff of five, its expenses are not substantial.

Mr. Bonhoff joined Empire in 1984 after seven years at Manufacturers and Traders Trust Co. in Buffalo. He graduated from the State University of New York College at Fredonia and earned an MBA in finance from Canisius College, Buffalo. ■

3 Banks Lend Support to Macmillan

By SUZANNE E. MILLER

NEW YORK

THREE banks have agreed to lend Macmillan Inc. $1.2 billion to finance the publisher's struggle to remain independent from its unwanted suitor, the Robert M. Bass Group, Fort Worth.

On Saturday, the group boosted its bid to $73 from $64 for each of the company's 28 million shares outstanding. That raises the total bid to about $1.9 billion from $1.6 billion. The Bass group now owns about 9.1% of the stock.

Citibank, Morgan Guaranty Trust Co., and Toronto Dominion Bank have scheduled a meeting for June 14-15 and plan to invite 45 lenders into the syndication. Manufacturers Hanover Trust Co. and Bankers Trust Co., traditional lenders to Macmillan, are not participating in the loan, bankers said.

The credit package will be structured in two parts with the bulk of the money in a reducing revolving credit. The remainder will be in an asset sale bridge loan. Bankers said they are still working on details of the loan sale.

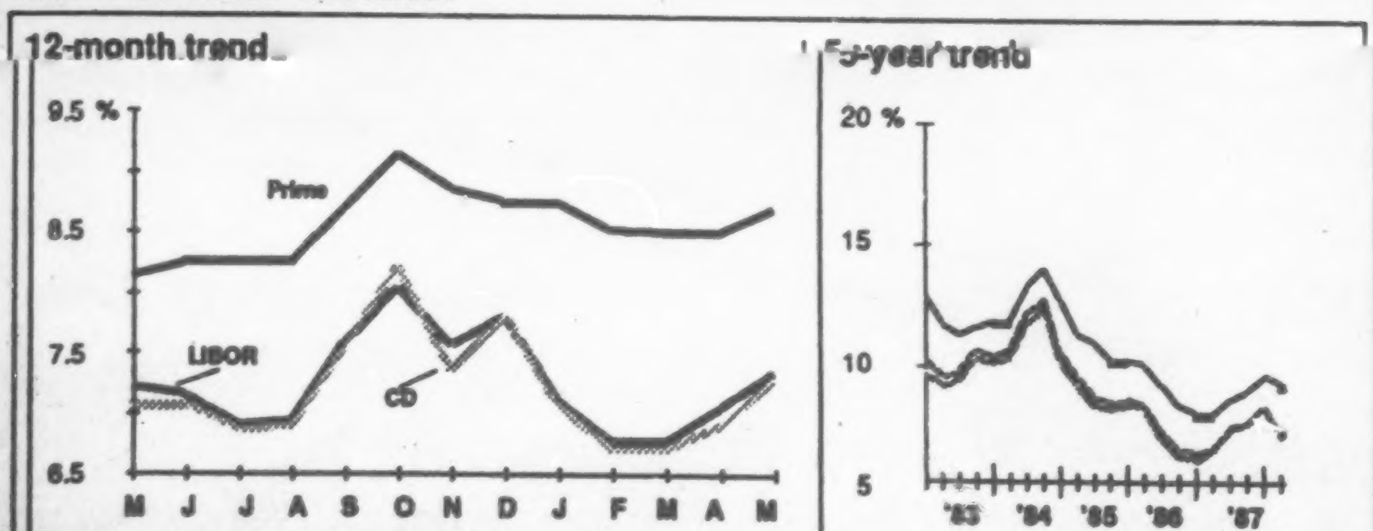
One banker noted that Macmillan "would like to have some say," either directly or indirectly, over which banks join its lender group.

Bankers noted that the company has allowed some secondary loan sales activity in the past, although the publishing and information company historically is not an active borrower.

As part of its move to remain independent, the publisher announced last week that it would restructure by spinning off assets and creating another company. This may have seemed sudden to many market participants, but bankers said Macmillan has been working on the $1.2 billion loan for at least four months.

If the restructuring move is successful, the publishing company will be divided into two separate entities: Macmillan Publishing and Macmillan Information Co. ■

Interest Rate Monitor



Monthly Averages

	This Month 5/88	Last Month 4/88	Year Ago 5/87
Prime	8.70	8.50	8.14
CD (90 Day)	7.29	6.89	7.05
LIBOR (90 Day)	7.34	7.05	7.21

Canadians Ponder Bank Services Mix

Continued from Page 6

reasons cited were related to traditional banking: improved service in operations (36%) and a demonstrated willingness and creativity in providing credit (34%).

A majority of those surveyed agreed — 36% strongly — that U.S. commercial banks should not be allowed to offer full investment banking services in Canada unless Canadian banks are exempted from Glass-Steagall in the U.S. Nevertheless, Canadian firms frequently turn to American banks for takeover defense, international divestitures, commercial paper deals in the U.S., and advice on U.S. mergers and acquisitions.

Canadian banks had feared that with deregulation, foreign firms would invade the domestic market. Although Canada is one of the world's 10 largest economies, its domestic capital markets remain relatively small.

But Greenwich notes that foreign firms have yet to invade Canada for three reasons: some regulatory hurdles remain; the world's largest institutions are focusing their international efforts on New York, London, and Tokyo; and foreign firms have been able to compete for business without a large presence in the country.

The survey found that Canadian firms look for financial services on a transaction-by-transaction basis. Sixty-eight percent of corporations surveyed said they are transaction oriented and 32% relationship oriented. That is almost the mirror opposite of U.S. corporations, of which 62% emphasize relationships and 38% transactions.

The mean number of banks used by Canadian corporations is five — this is a country where a handful of leading banks dominate the financial scene. Large firms paid nearly $500,000 in noninterest fees to their commercial banks over the past 12 months, for services such as account handling, cash management, and assurance of credit availability.

For investment banking services, the typical corporation averages 3.3 relationships. The key factors they cite when considering a secondary firm for capital markets or corporate finance activities are creative and innovative ideas (57%), a solid understanding of the company's financing needs (46%), capable product specialists (36%), careful documentation and explanation (29%), and the ability to make prompt commitments (27%).

Over the past 12 months, the average firm paid fees and commissions of $2.9 million for capital markets and corporate finance activities — more than twice the previous year's level, according to the survey. ■

Panel Approves Bill Allowing All Banks into Massachusetts

By MICHAEL WEINSTEIN
New England Bureau

BOSTON — The banking committee of the Massachusetts legislature passed a bill that would open Massachusetts to banking companies nationwide effective Jan. 1, 1990.

Interstate Banking

The bill, which will include consumer protection and community reinvestment provisions, still has to be passed by the full Massachusetts House and Senate and signed by the governor.

The legislature often follows the lead of its committees. But there is still some opposition to the bill. The state's two biggest banking companies, the Bank of Boston Corp. and the Bank of New England Corp., oppose nationwide banking.

Paula W. Gold, secretary for consumer affairs and business regulation who oversees the banking department for the governor, supports a nationwide banking bill that includes provisions for consumer protection, community development programs, and local management presence.

A further element of uncertainty in Massachusetts politics is the presidential campaign of Gov. Michael S. Dukakis, which could influence a number of issues.

The bill does not include a provision to lower the tax rates on Massachusetts banks, which had been supported by

From Language to Laws, Global Bankers Wrestle with the Shape of the Industry

By ROBERT TRIGAUX

CHICAGO — Toru Kusukawa is jealous of his fellow global bankers. The deputy president of Fuji Bank Ltd., one of the world's largest financial institutions, said he believes Japanese banks suffer a major disadvantage in competing overseas because virtually no one uses the Japanese language to conduct international business.

"American and English bankers who can use their mother tongue to conduct international business have a great advantage. I must say I envy them," he says.

It's not easy managing a $50 billion, $100 billion, or $200 billion bank these days, as the top executives of more than 100 of the world's largest financial institutions readily admit during this week's lavish gathering of the annual International Monetary Conference.

At a meeting celebrated equally for its agenda of social entertainment as well as its big bank camaraderie, concern of language barriers may not dominate the debates on hostile takeovers and unequal regulatory treatment. But it does reflect the range of management problems besetting today's bank executives.

On Tuesday, the bankers met in private to argue the future composition of

S&L Execs See Political Ploy In FSLIC Payout

Timing Tied to Bill Banning Exit from Insurance Fund

By ROBERT LUKE and JIM McTAGUE

Some California thrift executives believe politics played a role in federal regulators' move this week to liquidate two California thrifts at a whopping cost of $1.35 billion.

Liquidating American Diversified Savings Bank and North America Savings and Loan Association, both of Costa Mesa, will wipe out 42% of the Federal Savings and Loan Insurance Corp.'s cash.

"You have to look at the political timing of the action," said one thrift executive, who asked not to be identified. "Why not [move] in August, when Congress is out of session? The answer has to do with the moratorium."

Specifically, Congress is considering legislation to extend a one-year ban on thrifts switching to the Federal Deposit Insurance Corp. from the Federal Savings and Loan Insurance Corp., which assesses a higher premium. The moratorium is scheduled to expire on Aug. 10.

Federal Home Loan Bank Board Chairman M. Danny Wall, a former staff director of the Senate Banking Committee, supports the moratorium, which is vigorously opposed by thrift industry groups.

"I suspect that Danny Wall is scaring Congress to act," the thrift executive said, noting that the FSLIC is rapidly running out of funds.

The General Accounting Office, an arm of Congress, has estimated that at yearend 1987, the FSLIC's balance

The Value of a Branch Is Measured in More than Deposit Ranges

By KENNETH H. THOMAS

SANFORD ROSE'S Feb. 17 column entitled "There's Still Hope For the Branch" presents a fairly balanced view of a vitally important retail banking topic, namely, the future of the branch.

The editorial did not dwell on the controversial finding by one consulting firm that around half of all branches are unprofitable and by implication should be closed. Rather, the comments focused on various strategies suggested by another consulting firm to enhance branch performance. Based upon that firm's experience with one regional bank with over 200 branches, those strategies reportedly could result in a remarkable turnaround: The proportion of branches exhibiting negative returns could fall from 48% to 10% or 11%, and the proportion earning less than the corporate hurdle rate could drop from 62% to 21%.

This case study emphasizes the importance of distinguishing between branches that are truly profitable and those that are not. A truly unprofitable (i.e., negative net present value) branch that is a chronic underperformer may have to be closed, sold, swapped, or otherwise disposed of. This branch disinvestment alternative is usually reserved for those problem or serious problem branches where locational (i.e., the site, immediate area, and market area) factors have been identified as the primary causative agents.

Obviously, there is a whole set of nonlocational determinants of branch performance including the familiar marketing mix "P" variables of pricing, product, promotion, personnel, and other management and operating policies. It appears that the performance-enhancing strategies recommended in the cited case study were primarily of the nonlocational variety such as changes in pricing, personnel, and corporate policies.

A hasty recommendation that the subject bank dispose of 48% to 62% of its branches, which was not made in this instance, would clearly have been totally inappropriate and unjustified. Rather, it seems from that case study that the proportion of truly unprofitable branches that might have to be divested would be between 10% and 21%.

The '80/20 Rule'

Our consulting experience since 1975 as specialists in branch evaluation and location research exclusively for financial institutions has confirmed our version of the familiar "80/20" rule: Approximately 20% of a financial institution's branches cause 80% of its branch problems. The first or lowest 10% are categorized as problem or serious problem offices often requiring branch divestiture; the second 10% are problem, near problem, or potential problem offices sometimes necessitating such extreme action.

We feel that the conservative approach to branch planning dictates use of our 80/20 rule to trim the fat from the retail branch network as appropriate. The case study cited in the editorial would appear to support this rule. However, going upwards to 40% means cutting into the meat, and at or over 50% would mean cutting into the bone.

We would recommend that serious consideration be given to any such plans to drastically reconfigure a retail branch network. Such radical and irreversible surgery on a branch network might be appropriate if management has decided to change the bank's branching objectives or its entire retail orientation. Otherwise, a typical retail bank or thrift closing 40%-60% of its offices would certainly represent an unusual set of circumstances.

The previously referenced study concluded that a bank or thrift branch needs $20 million-$25 million in deposits today just to break even (see "Study Finds Half of Nation's Branches Unprofitable,' *American Banker*, October 10, 1987, page 3). It was noted that the proportion of all U.S. bank and thrift branches that were or were destined to be unprofitable was at least 40% but as high as 60%, since that percentage of branches had $20 million or less in deposits in 1986.

We agree that there is a generally positive relationship between branch profitability and local retail core deposits. However, this is not a perfect relationship, and bankers must be careful not to equate branch profitability and total branch deposits.

Break-even deposit levels differ among banks and among branches within any bank because of different fixed and variable expense structures. For example, we have seen some branches with deposits in excess of $25 million that are unprofitable because of their cost structures.

Profitability Differs from Deposits

Conversely, it has been our experience that many branches in the $10 million-$20 million range are profitable, and any wholesale recommendation to close branches simply because they are in this deposit range would be a mistake.

In fact, we have seen some small branches with deposits of less than $10 million that are profitable because of low overhead and outstanding loan portfolios. Why would we even have loan production offices with technically no deposits if these facilities were not profitable? Different offices can serve different delivery system objectives and still be profitable.

For these and other reasons it is difficult to generalize on a universal break-even level or even range for all offices in all areas. For those wishing to make decisions with deposit break-even analysis, the conservative approach to branch planning suggests use of relatively low ranges of local retail core deposits.

For example, at the beginning of this decade an assumption of a $6 million-$10 million range for seasoned offices would have been appropriate. Increases in fixed and variable costs, among other things, since then would obviously imply a higher range. An assumed range of $10 million-$12.5 million in local retail core break-even deposits, precisely one-half of the previously-cited study's finding of $20 million-$25 million, would be more representative of the conservative approach to branch planning in today's environment.

Because branch profitability is much more than just the level of total deposits, we prefer use of discounted cash flow techniques (e.g., net present value) over deposit break-even analysis in branch investment and disinvestment capital budgeting decisions.

Many financial institutions, especially the larger ones, have formal branch profitability measurement systems. It has been our experience that most of those who do not have such systems attempt to use some type of informal measurement procedure to try to monitor absolute and relative branch growth, activity, and cost levels. It would indeed be surprising to learn that management and their formal or informal branch profitability measurement procedures have been so far off to allow 40% to 60% of all branches to continue operating if they were in fact

LETTERS TO THE EDITOR

Nation's Credit Unions Not Merely an Idle Threat

To the Editor:

In response to the comments of Elspeth Revere, president, Woodstock Institute, Chicago, in her letter printed in your June 3 edition ["Credit Unions' Threat to Banks Is Exaggerated," page 4], I would like to remind her that cancer starts out as an insignificant growth but, if not checked, takes over.

I am reminded of the similarity between credit unions and savings and loan associations of 50 years ago, when banks wrote them off as too small to matter and, in fact, even helped them operate. Look at the Federal Savings and Loan Insurance Corp. and the savings and loan industry today.

John A. MacNaughton

Providing Standby Credit Is Costly to Foreign Banks

To the Editor:

We refer to John Holden's article in the May 10 issue of the *American Banker* concerning Deutsche Bank's backup of the Waveland Associates Project standby liquidity facility made available by Mellon Bank, Pittsburgh ["West German Bank Provides Backup for Letter of Credit on Chicago Issue," page 23].

We thought you, as an important publication in the financial community, would like to know that for standby letters of credit, German banks are required to allocate to capital an amount equal to 50% of the regulatory capital-to-assets ratio for commercial loans. These guidelines increase the cost of issuing standby letters of credit relative to U.S. banks, which have no such restriction.

While risk-based capital standards for off-balance-sheet items are currently being considered by U.S. and foreign regulators alike, we believe that the rules affecting German banks are more, not less, stringent than those affecting U.S. banks.

Robert E. Schlegel, Vice President
Douglas S. Byers, Assistant VP
Deutsche Bank AG
New York

Where Congressmen Cash Their Paychecks

To the Editor:

The *American Banker's* page 2 article on May 10 ("Credit Unions Make Inroads into Bank, S&L Markets") was very comprehensive and well done. There was one glaring omission, however, and that was an explanation of why the credit unions continue to escape the federal income taxes that are a major fact of life for banks and thrifts.

Virtually every member of Congress and nearly all of their staff members (and staffs of the committees) are members of the Wright Patman Credit Union, which has its offices in the Capitol Building. That's where the congressmen and their employees cash their paychecks, as well as get their car loans, etc.

Clearly, nearly everyone in Congress has a vested interest in the continued well-being of the Wright Patman Credit Union, so it seems highly unlikely that credit unions will be on the same playing field as the rest of us, at least in the foreseeable future. Talk about conflicts of interest!

James G. Schneider

From the Middle Ages to Money Centers

The following is adapted from a keynote address by David C. Cates, delivered April 14 before the Institute of International Bankers, Washington. Mr. Cates is president of Cates Consulting Analysts Inc., New York.

□

THE STUDY OF HISTORY is also our window on the future. This is not because some iron determinism — if we could just discern its laws — shapes our destiny. Rather, the patterns, trends, cycles and sheer disorder of the human record are suggestive of what might lie around the next bend.

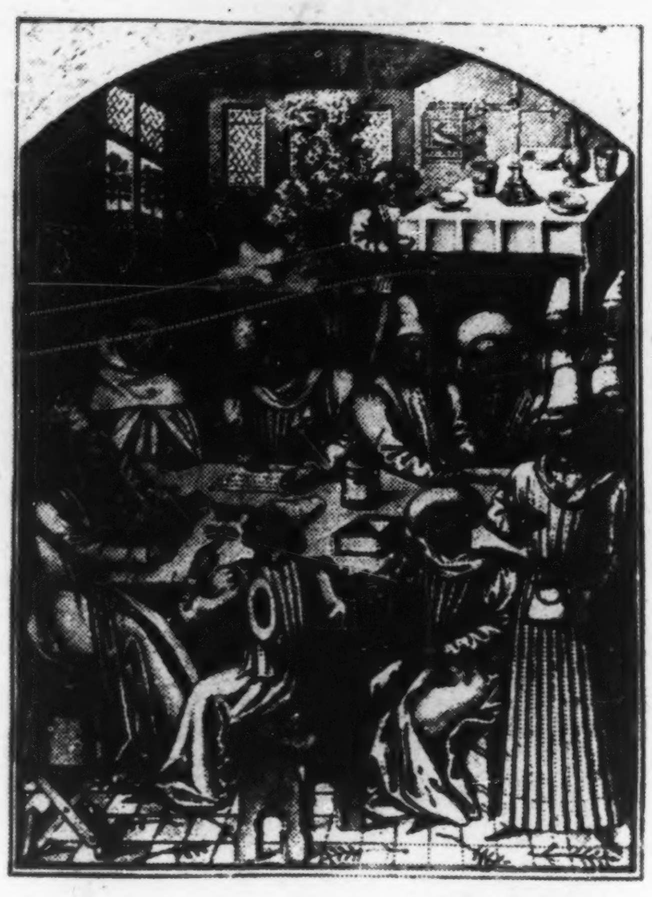
A sense of history, then, enriches our thinking by giving us complex models of plausible outcomes, which we can adjust to the different context of the present. Mere study of the present, where most of us spend our energy, is sterile and misleading. Worse yet, it encourages a dangerous self-importance, as though our management of "now" is all there is.

I will divide my remarks about the rise and fall of international banks into four parts. First, I will recount the surprisingly modern story of the multinational Medici Bank of Florence that flourished and fell during the 15th century. Second, I will describe the war-driven rise of Amsterdam and London as financial centers in the 17th and 18th centuries, a unique evolution that established the models for later systems.

Third, I will raise the question why some larger banks have declined, occasionally to the very threshold of failure. The richest laboratory for such an exploration, I regret to say, is this country from 1974 to the present. Why, in the midst of plenty that has drawn hundreds of foreign banks to exploit banking opportunity here, should there be a steady string of domestic banking disasters beginning with Franklin National, moving on to include First Pennsylvania, Continental, Seafirst, Interfirst, and too many others?

Last, I will raise some conjectures about the future of international banking. What is to be the world role of U.S. banks in an era when this country has rapidly become the world's largest debtor nation?

How does this shift affect the outlook for our money center banks? Will this outlook be further shaped by a decline in the perceived value of deposit insurance? What does all this mean for foreign banks in this country? Finally, what are some of the management challenges that many foreign banks have yet to address?



Bettmann Archive

The de Medici family became prominent throughout Europe in the 14th century as merchants and manufacturers specializing in wool and silk. This business became the basis for a merchant bank, which flourished in the next century.

Like other Italian merchants, the Medicis traded along very ancient north-south routes that ran through the old cities where they ultimately established bank branches: Venice, Milan, Rome, Avignon, Geneva, Lyons, Bruges, and London.

In that era, these cities were rare, tiny islands of trade and manufacture within a society still based predominantly upon feudal obligations. This was a society of self-sufficient agricultural estates, mutual military assistance, and a church oriented to the complex loyalties and values of the feudal system.

The mainstream culture did not leave merchants and bankers with a lot of prestige or bargaining power among the princes of the larger society. Fortunately, the cities from which bankers operated had won enough political freedom to render them reasonably safe havens for commerce.

The economic basis for this uneasy freedom lay in the landowner's need to import and export bulk products such as wine, wool, olive oil, cloth, or timber, depending on the region; to buy luxury goods such as silk and spices; and to spend, invest, and borrow cash. An increasing use of cash, as the scale of warfare advanced, was to pay for armaments and mercenaries.

Deposit banking — a practice begun in Venice two centuries earlier — flourished under Cosimo de Medici, who directed and built the Medici Bank from 1428 until his death in 1464. There were five sources of funds to support the lending and trading positions of the bank.

First, there was the capital contribution of the partners. Second, there was the further investment of partner wealth in the deposit instruments of the bank, on which interest was paid at rates ranging from 8% to 12% during the century.

Third, wealthy Italian landowners — despite the criticism of church authorities who thought they should be mending and improving their estates — deposited funds with the Medicis at interest, thus helping indirectly to finance foreign trade. Fourth, merchants and correspondent banks maintained accounts against which to settle transactions or to justify letters of credit.

To illustrate, the bills of a lesser-known merchant would be more acceptable in London, say, if the Medicis were his agent. Finally, princely courtiers and mercenaries used the bank as a haven for their wealth:

"It was not without cause that politicians were eager to place some of their funds with international bankers. They wanted an investment that was safe

from confiscation should they fall into disgrace or flee the country. Real estate could not be concealed, but accounts with an international banking house could be whisked out of the country with a stroke of the pen."

(From Raymond deRoover, "The Medici Bank, Its Organization, Management, Operations and Decline." New York University Press, pages 54-55.)

Ledgers Long Since Vanished

We do not know the leverage ratio of the Medici Bank because there is no surviving balance sheet of any Medici affiliate or of the consolidated whole. The Florence records were destroyed in the sack of Medici property during the revolt of 1494, the bank's final year.

But we do know that a single loan to Charles the Bold of Burgundy, made from Bruges in 1471, was equal to two times capital when it was first written, and was renegotiated in 1478 to more than three times capital before his successor defaulted. The overall leverage of the bank, therefore, was probably substantial, if a single asset could be such a high multiple of capital.

In addition to its deposits, the bank traded merchandise and commodities as agent for others and for its own account. To illustrate, there are detailed records of the costs of a joint venture to import 100 barrels of almonds by galley from Valencia to Bruges in 1441.

Since these had not been presold, they were somewhat haphazardly jobbed and retailed during that spring and summer. Eleven barrels had to dry out in an attic. (Could this be the origin of our taste for salty nuts?)

The bank's chief asset-generating function, however, was its dealing in bills of exchange, the dominant credit instrument of the era. A bill of exchange, typically issued to finance cross-border trade, was written in one place and currency, to be collected in a different place and currency.

Bills were also traded in the money markets of the major cities. Time intervals increased both the credit and exchange risk. Shipping customarily consumed three months between Italy and London, two months between Italy and Bruges, and one month between Bruges and London — or Paris/Bruges or Paris/London. To be sure, news travelled faster than freight, but the communications gap was still daunting.

A key question: How could a 15th-century banking business, depending then as now upon the reasonably predictable calculation of interest, be conducted within a system of church regulations that strenuously forbade usury — namely, any obligatory payment of interest? In the church view, usury was an invasion of property rights, since "more is asked than was given."

Nor was it an irreligious age in which sophisticated city dwellers attend church only at Christmas and Easter, ignoring its rules at other times. The Medici bankers were as devout as the rest of Christendom. To illustrate, a famous painting by Hans Memling shows the Medici Bruges manager, Tommasso Portinari, stark naked on the occasion of the Last Judgment, earnestly praying as his life is weighed. Nearby his similarly clad wife pleads on his behalf, as a cast of thousands await their turn.

Scriptural Loopholes

The answer — different for lending than for deposit-taking — lay in certain tiny cracks in the regulatory structure. Church law forbade fixed and certain interest, but did not bar the discounted "adventure of principal" if the potential for loss stood between the loan and its collection.

Thus bills of exchange were discounted, the origin of our current practice of discounting. The amount of discount served to mask compensation for credit and exchange risks, all carefully computed and negotiated.

Deposit interest was a different story. Interest could be paid and recognized as such, but only if understood to be a discretionary "gift' rather than a contractual obligation. It was the reputation of the bank, not a legally enforceable guarantee, that stood behind the implied promise to pay.

When Philippe de Commines, a Flemish diplomat to the French court, tried to collect back interest from the failing Lyons branch in 1478, he was rebuffed. He kept writing his friend Lorenzo, then head of the bank, for years without success.

The Medici Bank also had a funds-transfer function. For example, as fiscal agent for the Vatican, the bank handled all papal collections and disbursements in Europe and England.

The disbursements were for military subsidies, among other things. The collections, much more important, arose from the widespread sale of offices and indulgences, a significant source of papal revenue.

For all clients, the Medicis made paper entries from one branch to another in favor of correspondent banks, merchants, and other Medici affiliates. Because of the network of branches and correspondents operating in every country of Europe, these paper entries were a useful substitute for scarce coin and its shipment — a risky and costly endeavor.

> Deposit banking flourished under Cosimo de Medici, who directed and built the Medici Bank from 1428 until his death in 1464.

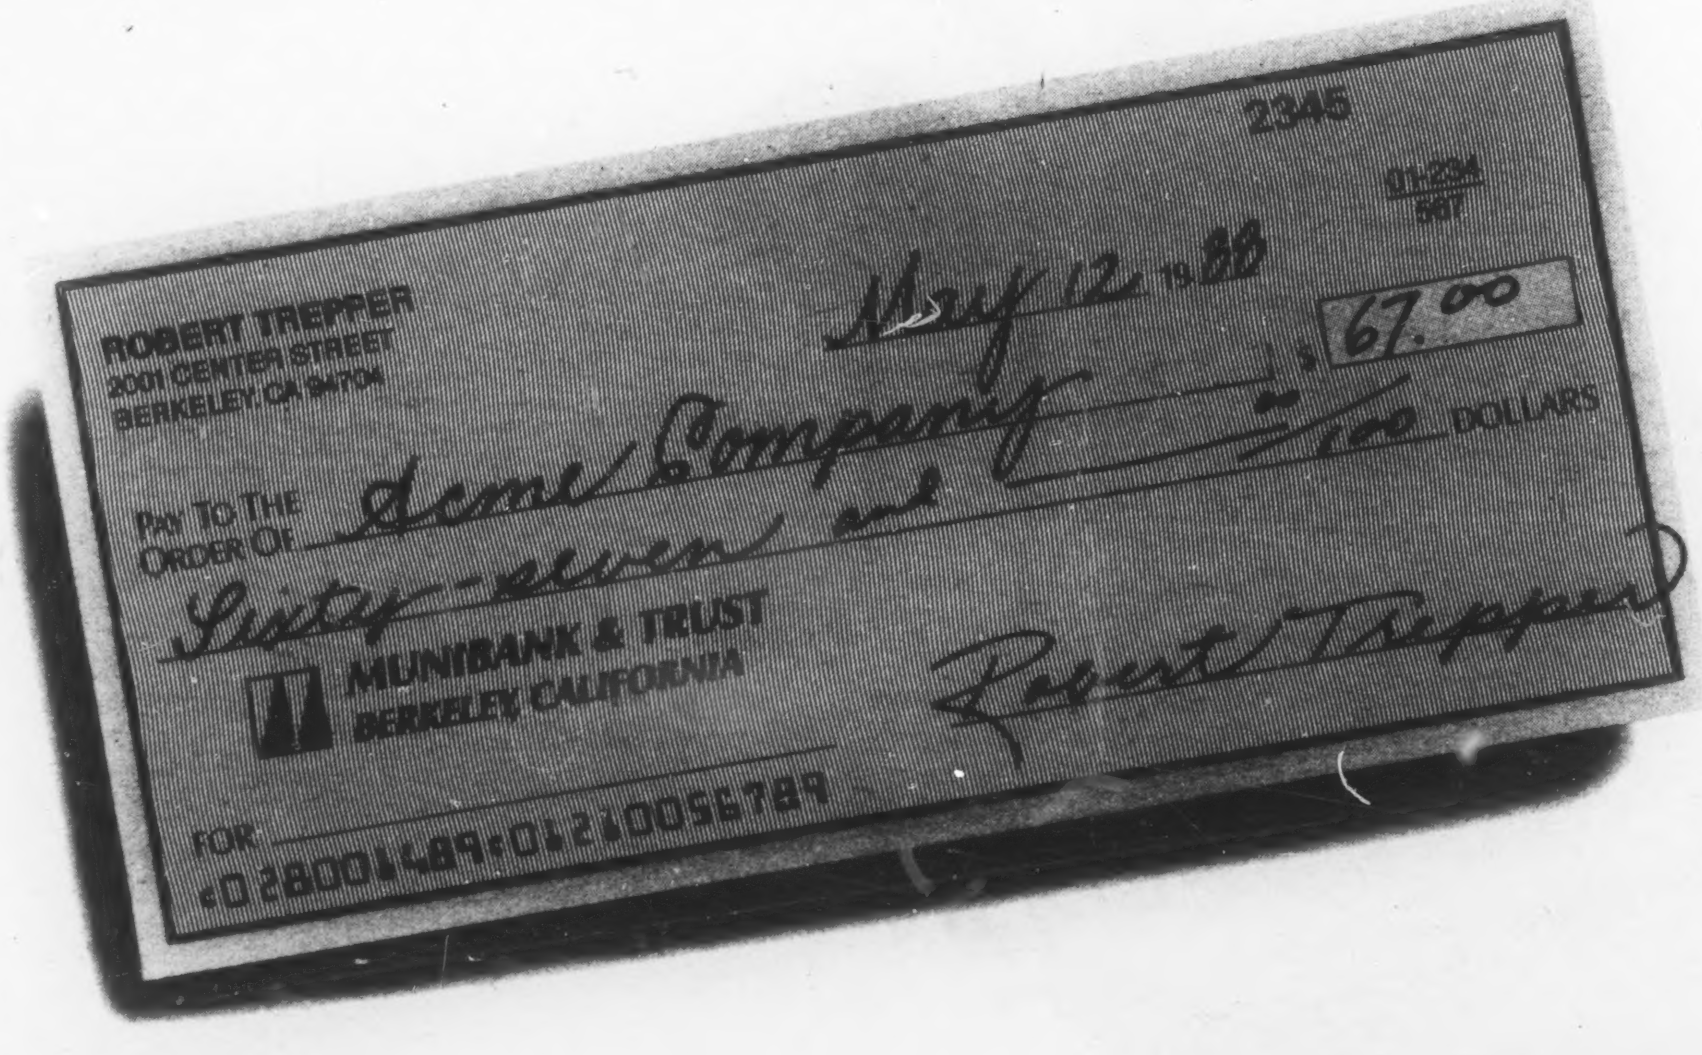
Underlying all this international activity was the fact that medieval Europe through the 15th century was, in fact, an economic "common market," before the rise of sovereign nations made international finance more difficult.

Cosimo organized the bank's branch system on a decentralized basis, unlike other Italian banks of the time. Partnership agreements governed the operations of each Medici branch, which together formed a system of controlled affiliates.

These documents show that the Medicis contributed roughly 60% of the capital, with the balance coming from loyal lieutenants — perhaps including a former branch manager — but always including the current branch manager. Under Cosimo's management these detailed agreements explicitly forbade the manager to lend to princes, a rule broken shortly after his death.

The affiliate system had the advantage of giving the local manager a stake

WHY HANDLE ALL OF THIS,



It's a simple, but brilliant, idea. Capture the images of documents electronically and then transport *those* for processing, rather than shuffle loads of paper around. It's called Image Transaction Processing (ITP), and though it sounds easy enough, it took a company with the know-how and resources of TRW Financial Systems to make it happen.

But make it happen we did. With ITP systems designed to process more documents for less money than any other system available. And that goes a long way towards reducing your mountains of paper to, well, molehills.

You'll also reduce a few other things as well. Like your processing time, error rates and, most important,

in a piece of the business too remote to be managed directly from Florence. The system had another advantage as well. It limited the legal liability of the total enterprise.

Thus in 1451, when a Florentine merchant sued the Bruges branch for defects in a shipment of wool originating from the London branch, the municipal court upheld the Bruges manager's argument that the two were separately organized businesses, despite their common control by a single family.

The decline of the bank began in the mid-1460s. There were four causes. First, successor management after Cosimo's death in 1464 proved lax and directionless.

Too much authority was soon given to local, poorly controlled managers. Cosimo's son Piero was ill and bedridden, surviving his father only by two years. He is on record, however, as urging retrenchment.

Piero was succeeded by Lorenzo the Magnificent, ruler of Florence, statesman, patron of the arts, and companion of humanists. Lacking interest in business, he relied on his adviser, Francesco Sassetti, a former branch manager in Lyons and Florence, to run the whole enterprise and to generate the substantial partnership returns Lorenzo needed for household expenses. Thus the bank probably became more leveraged at the very time that its business problems intensified.

Second, trade fell off from the 1460s through the rest of the century. One mark of this falloff was that gold rose steadily in relation to silver, the medium of commerce. Since bills of exchange were usually denominated in silver, and deposits usually in gold, the adverse shift in the monetary ratio probably caught the Medicis in a classic bind between the relative values of assets and liabilities.

We also know that the wool and cloth trade was hurt by the disruptions of a civil war in England, and by the deliberate English recruitment of Flemish weavers and other artisans. This shift toward self-sufficiency cut the bank's trading volume in a key commodity.

A third problem was that Lorenzo's money needs led Sassetti to relax the former ban on sovereign lending. In the renewal of the partnership agreement with Bruges in 1471, for example, Portinari was, for the first time, permitted to finance his patron and client, Charles the Bold, Duke of Burgundy and ruler of the Low Countries.

A few years earlier, the London branch had caved in to the insistent financial demands of Edward IV, who proved unable to reconcile a bitter civil war. Charles was killed in 1477. Lacking a male heir, his small duchy was annexed in the next year by his son-in-law, Maximilian of Austria, who then insisted on further loans. The defaults on all these loans led directly to the failures of both the Bruges and London affiliates.

An early example of a debt-for-equity swap — a familiar topic of discussion today among those who ponder the reduction of Third World debt — occurred in 1478 when the Bruges affiliate tried to settle its loan to Maximilian. In return for principal reduction, the Medicis gained the right to collect harbor tolls at Gravelines, a Channel port near Calais. The steady decline of the wool trade with England, however, did not bode well for the value of this property.

Bettmann Archive

The final problem, which closed the Medici Bank for good, was simply the rising tide of political risk throughout Europe. The rapidly advancing scale of warfare had begun to destabilize the pluralistic system of feudal loyalties in favor of a few powerful nations, themselves in mortal contest.

These tectonic agonies would not end until Napoleon's defeat at Waterloo in 1815. One consequence of these national wars was that finance, truly international in the 15th century, became nationalized, with sharply different systems of public credit and levels of interest rates.

Should it surprise us that the world's first multinational, multibank holding company should come and go during the course of a single century? I don't think so. The social environment was simply too hostile to permit long life to merchant banking firms.

The death of kings took center stage as a spectator sport, and cathedrals, not bank headquarters, merited "landmark" designation. Though one or two Italian banks can trace their corporate lineage to the 1500s, no others can. The earliest still-surviving commercial bank is the Royal Bank of Scotland, founded in 1695; the earliest still-surviving Dutch bank is the Hoop Bank, founded in 1760.

Still another mark of the alien ideology of the time was the decision of Pope Innocent VIII in 1488 to legalize — and organize — the persecution of witches. This system, which established inquisitors and informers, would be copied intact by the Protestant religions. Across the next 200 years, several hundred thousand fatalities would occur.

Center Shifts to Amsterdam, London

The ever-more-costly wars of the next three centuries quickly weakened smaller players like Florence, Venice, and Burgundy, in favor of a few emerging nations: France, Spain and England. Yet nothing was settled, and incessant wars of attrition continued at ever higher cost. In this environment, the new art of public finance became as important a factor in victory as military and diplomatic skill.

This was how tiny Holland could succeed in its 80-year rebellion against Spain, which had inherited the Low Countries from Maximilian. True, Holland had advantages.

For one thing, Spain faced formidable supply-chain problems in subduing the distant Netherlands. Second, Spain was suffering elsewhere from what Paul Kennedy calls "imperial overstretch', a frontier of commitments that finally reduced it to an exhausted sec-

your cost per transaction. By as much as 40%.

At TRW Financial Systems we've been providing ITP systems that perform this well since 1974. Today you'll find our systems processing payments, sales draft receipts and checks in some of the biggest retail and financial institutions in the country.

You'll also find them in some not so big companies. Because no matter if you process 200,000 payments a month or twice that many in an afternoon, there's a TRW ITP system to do the job. And, best of all, if your small job of today grows up to be huge, your TRW ITP system can grow right along with it, so you'll never lose control.

If you're interested in tighter control and lower costs, call Robert Trepper at TRW Financial Systems. You can reach him at (415) 548-8572.

And he'll show you how even the most complicated transaction processing job can be reduced to its essentials.

ond-class power by 1650. Third, the Dutch, then preeminent traders to the Far East, controlled the world's best merchant marine and navy.

At least as important, however, was the triumph of Amsterdam as an international money center, serving the nation as an engine of war finance. The growth of the Amsterdam money market, much larger than any predecessor, was funded in part by the liquid wealth of prosperous Low Country traders and manufacturers, and in part by "flight capital" from the rest of Europe.

The surplus of savings was so huge, in fact, that Dutch war bonds could be floated at rates as low as 4%, and commercial loans at less than 2%. The Amsterdam market even helped to finance Spain, albeit at rates of interest as high as 40%. (The average Spanish rate paid to bankers was 12% to 14%.)

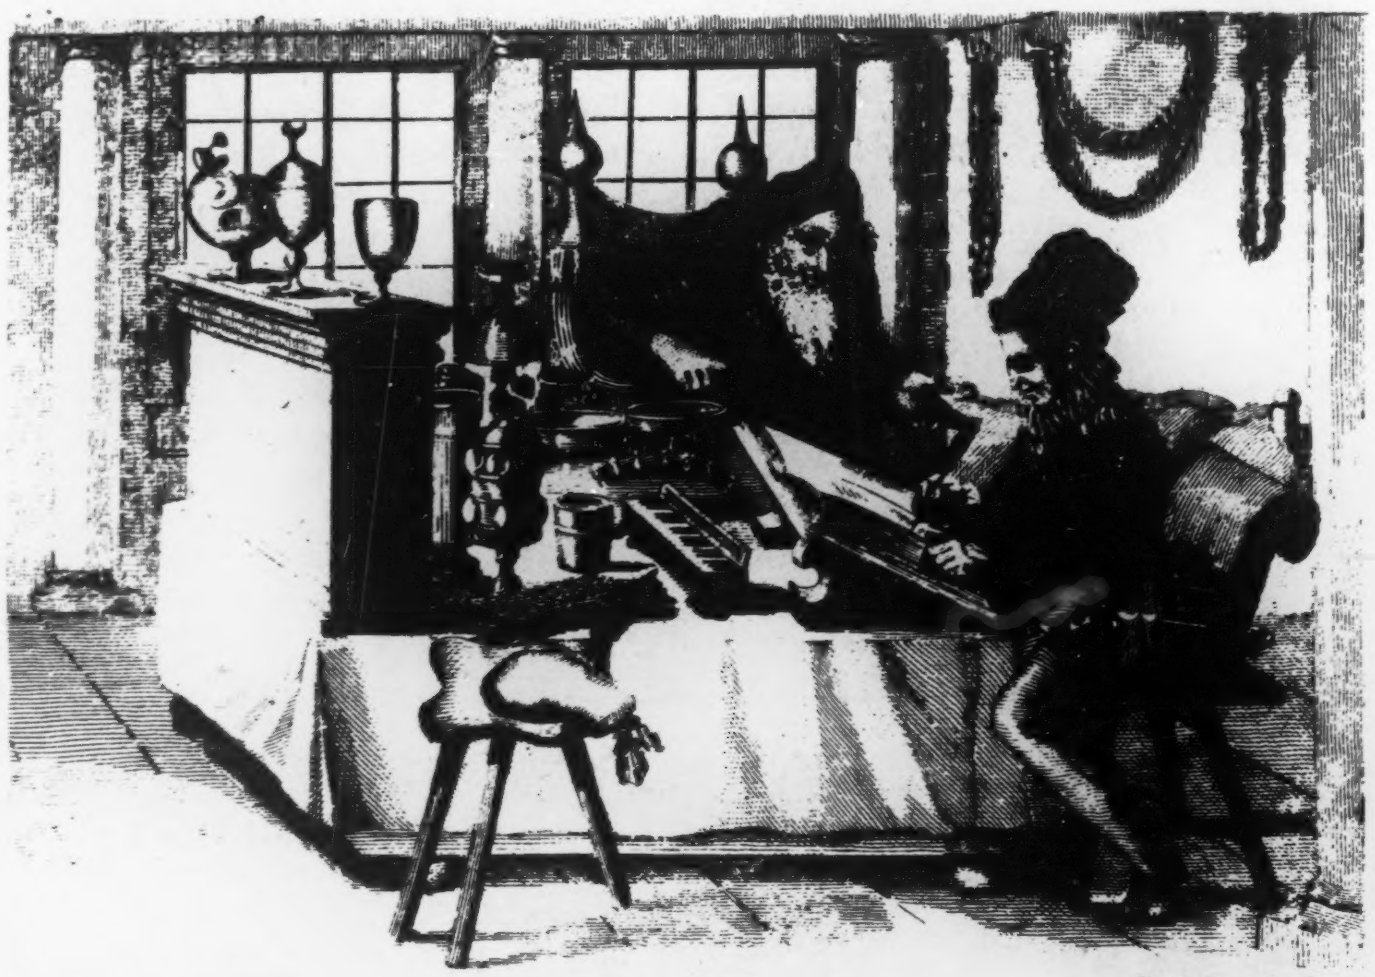
Merchants Pulled the Strings

It helped, too, that the government was largely controlled by merchants whose understanding of the importance of credit, budgets, and the timely repayment of debt was bred in the bone. Another consequence of merchant government was that state overhead remained low, a condition that eased the burden of debt service.

By contrast, the great wealth of Spain was never enough to meet its huge commitments. The gold and silver from America was so heavily pledged to Genoese and German bankers (later ruined by the ultimate Spanish default) that Spain itself was reduced to a copper currency.

The real problem was that Spain lacked a system of public finance immune from the royal tendencies to grant tax-sheltered monopolies, to tax everyone else unpredictably and arbitrarily, to suspend interest and principal payments at will, and even to declare bankruptcy, as Spain did for the first time in 1557.

Worse yet, in an absolute monarchy where the nation is, by definition, an extension of the kings's household, there is far more incentive for the wealthy to purchase offices and monopolies from the crown — and to transfer wealth abroad — than to accumulate liquid wealth at home available for impersonal investment.



Bettmann Archive

These bad habits meant that Spain depended heavily on external lenders, at much higher cost than Holland had to pay. On top of this, the Inquisition, then in full flower, managed to drive away most of the nation's merchant class, the very source of renewable wealth that Holland enjoyed in abundance.

In the next century, London began to rival Amsterdam as the world's financial power, and finally erected the capital markets edifice — building on Italian and Dutch models — that the rest of the world would copy in the following century. For a start, English finance benefited from a powerful merchant class that helped Parliament dismiss James II, the last of the Stuarts, in 1688.

This step forever deprived the English monarchy of fiscal authority, henceforth vested in Parliament. It helped too that William III, the Dutch prince who succeeded James, brought Dutch principles of public finance to London.

The relative trustworthiness of the capital market in London — like Amsterdam — attracted both domestic and foreign savings seeking impersonal investment opportunity. Finally, strong overseas trade and the first stirrings of the factory system of production created the domestic liquid wealth needed to bear an affordable tax burden and to finance and service war bonds. It was this rapid creation of wealth, in fact, that let England emerge financially unscarred after 1815, ready to fund domestic and foreign investments for the next century.

France, though the largest continental power, suffered from many of the same problems that blocked Spanish finance. These were a divinely ordained monarchy, with the power to suppress opposition; a hated and corrupt apparatus of taxation; a trade-damaging system of internal customs collection; financial incentives that encouraged the wealthy to purchase offices and monopolies rather than to create a flow of liquid savings; and the flight of capital to more secure money markets, notably Amsterdam and London.

Unlike Spain, however, France enjoyed a degree of domestic savings invested in war bonds, although the rates paid were always higher than in London. The 1789 revolution, however, damaged public credit until the early 1800s.

As the costs of war rose during the century, the English financial advantage became ever more critical. This is made clear in the accompanying table, adapted from Paul Kennedy's study.

Three points stand out. First, England was at war for 65 out of 127 years in the period 1688-1815. Second, the annual cost of war rose steadily from five million pounds in the late 1600s to 75 million pounds a century later.

Third, England was able — through taxes and loans — to self-finance its war debt, even after 1780 when Holland became a French ally and withdrew financial support from England.

Finally, English war bonds were issued during the century at rates ranging from 3% in 1751 to highs of 9% in 1711 and 7% in 1782. The average yield on the 3% consols of 1751 was about 4% during the remainder of the century.

The relative resiliency of the French and English systems of public credit in the early 18th century is revealed by the conduct of both governments on the occasion of simultaneous outbreaks of "paper money madness" — one in Paris, the other in London, both beginning around 1718 (quite by coincidence) and culminating in 1720.

In Paris, John Law, an exiled Scot, brilliant professional gambler, and amateur economic theorist, persuaded the credulous Duke of Orleans (regent of France following the death of Louis XIV) to do two things: first, to establish a central bank to issue its own notes, and second, charter the Mississippi Company that would reap riches by trading with Spanish America.

The trouble with the first idea was that the regent liked it so much he ordered the issuance of far too much paper against totally inadequate coin reserves. A panic followed when the royal bank refused to honor its notes with coin.

Matters did not improve when the crown then authorized informers to collect silver and gold from households. This was followed by a 50% devaluation of the paper. No wonder there was a cross-border flight of gold and silver, and a subsequent distrust of paper money and banks.

Scottish banking was the principal model upon which English country banks and, later, the American banking system were based.

The trouble with Law's second idea was that the American trading opportunity was grossly misrepresented to French investors, so that the huge and very fashionable speculation soon proved worthless, with widespread financial ruin aggravating the currency crisis.

In England, another fraud — the South Sea Company, chartered by Parliament — led to a similar frenzy of speculation and ruin. The damage, however, was contained by the prompt action of Parliament.

Restitution was demanded and collected from the personal estates of South Sea directors, a liquidating dividend was paid to all shareholders, the company's debts were honored in full, and its receivables from the public were cancelled. These Parliamentary actions calmed the public, preserved the currency, and restored public credit.

"Enterprise, like Icarus, had soared too high, and melted the wax of her wings; like Icarus, she had fallen into a sea, and learned, while floundering in the waves, that her proper element was the solid ground. She has never since attempted so high a flight."

(From Charles Mackay, "Extraordinary Popular Delusions and the Madness of Crowds." London, 1852, p. 88.)

It is worth noting that the development of English commercial banks in this era was stunted by the note-issuing monopoly granted by Parliament to the Bank of England in 1694. This monopoly was in return for the willingness of investors in this private bank to subscribe war bonds.

Meanwhile, Scottish banking flowered in the 18th century, beginning with the first commercial bank charter in 1695. Scottish bankers soon developed a competitive, market-driven, innovative, and self-regulatory system — with very few failures — that financed industrial growth in the north more efficiently than England could manage. Scottish banking, in fact, was the principal model upon which English country banks and, later, the American banking system were based.

Why Banks Fall

In the preceding section, I have emphasized the rise of capital markets, rather than banking systems or individual banks. They are not quite the same, of course.

London, for example, became a worldwide hub of finance without the benefit of large commercial banks. In general, however, savings, investment, and the institutional structure that connects the two all occur together.

Do they fall together? We can begin to answer this question by first isolating the factors that encourage the development of financial systems. I see five such factors.

First, there must exist a base of successful trading and manufacture to generate a surplus of wealth, in a form that turns into cash fairly often. Second, there has to be a financial market, an institutional structure of banks, dealers, brokers, and arrangers that mediate liquid wealth into rational and reliable investment.

Third, there has to be a deeply established public belief that the game is not too rigged, that dishonesty is accountable, and — most important — that government is constitutionally restrained, especially in its power to tax. To the extent, in fact, that an economically rational elite is not in charge, savings will flee the market, just as Spanish and French savings fled to Amsterdam.

Fourth, there needs to exist a commercially favorable public infrastructure to include reasonable degrees of equitable and predictable (not necessarily low) taxation, a fair and accessible system of justice, universal education, affordable insurance on all manner of commercial risks, a postal system, a coast guard, roads and bridges, and the like.

Dissent Must Be Tolerated

Finally, there must be a widespread public ethos in favor of commercial goals and values, coupled with reciprocal values that stress the responsible exercise of business power. This economic ideology, I hasten to add, can only be effective when it is disciplined within a wider intellectual climate that promotes the arts and sciences, and tolerates dissenters as well. The economic importance of such a climate, of course, is that it nourishes the spirit of inquiry and experimentation which is at the bottom of the creation of wealth.

To the extent nations have met these five tests, they have produced large, influential, and world-class banks. When nations falter, however, there is no iron determinism that says their banks must decline as well.

The linkage, in other words, between national performance and bank performance is not a close one. Britain and its banks provide an example.

Though the nation itself has been in relative economic decline since 1946, its largest bank, National Westminster, has emerged as a worldwide presence whose stature, soundness, and profitability make it a force to reckon with. A contrast of a different sort is presented by the histories of Standard Chartered Bank and Hong Kong Shanghai Bank. Both were British-chartered in the 1860s to serve colonial financial needs.

The one was to be based in London, then the center of Empire, while the other was to be headquartered in the Far East, close to the colonial marketplace itself. The relative fortunes of these two banks in recent decades seem to illustrate the importance of domicile in fostering the prosperity and momentum upon which banks thrive.

It also illustrates the importance of locating a bank's decision-making as close as possible to where the needs of its customers are determined. For colonial clients in 1900, London was that place; in 1988 it is not.

The contrast between Hong Kong and Standard Chartered may also say something about management. But since I am not a close observer of these two banks I can't document this difference.

What I do understand, from many years of direct observation, is the management factor in U.S. banking. This experience has taught me over and over again that management — the ability to guide and control a business — is the real key to the success or failure of banks.

And our banks have had more than their share of both. We seem to produce a fair number of excellent banks whose practices are studied and copied far and wide, not only in this country but abroad. We have also witnessed too many failures and near failures, beginning in 1974. This has not happened because of economic hard times (which only make things worse), but because of a peculiar pathology that seems to destabilize a small fraction of U.S. bank management, leading occasionally to crisis.

To describe this lurking disease (to which most of our bankers, I believe, are immune), I will practice some amateur sociology upon you. We are dealing, after all, with a recurring pattern of executive behavior, not merely with aberrant personalities.

Such an analysis, furthermore, allows us to think about remedies more plausible than aptitude tests or group psychotherapy for bank chairmen. Besides, it's fun to indulge our American pastime of characterizing distinctive cultural and organizational styles. Since we do it about English, Japanese, and Swiss bankers (among others), why should Americans get off without the same treatment?

I want to begin with the observation that our banks — large and small — exited the cautious 1950s with highly authoritarian command structures that would make the military blush. There were four reasons for the paternalistic despotism of bank chief executives in that era.

First, the prevailing banker goal during the three decades following the trauma of widespread bank failure in 1933 was to build impregnable fortresses of soundness and to say "no" to virtually all other ideas. One consequence of this negative thinking was to discourage initiative from within, and to concentrate power in the hands on the "old man who saved the bank." The social contract in banks of that era,

Series SM-1993-J Cusip No. 313586 ZM 4
Non-Callable

Price 100%

The debentures are the obligations of the Federal National Mortgage Association, a corporation organized and existing under the laws of the United States, and are issued under the authority contained in Section 304(b) of the Federal National Mortgage Association Charter Act (12 U.S.C. 1716 et seq.).

The debentures, together with any interest thereon, are not guaranteed by the United States and do not constitute a debt or obligation of the United States or of any agency or instrumentality thereof other than Fannie Mae.

This offering is made by the Federal National Mortgage Association through its Senior Vice President-Finance and Treasurer with the assistance of a nationwide Selling Group of recognized dealers in securities.
Debentures will be available in *Book-Entry* form only.
There will be no definitive securities offered.

Gary L. Perlin
Senior Vice President-Finance and Treasurer

Linda K. Knight
Vice President and Assistant Treasurer

3900 Wisconsin Avenue, N.W., Washington, D.C. 20016

This announcement appears as a matter of record only.

in other words, traded job security for subservience.

Second, the prestige and the self-importance of such leaders was fed — beyond that of other corporate chiefs, even of larger businesses — by their unique knowledge and control of the communities they dominated. In a time when "relationship banking" was a privilege, not a commodity, long before borrowers learned to confuse bankers by ignoring them, the chairman of almost any bank was a larger-than-life figure, to be feared as well as courted.

Formidable Personalities

Names like Edward Eagle Brown (First National Bank of Chicago), William S. Gray (Hanover Bank of New York, my first employer), and Edward Byron Smith (the Northern Trust Company of Chicago) are just a few reminders of the tyrannical personalities of yesteryear. At the same time, men like these created a lasting image of the executive function in American banks. In the wrong hands, as I shall soon point out, this model can prove destructive.

Third, we have to look even further back in history to find the roots of our innocent belief in heroes. I'm afraid we are prone to this belief, egalitarian rhetoric to the contrary.

A simple insight is presented by the history of American place names, across 250 years of settlement. The first colonists of New England — frightened, brave, and collective — named their communities after "home": Plymouth, Hartford, Framingham, Worcester.

Over the next two centuries, the emerging individualism of Americans created a hybrid place name: Thomasville, Barryville, Galesburg, Pittsburgh. The founder's name was attached to an old-country suffix.

After the Civil War, the cult of individualism intensified to the point where the European suffix was dropped altogether! To illustrate, in the American Southwest (mostly settled after 1865), place names became a characteristically bald tribute to the ego of some long-forgotten founder: Gallup, N.M.; Roswell, N.M., Winslow, Ariz.; Cameron, Ariz.; Prescott, Ariz.

By contrast, Spanish names for the same or adjoining places were characteristically religious: Tes Marias, Vera Cruz, San Antonio. American Indian place names typically summarized topographical features with no reference to personality.

Here are some examples drawn from Navaho: Cottonwoods in a Circle, Ariz.; Water Springs from a Cleft, N.M.; Parallels Stretch Across — a reference to the bridge at Gallup, N.M. This principle of impersonal naming, curiously enough, comes full circle, for it most resembles early English names: Oxford, Sussex, Worcester, Plymouth.

The fourth and final cause that I see behind the traditional authoritarianism of U.S. banks is rooted in the fact that dynasty is the sequel to individualism. The successful 19th-century founder of an American mill, a town, or a bank created a family asset that could be strengthened through intermarriage and passed on free of taxation.

Though a few banks originated as partnerships or syndicates (Morgan, Bank of New York, Brown Brothers), most American banks were founded and managed by families. This is documented in a remarkable 1962 study prepared for that scourge of banking, Rep. Wright Patman, D-Tex.

Dynasties Revealed

The study forced the unprecedented disclosure of the largest 20 stockholders of each of the nation's largest 200 banks. It showed the continuing and pervasive control of large American banks by local families: the Harris and Smith families in Chicago, the Kempers in Kansas City, the Frenzels in Indianapolis, Fishers in Detroit, Rockefellers in New York, and so forth.

Since these dynasties were invariably influential in their communities, it is not hard to understand the power wielded by the bank chief, whether a family member or a proxy for the family, both inside and outside the bank. Because of the family roots, moreover, it is easy to understand how management principles could develop without a system of checks and balances on the exercise of power.

> The squat man with cigar ashes on his vest no longer stands a chance, regardless of merit.

For these four reasons, then, the power of the U.S. bank chief executive officer was shaped by images and expectations that led to authoritarian management as a norm. This may have been appropriate to a Depression and post-Depression era when the reflex of the chief was to say "no."

That generation was finally discredited during the expansionist 1960s. Who needed musty fossils to guard fortresses that the world no longer cared to besiege? The new generation wanted to say "yes."

What the fossils bequeathed to their successors, however, was a command structure that gave far too much power to one man. What were the influences that would now begin to shape the "yes" generation of bankers?

In part, there was a careerist inducement to build some fun back into banking. The danger was past, and the John F. Kennedy administration was actively encouraging a much freer spirit toward bank growth, competitiveness, and accommodation. Those who heard the message were in the national mainstream. Snow White would not only be revived but wedded by the Prince of Entrepreneurship.

Second, the institutional stock market began to discover bank stocks in the early 1960s, establishing for the first time a relentless dialogue between investors and management that came to have a profound effect upon the latter. As a bank stock analyst during the entire decade, I was able to see at first hand how managements reacted to the siren songs we sang about earnings-per-share growth and price-to-earnings ratios.

Many remained coldly oblivious — Morgan Guaranty and National Bank of Detroit, for example — maintaining that their business was to run a bank, which analysts could take or leave. By 1970, however, most of the largest 100 banks had come to recognize the many benefits of a high stock price, to meet corporate and personal goals, and were

NCR ATMs. BECAUSE WE FIT IN WHEREVER YOU PLAN TO GROW.
Shown: 5085 ATM with 5285 Commercial Depository.

beginning to fashion an active initiative toward analysts.

Prestige within community and industry circles became a strong factor reinforcing this new fashion. Bankers and their directors wanted to be seen as shedding the cobwebs of a Depression management style.

Lure of the Limelight

They wanted to be admired as business leaders, not as bankers who said "no." What better mark of distinction in this new environment than to enjoy a high price-earnings ratio and to be able to flash a recent research report written by Merrill Lynch or Goldman Sachs?

A trend-setting event shaping this evolution of attitude was the so-called investor relations dinner held by Citicorp in October 1971. Its purpose (illusory, as it turned out) was to break the shackles that bound Citicorp stock to the rest of the bank stock market.

For Citicorp stock to take wing, Walter Wriston personally reasoned, bank stock analysts must be deliberately excluded from the invitation list, in favor of equity research directors, stock portfolio managers, market economists, and others who might appreciate the message that Citicorp was really another Xerox.

The important promise of the evening was Mr. Wriston's personal commitment to pursue an earnings-per-share growth target of 15% annually. In the next few days the stock surged relative to other bank stocks.

The precedent set by Citicorp's dramatic evening further unsettled the weaker heads out there in the banking industry. Analysts began to hear similar promises being made, as though this was the only way to get attention.

Worse yet, too many managers started to believe in these commitments, undertaking whatever policies were necessary to meet such earnings-per-share growth goals. One of these policies was management by objective, a nice-sounding idea (why shouldn't one have goals at work?), but one easily abused to produce whatever loan volume would generate the required earnings growth. In these cases, bank strategy became the slave of rapid EPS growth, with no quarterly interruptions permitted.

Too many "essential" banks have been weakened by excesses and misdirection over the years.

To be fair, we should recognize the counterargument that a ruthless competitive environment requires a bank to shave spreads, do deals, introduce new products, build market share, and promote a high stock price. My answer, perhaps yours as well, is that the first duty of a business called a bank is to justify the trust of its funds providers. A bank's second duty is to secure its long-term survival. The duty to build quarterly earnings-per-share for the benefit of the institutional stock investor should rank below these two prime goals.

The allure of stock price was not the only siren song to tempt the new generation of bankers. The other Lorelei was the emerging need of the business press — *Fortune, Forbes, Business Week,* among others — to create readership by featuring personal profiles of executives in articles and photographs.

The executives themselves, of course, become instant celebrities, at least at home. Since many of these stories are promoted and guided by company-paid public relations advisers, the new trend meant that the publicity policy of many a business (including banks) would emphasize the celebrity nature of its CEO. Here is a man who, if asked, is available and fit for talk shows, interviews, photo opportunities, and other media events.

Vanity, Thy Name is Publicity

All this leads to vanity, of course, which is itself dangerous. It contributes as well to two other damaging consequences.

One of these is the trivialization of the leadership selection process. As in national politics, there is a selection bias in favor of the executive who is trim, photogenic, and popular with analysts and press. The squat man with cigar ashes on his vest no longer stands a chance, regardless of merit.

The other damaging consequence of celebrity is executive isolation. The new celebrity is too often cut off from corrective and constructive dialogue with directors and subordinates. Fame, however spurious, creates remoteness.

Finally, the combination of vanity and isolation is a dangerous mixture when coupled with corporate goals driven by earnings-per-share growth and stock price performance. In a management climate corrupted by these factors, there is no room at all for a loyal opposition, whether on the board of directors or among the senior subordinates.

Such a bank is unconsciously patterned after a divine-right monarchy, not a merchant republic. The competitive odds, I think, still favor the latter, as in the 17th century.

Bob Abboud describes in detail how this evil alchemy worked at First Chicago, corrupting the incorruptible toward the funding crisis of 1974-75 that earned him his chairmanship. A tyrant himself, he had the presence to say "no" to growth in favor of survival.

Each large American bank in crisis since 1974 has had its own particular management history, which I will not recount here, but in all of them were present the incendiary ingredients I have tried to summarize here.

As far as I can tell, European, British, Japanese, and other international banks are managed according to very different principles. For whatever historic or cultural reasons (I will not trouble you with my guesses), you seem to have a deep and universal reliance on collegial management.

What do I mean by this? For one thing, it means that such banks require a high degree of consensus in order to change course, enter a new market, commit to a large credit, and so forth. It also implies a high degree of organizational and career continuity, rarely interrupted by senior resignations or firings, or staff reorganizations.

It means an inward orientation of the top management, who externally remain somewhat anonymous. Finally, as Steven Davis points out from his interviews with "excellent" banks, the collegial style at its best tolerates the pres-

Inside, outside, across a parking lot or across town. ATMs are springing up everywhere these days. Because people are demanding their convenience in more places.

And nobody makes it easier for you to fit in those places than NCR. With the largest choice of ATM products and widest array of function options that you'll find anywhere. All designed to serve a wider variety of locations without narrowing your service offerings.

Like the Slimline 5088 Terminal. Fits comfortably on a narrow drive-up island. As a space saving stand alone in a parking lot. Or against a wall for retail and shopping mall locations.

And the 5070 Interior ATM. Perfect for vestibules, office complexes or any interior location.

Or any of several full function through-the-wall models. Just right for replacing aging ATMs or expanding to new sites, including walk-up, drive-up and vestibule.

There are other NCR ATMs too, but the point is we'll go where you need us to. On site or off. While always giving you the flexibility to fine tune the services you want to offer at each location.

From simple cash dispensers to full and extra function machines with commercial depositories, document/statement printers and more. We have the options so you have a choice.

Of course, some characteristics are standard equipment on every NCR ATM. Things like reliability that's so good we offer to guarantee it to 98%. Compatibility that integrates easily with ATMs from other vendors. And one of the biggest, most responsive service organizations in the business.

So as you make your plans to grow, plan on NCR. Phone us at 1-800-CALL NCR to learn how we can help your plans work out. Because, wherever you're going, we'll fit in.

ence of a loyal opposition. A senior or junior officer who presents a reasoned case for a different course of action is not penalized for "defying the will of the chief" (as too often happens here).

More Than Just Another Business

If banking were just another business, like shopping centers or commercial laundries, the foregoing discussion would be nothing but sociological trivia. The trouble is that there is a public interest at stake. This is true even in the absence of Federal deposit insurance.

Large banks — whether Swiss, Swedish, or American — are keepers of their nations' savings, the stewards (usually) of payments systems, occasional stabilizers of capital markets, and symbols of national responsibility. Measured against these awesome functions, deposit insurance is redundant. Yet some chief executives here seem to have taken for granted the Federal safety net and use the too-big-to-fail theory to underwrite irresponsible bets.

It's as though government subsidy has altered the balance that should desirably exist between greed and fear, the capitalist emotions. Central banking and deposit insurance, with the best intentions, have diffused the fear, but left the other unchecked. This proves, at least to me, that the soundness of banks is ultimately dependent not upon government but upon the character, professionalism, self-discipline, and economic ideology of the managers of banks.

I'd like to conclude by raising five questions. What does debtor-nation status, now a reality for the U.S., mean for U.S. banks? What is the outlook for our money center banks?

What might happen to the perceived value of federal deposit insurance, with what consequences? What opportunities are present here for non-U.S. banks? Finally, what challenges do foreign banks face that may threaten their present comfort?

Debtor-Nation Status

Britain was the world's chief creditor nation during the 19th century. The U.S. succeeded Britain for most of the 20th century, and Japan has since emerged as the world's largest creditor while our country has plunged into international deficit. My reading of the work of economists persuades me that the U.S. will remain in deficit indefinitely, despite improvement in our balance of trade.

What does this mean for banks? Judging from history, creditor status conveys three advantages upon the internationally competitive banks of a nation.

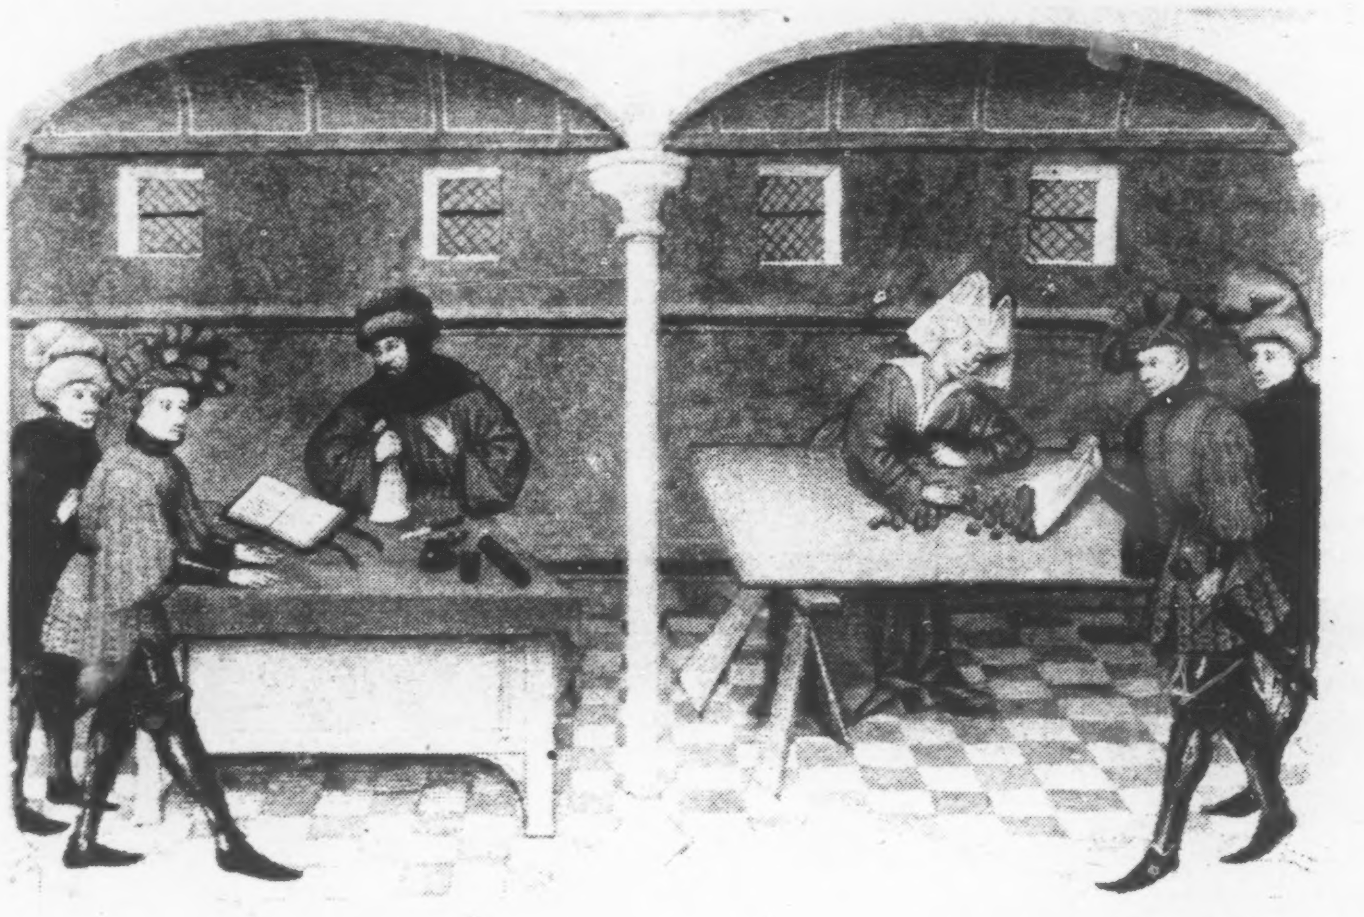
First, it means relatively low-cost funds and capital. The savings surplus is so huge that it is satisfied by relatively low yields. Meanwhile, long-term investment opportunities attract a further surplus that competes to lower the cost of business capital.

This was true in Britain in the 1840s, as accumulated wealth from textile manufacture sought investment in railroads. The same seems to be true today in Japan. Savings interest rates, government bond and corporate stock dividend yields are so low as to point to very favorable costs of capital.

Second, the volatility of funding and capital costs may very well be less in a creditor nation than in a debtor nation, since the latter is more economically and financially dependent upon others.

Third, banks in a creditor nation benefit from their intimacy with the businesses that are making big direct and portfolio investments abroad. These ties create opportunities that debtor nation banks tend to miss. Such banks, like good restaurants near major intersections, enjoy a strong and natural traffic.

By contrast, debtor nation banks (according to this view) suffer from a relatively high cost of internal capital (however slight the difference), a relatively deficient flow of savings, perhaps a greater volatility of funding cost (with all that this means for sure-footedness), and a relative absence of customer opportunity. Thus France and the U.S., for example, had slightly higher levels of interest rates than prevailed in London.



Bettmann Archive

The U.S. did become the world's creditor after World War I, but the prevailing sense of international isolation ("no entangling alliances") suggested few of the financial opportunities that Britain had seized early in the previous century. To remind you of that magnificent passion, let me quote from the song of the directors of the Fidelity Fiduciary Bank in the movie "Mary Poppins", as of 1900: railways through Africa; dams across the Nile; fleets of ocean greyhounds; majestic, self-amortizing canals; plantations of ripening tea.

By contrast, American banks and merchant bankers were too busy, for most of the era, surviving the Depression and financing World War II to take advantage of the international opportunity this nation enjoyed. To be sure, Citibank, Chase, and Bank of Boston built local banks here and there (my cousin audited Citibank's branches in Japan in the 1930s). And Morgan Guaranty decided as early as 1962 to become a major international presence.

The second chance for most other large U.S. banks came rather late in the game. During the 1960s, the flood of dollars owned abroad created an offshore market that the New York banks helped to develop and lead. By the end of the decade, dozens of American banks (from New York, San Francisco, Chicago, Dallas, Detroit, Philadelphia, Charlotte, among others) had "opened in London."

For most of these banks, the post-1960s internationalization was too shallow to be sustainable. In recent years, of course, the offshore bridgeheads have been largely dismantled: D-day turned into Dunkirk.

Is this because the original internationalization of U.S. banks in the 1960s was a kind of "imperial overstretch," a collective strategic error? Or is it because the tide of worldwide capital flows began to turn against this country, or some combination of both?

Part of the answer lies in recalling the difference between National Westminster and Standard Chartered, two banks chartered by a nation eclipsed by the rise of the U.S. One emerges as a worldwide giant, the other struggles to maintain its independence.

This analogy suggests that our nation contains some survivor international banks, but also suggests that we may have a surplus of such banks. If so, it will be because our new financial disadvantage relative to creditor nations (Japan, Switzerland, Germany, the U.K.) will gradually deprive our international banks of the reliable, recurring profitability necessary to maintain all of them as independent entities.

How are the excess banks to diminish? There are four paths, I think, few of them plausible. One is to acknowledge defeat gracefully and shrink from worldwide to regional status, much as Bank of America has done.

This path is easier to follow if you have always been the largest banking presence in California. It is much harder if you are a New York City giant whose local core of funding and lending is relatively insignificant. Your local justification doesn't exist!

The second path is to seek one's own dismemberment — the sale of this affiliate, that department — in the hope that you can gain a soft landing as a piece of your former self.

A third path is to seek an acquirer for the whole bank, an unlikely prospect (I think) unless the pieces are first put up for sale. The fourth alternative is to deny reality by continuing a too-aggressive strategy in the face of declining stature and creditworthiness.

This course of action, at worst, may result in failure and nationalization (as Continental was nationalized). One thing is clear, at least to me: The competitive position of money center banks appears generally to have become so weak today that perhaps half the group will cease to exist as independent entities within a few years.

Who will acquire all or part of our surplus of international banks? My answer is twofold: foreign banks and American superregionals. A small example of the first path is the 1986 purchase of Schroder Bank by Industrial Bank of Japan. There is as yet no example of the second.

The Federal Deposit Insurance Corp. was never designed to stretch its coverage of bank failure beyond the insured amount (now $100,000 of deposits). Yet in 1984 a precedent was established, in the case of Continental, by which the FDIC now stands behind all the obligations of essential banks.

At best, the FDIC may seek to finance new ownership of an otherwise doomed bank (First City National of Houston). At worst, a large bank in crisis for which there is no buyer will be nationalized.

What is meant by a bank too big to fail? In one sense, it is a bank whose domestic and cross-border continuity is essential, in order to prevent business breakdown and to defend the worldwide image of American banking as an international resource lying behind our "key currency" status.

In another sense, a bank too big to fail is simply any bank whose affairs are simply too complex to be liquidated. Since the largest 200 banks in this country clearly fall in this category, the credit of the FDIC is quite over-committed.

It would be reassuring to be able to argue that the national commitment to banking continuity is such that the FDIC is irrelevant since all large-bank obligations (to the extent necessary) would be automatically honored by the U.S. Treasury. The trouble is that there are only a few press releases — no statutes — outlining the federal commitment. Further, Congress, upon which any contingency plan must depend, will predictably shy away from legislation until some crisis is truly at hand, with unpredictable consequences.

My point is that the rational holder of claims against large U.S. banks will increasingly look to the creditworthiness of those banks themselves as a bulwark of safety, and will depreciate the role of government as an immediately reliable shield. As this happens, the transition is apt to be painful.

Too many "essential" banks have been weakened by their excesses and misdirection over the years. The signs of this are readily at hand: not only have many of our money center banks been steadily downgraded since 1982 by Moody's, Standard & Poor's and other rating agencies, but — worse yet — the secondary market in money center bank holding company subordinated notes shows yields of 60 to 80 basis points over comparable-maturity Treasuries.

At these spreads, the market is consigning the banks' securities to "junk" status. This is hardly a corner of strength from which to battle the new challenges arising from our debtor status.

It seems to me, from my limited study of leading Japanese, English, Swiss, and other offshore banks, that many of you enjoy a tremendous opportunity in this country. For one thing, you are largely core-funded in your domicile nations.

For another, you often seem to be protected by oligopolistic pricing prac-

THE MIDWEST

Rust Belt Recovery, Mergers Refuel Bank Stocks

➸ Continued from Page 3

The revival of the Rust Belt economy is due in large part to the benefits of the declining dollar and the boost it provides to the Midwest's agricultural and manufacturing base. The strong domestic economy also helps.

With the recovery now intact, banks are enjoying growing loan demand and much improved credit quality. For example, the 19 Illinois banks tracked by Mr. LaManna at William Blair had a 7.3% median gain in earnings per share for the first quarter of this year. The median level of nonperforming loans at the quarter's end for those banks was 0.72%, down from 0.76% at yearend 1987 and significantly better than the industry average.

Among the banks followed by Mr. McGinnis at the Milwaukee Co., interest margins declined slightly in this year's first quarter to 4.59% from 4.65% during all of last year. But Mr. McGinnis believes the decline resulted from a new accounting standard, FASB-91, that took effect at the beginning of the year.

FASB-91 requires that fees on loans be realized as income over the term of a loan. Under the previous accounting method, loan fees could be realized as interest income in the year of the loan's origination.

"Although net interest margins appear to have declined in the first quarter, we believe that, net of the accounting change, there was an increase," Mr. McGinnis wrote in a report dated May 24. "This increase is the result of the improving fundamentals of the midwestern economy."

Midwest bank stock prices have also been rising because the continuing trend toward mergers and acquisitions has built a takeover premium into many of them. In his May 20 report, Mr. LaManna wrote, "This year's superior performance of Illinois bank stocks relative to the market and other NASDAQ-traded banks nationwide is at least partially attributable to their investment appeal as takeover candidates."

While bank mergers and acquisitions in the Midwest have slackened a bit since the October stock market crash, the consolidation phase continues. And Mr. Stieven believes the phase could continue for five more years.

The Milwaukee Co. tracks the performance of five Wisconsin bank holding companies and three more that are headquartered outside the state. Last year, over 22% of the Wisconsin banking assets followed by the firm were the target of industry consolidation.

Mr. McGinnis believes that banks are making acquisitions as a takeover defense. That is, if a bank is large enough, it may be able to decrease its potential to become a takeover target.

Too Many White Knights

But don't expect a lot of hostile takeovers, Mr. McGinnis said. Hostile attempts are prone to fail because "in the banking industry there are just too many potential white knights." Moreover, hostile attempts can distract employees and customers of the banks, and that "acts as a significant deterrent to hostile takeover attempts in the industry."

The Midwest does have some regional banks that would make attractive takeover candidates. Mr. McGinnis' list of potential targets includes:

- Citizens Banking Corp., a $2.3 billion-asset company in Flint, Mich. The company was selling at a discount to book value in late May.
- First Interstate Corporation of Wisconsin, a $1.5 billion-asset bank holding company based in Kohler, Wis. The company's largest shareholder is pushing management to sell the bank holding company. Unless earnings turn around, "it is possible that the company could be a takeover target."
- First Midwest Bancorp, a $1.6 billion-asset bank holding company in Naperville, Ill. The company is based in suburban Chicago, the most attractive banking market in the Midwest. "There are only a limited number of possible takeover candidates in the area, of which First Midwest is one."
- First Wisconsin Corp., Milwaukee, the largest bank holding company in Wisconsin. The $6.9 billion-asset holding company has made acquisitions in Chicago and Minneapolis. In mid-May, the stock was selling at 7.5 times estimated earnings. That was one of the lowest levels among the banks followed by the Milwaukee Co. "Fundamentals are improving, and at current prices the company would have to be considered a very attractive takeover candidate."
- Marshall & Ilsley Corp., Wisconsin's second largest bank holding company, with assets of $6.4 billion. The Milwaukee-based company has an attractive franchise that produces good returns for shareholders. "They appear to be an ideal acquisition target" even though Marshall & Ilsley may become a superregional. ■

S&L Execs See Political Ploy in FSLIC Payout

➸ Continued from Page 1

sheet was $13.7 billion in the red because of the projected costs of closing some 400 problem thrifts.

Roger Martin, a Federal Home Loan Bank Board member, on Tuesday denied the liquidations had any political overtones. "We have a priority list of the institutions that we must deal with, and these two just rolled out. There was no consideration of the political aspects at all," Mr. Martin said.

The decision to liquidate the two thrifts was born of a desire to help reduce the premiums thrifts must pay for deposits, he said. American Diversified and North America had been paying interest rates 145 basis points more than the national average. Since last March, the Bank Board has been working to reduce the deposit premiums paid by insolvent thrifts, particularly those in Texas, Mr. Martin said.

"We have reduced the Texas premium alone almost 60 basis points," he said. "This has been done through work we've been doing through the institutions, plus the closings." He noted that the first eight institutions closed under the Bank Board's Southwest plan were institutions with a high cost of funds.

"As a matter of fact, out of the next 30 that will be dealt with in Texas, 18 have a high cost of funds," he said. A reduction of 10 basis points in the cost of funds would have a salutary affect on the industry's profits, he said.

"It is almost $1 billion a year in pretax profits to the industry," he said.

Bert Ely, a thrift consultant based in Alexandria, Va., concluded the Bank Board had no alternative but close the two California institutions. Six other S&Ls with assets of more than $450 million each fit the profile of the two California thrifts, he added. These high-rate-paying institutions have few local depositors, relying instead on brokered deposits from investors in other parts of the country.

Mr. Ely said his analysis showed that the two California thrifts relied more on brokered funds than any other institutions in the country.

As of Dec. 31, the average insured deposit account at North America was $84,010, compared with a national average of $7,345, he said.

American Diversified's insured accounts averaged $80,807.

"That's 10 times the industry average," he said.

Mr. Ely said many insolvent thrifts are getting more of what he calls "mini-jumbos," or brokered deposits in the $80,000-to-$90,000 range. This indicates that money managers placing funds in institutions with high rates are making certain they have insurance coverage for their principal and interest.

The six other institutions Mr. Ely referred to have insured accounts averaging from $30,538 to $58,366. Two of the S&Ls are in California, and the remaining four are in Texas. "What's finally come out here is that it takes cash to do these deals," said Mr. Ely.

Liquidations Called a 'Bold Move'

James Butera, congressional lobbyist for the National Council of Savings Institutions, called the California payout "a bold move." But he said he was shocked by the resolution costs.

Assets from the two liquidated institutions will be managed by the FSLIC.

A spokesman said none of the assets would be managed by the Federal Asset Disposition Association, a quasi-governmental agency created by the Bank Board in 1985 to aid the FSLIC. Some members of Congress are trying to legislate the asset disposition group out of existence and have asked the Bank Board to avoid entering into new relationships with the organization.

White House spokesman Marlin Fitzwater said on Tuesday that estimates as high as $50 billion on the cost of bailing out the thrift industry are wrong.

Asked if a taxpayer bailout might be needed for the FSLIC, he responded, "Right now, we think the regulatory approach is the right one, using only $10.8 billion of borrowed funds that will be repaid by healthy thrifts under a congressionally approved financing plan." ■

tices at home, further supported by governments that nurture your development and prestige in various ways. Third, to the extent yours are creditor nations, you benefit from the home "traffic" of clients seeking investment here.

Fourth, the leading banks of creditor nations tend to benefit at home from relatively low funding and capital costs. Finally, our leading credit rating agencies, Moody's and Standard & Poor's, have given many of you a boost in your worldwide funding strategy by blessing you with their top credit ratings.

I will single out two hurdles I expect that most of you will have to surmount within the next five years. The first is that your "consensus cultures" — the collegial management style I spoke of earlier — are luxuries that work well at home but are difficult to export.

If you don't bend, you'll have too many of your nationals responsible for important decisions in a country they may not deeply understand, waiting at their desks till late at night for head office approvals. If you do bend, the chances are that your American work force will not fit easily into your management style.

Banks that seem to be solving this difficult challenge include National Westminster, whose large and successful bank here is American-led, and Industrial Bank of Japan, which has left in place the American leadership of Schroder Bank (now IBJ Schroder). Within this country, a bank that has solved a similar problem is First Wachovia, where the widely admired management style of Wachovia Bank has been extended to the very different culture of First Atlanta without loss of momentum or identity for the latter. Such examples, in my opinion, deserve to be studied.

The second challenge has to do with your financial disclosure, a field I think I understand. By and large, your banks do not do an adequate job of informing your creditors, investors and other "stakeholders" of your true condition and performance.

The test is a simple one. Is the financial record of the past presented in a manner — involving both format and substance — that permits plausible projections of future performance?

Analysts like me have been catalysts for over two decades guiding American bank disclosure to fulfill this criterion. Your banks have never been subjected to this steady pressure from an analyst community, and as a result your shareholder reports are not particularly useful as financial documents. ■

Morgan Ponders Software Upgrade

NEW YORK — Morgan Guaranty Trust Co., which has been using much-modified older software from Automated Financial Systems Inc., is negotiating a contract to upgrade to that vendor's AFS Level III Lending System for its commercial loan portfolio.

Thirty-six large banks and thrifts use the Level III Lending System, including 6 of the 10 largest commercial banks and a Morgan Guaranty affiliate. The $1.27 billion-deposit Morgan Bank (Delaware), Wilmington, already uses Level III.

Morgan Guaranty is the nation's fourth largest bank with $45.8 billion in deposits. At the end of 1987, its domestic commercial and industrial loans totaled $3.33 billion, and its domestic and foreign commercial and industrial loans totaled $12.28 billion.

Running on mainframe computers by International Business Machines Corp., the AFS Level III Lending System is an integrated on-line loan accounting package with more than one million lines of code.

It features such functions as multiple accruals of interest and fees on each note, on-line inquiry about customer totals with supporting detail, more than 100 standard report formats, full nonaccrual and chargeoff processing, cash flow forecasting, handling of participations, and a general ledger interface.

The other banks in the top 10 using the system are Bank of America, Chase Manhattan Bank, Manufacturers Hanover Trust Co., Security Pacific National Bank, and Wells Fargo Bank. ■

Stockton Savings Reorganizes

STOCKTON, Calif. — Stockton Savings and Loan Association has completed its reorganization into a holding company, the California Financial Holding Co. The 100-year-old state-chartered thrift unit will continue to operate under its present name. Stockton has assets of $762 million and operates 14 branches in the Central San Joaquin Valley. ■

Poll Finds People Gloomy About Their Financial Future

33% of Respondents Do Not Agree That Reward for Hard Work Is Independence

By LYNN BRENNER

NEW YORK — Americans at all income levels are pessimistic about their ability to achieve long-term financial goals, according to a consumer survey for the International Association for Financial Planning released Tuesday.

One-third of the respondents don't agree that "if you work hard enough you can achieve financial independence."

The survey is the second annual consumer poll and for the second time it was conducted for the association by Reichman Research Inc. Two groups of respondents, representing a cross section of the American public, and a separate sample of households with annual incomes of $50,000 or more, were interviewed by telephone in February.

Consumer pessimism about the future, strongly evident in the 1987 survey, has increased this year. For the second time, both groups of respondents said they are worried about the national budget deficit and the trade deficit. For the second time, 39% of both groups said the next generation will be "worse off," and have fewer financial opportunities than are available today.

This year, respondents added the "threat of a recession or depression" to their list of major economic concerns. Their fears of inflation and higher taxes also increased this year.

Compared to 1987, there is a 50% increase in Americans volunteering that inflation and the cost of living are some of the "biggest economic and financial concerns" facing their households. That concern has more than doubled among Americans in the higher income levels.

People Grow Concerned About Taxes

Taxes jumped this year from fourth to second place is the ranking of household financial concerns. Among higher-income Americans, taxes rank first, tied with paying for their children's education.

Americans at all income levels still rank saving for retirement and for their children's education as their most important long-term goals.

But they're even less confident than last year of achieving those goals. This year, for example, 49% of all respondents said they are afraid of outliving retirment savings — an increase of 17% over the 1987 survey.

"The bad news is a consistent perception that the American dream is fading," said Hubert L. Harris Jr., president of the association. "The good news is that hard reality is sinking in, and people are readier than before to engage in financial goal setting and planning."

Clearly, this represents an opportunity for financial planners. Respondents were asked which of several professionals would do the best overall job of helping clients plan and budget their finances. In reply, 32% of the total public said a financial planner, 25% said an accountant, and 14% said a banker. Attorneys got a 14% vote, and insurance agents and stock brokers each drew only 4% of the vote.

Respondents in the higher income group, when asked the same question, expressed confidence only in the abilities of financial planners (48%) and accountants (23%). Only 5% of upper-income consumers ranked bankers and attorneys as people who would do the best overall job of helping clients plan and budget finances. Insurance agents and stock brokers each drew an even smaller 3% expression of confidence.

Nearly one-third of Americans with household incomes of $80,000 or more use financial planners; 22% of households with income between $60,000 and $79,999 and 18% of households with income between $50,000 and $59,999 use financial planners.

Among consumers who have financial planners, 71% say they are very satisifed, a 7% increase over last year. Ninety-two percent say they are very satisfied or somewhat satisfied.

The increase in satisfaction after the October stock market crash is probably because most financial planners' clients have well-diversified portfolios, said Robert A. Hewitt Jr., chairman-elect of the International Association for Financial Planning.

"Even if they took a hit on October 19, it was only to a portion of their portfolio," he said. These clients were also probably psychologically better prepared for a market crash than the average investor, because planners have educated them to think in terms of economic cycles, he said. ■

Whose Advice Would Consumers Use?

Professionals consumers consider most qualified to manage their financial affairs (base: those who think it would be beneficial to have finances managed by a professional)

Possible Compromise Emerges on Cashing Government Checks

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Consumer groups pushing for legislation to force banks to cash government checks are expressing concern over a possible compromise that would require the checks to be deposited electronically.

"We are very uncomfortable with the suggestion that direct deposit should be the only means of doing government check cashing" for low-income persons who do not have a bank account, said Peggy Miller, a lobbyist for the Consumer Federation of America.

Most likely, such a proposal would link the government check-cashing program to a "lifeline" checking account — an inexpensive, no-frills service. The House Banking Committee is actively considering whether banks should be required to offer lifeline accounts to low-income individuals.

The government check-cashing proposal has become a threshold issue for both the banking industry and consumer groups.

Bankers have resolutely opposed legislative proposals that would require them to cash government checks for people who do not have accounts, warning such measures would open the door to fraud on a grand scale. Of all the consumer legislation being discussed on Capitol Hill, banks are said to oppose most adamantly the government check-cashing proposal.

The Consumer Federation, the American Association of Retired Persons, and other consumer groups argue that low-income and elderly persons without bank accounts are forced to pay fees to check-cashing services that can run nearly one-third the value of the check. The issue is one of a handful that the groups are unwilling to give up on, according to Ms. Miller and others.

The concept of linking government check cashing to direct, or electronic, deposit is only beginning to take form on Capitol Hill, and no sponsors have emerged.

"I have no idea where it came from or who is pushing it," said Ms. Miller. "But I hear about it everywhere I go. Members and staff are asking about it.

"We are very, very worried that they will consider it a compromise between the bank's position of not wanting anything and our proposals," she said.

The Consumer Bankers Association, a trade group that focuses on retail banking issues, is not pushing the idea of direct deposit as a compromise on the check-cashing issue, said Joe Belew, the organization's president.

"I think that the two issues are going to come together," he said. "There is a common ground."

Ms. Miller said low-income and elderly persons often do not trust financial institutions and are unlikely to accept a system that forces them to give up a paper check. If paper and electronic options were offered, however, some might migrate to direct deposit over time, she said.

The consumer groups want banks to cash most government checks of $5,000 or less — exceptions would be made for checks issued by government agencies in other states, for example — for both customers and noncustomers. Banks would be able to require photo identification cards and would be permitted to charge up to $2 for cashing the check.

Bankers Call Safeguards Insufficient

Bankers call those safeguards insufficient.

"First, nobody knows how much it costs to ensure against fraud," said Mr. Belew. "Not all government checks are good. They can be forged too."

Moreover, he asked, "why should this service be forced on banks?"

The postal service, he said, could cash government checks for people without bank accounts. Alternatively, the federal government could agree to indemnify banks for losses from fraud or states could regulate check-cashing services more closely.

Ms. Miller said losses from fraud have been small and could be covered by an average charge of 10 cents per check out of the $2 fee her organization believes banks should charge for government checks.

The General Accounting Office, a congressional watchdog agency, said last month that the federal government issued 559 million checks, with a face value of $621 billion, in fiscal 1987.

The agency said 142,632 of those checks, with a value of $63.7 million, were cashed fraudulently. However, 92,000 of the fraudulently cashed checks involved the spouses of deceased Social Security recipients, and Treasury recovered much of that money.

The House Banking Committee is expected to begin formal consideration of major banking legislation late this month or early in July, and consumer issues are expected to receive close attention.

The Senate already has passed major banking legislation that addresses some of the issues being pressed by the consumer groups. The Senate Banking Committee, however, has begun addressing issues not included in the bill that might come up in a House-Senate conference, including government check cashing.

Ken McLean, the Senate panel's staff director, convened a meeting of banking and consumer groups in a largely unsuccessful effort to obtain a consensus on some of the issues.

A requirement that direct deposit be used for government check cashing was only "one of the ideas" talked about, he said.

Bank of Boston Top Performer Among Nation's Money Centers

By L. MICHAEL CACACE

NEW YORK — The Bank of Boston Corp. was the nation's top performing money center bank in 1987, according to the *American Banker's* eighth annual survey of top U.S. banking companies, published today.

Among regional banks with assets of more than $20 billion last year, SunTrust Banks Inc., Atlanta, was the top performer. Among regional banks with assets of $10 billion to $20 billion, Banc One Corp., Columbus, Ohio, took top place.

The worst-performing money center bank was Mellon Bank Corp., Pittsburgh. The two worst regionals were based in Texas: the $33.2 billion-asset First RepublicBank Corp., Dallas; and the $12.3 billion-asset First City Bancorporation of Texas, Houston.

The *American Banker* survey covers the 51 commercial bank holding companies that had assets of $10 billion or more on Dec. 31, 1987. It breaks these companies into three peer groups: 12 money center banks, 20 regional banks with assets of $20 billion or more, and 19 smaller regional companies with assets of $10 billion to $20 billion. The survey is based on data supplied by Cates Consulting Analysts Inc., New York.

Three key ratios are used in the survey: the return on average assets, the

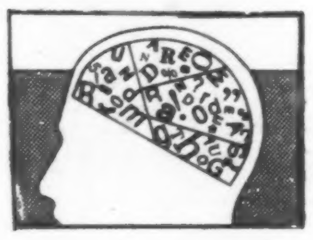
Random Thoughts



By SANFORD ROSE

Most banks say they are in business to maximize shareholder value. Yet, according to a recent survey, the great majority of institutions presently lack the tools with which to achieve this objective.

The typical bank has a mix of high-, low-, and negative-value businesses in its portfolio. Whether a business adds to or subtracts from shareholder value depends on its risk-adjusted return on equity.

In today's market, a business that fetches a risk-adjusted return of 14% or more is very likely a winner, while one that garners a return of less than that figure is probably a loser — i.e., it is actually dragging down the stock price.

Are banks in a position to measure the returns from individual businesses? Apparently not very well, say leading financial executives at 61 institutions recently surveyed by the First Manhattan Consulting Group in cooperation with the Bank Administration Institute.

Respondents at these banks, 13 of which have assets of over $10 billion and 48 have assets of less than $10 billion, were asked to gauge

New Powers Allowed by High Court

Appeal Not Heard; Fed Ruling Stands

By BARBARA A. REHM and JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Commercial banks gained new underwriting powers Monday when the Supreme Court refused to hear a securities industry challenge of a Federal Reserve Board decision to let banks enter the field.

The high court's decision is expected to jolt Congress into action on a banking bill, as the legislators fear losing their policy-making power to federal banking regulators.

"It's obviously good news for the big money center banks, particularly for Bankers Trust and J.P. Morgan," said Lawrence Cohn, senior banking analyst at Merrill Lynch Capital Markets. "They are pure wholesale institutions that have staked their future, to a large extent, on their ability to penetrate the investment banking industry."

After learning of the court decision, J.P. Morgan & Co. on Monday joined an underwriting syndicate led by Merrill Lynch & Co. The deal, which the Morgan group lost in a competitive bid, was to underwrite almost $40 million of Arizona municipal revenue bonds.

Bankers Trust New York Corp. said it "plans to begin immediately participating in the activities made possible by the Supreme Court's decision."

More cautious was Harry Larson, president of Chemical Securities Inc., a

Continued from Page 1

their capacity to measure the risk-adjusted ROE of component businesses, organization units, products, and/or customers. Only 5% said that they are satisfied with the current state of their measurement capacity. Over 50% pointed out that it is either critical or very important to improve this measurement skill.

Lacking the ability to measure profit performance, the respondents find it difficult to allocate resources and equity to the various business units in order to maximize returns. Only 3% of the respondents are confident of their allocational efficiency. Over three-quarters feel the need for significant improvement in this area.

□ □ □

To get sound profitability data, it is first necessary to fully load applicable costs, to assign funds on a matched-maturity basis, and to impute the right amount of equity. Are banks satisfied with the soundness of their allocations in these areas?

About a third of the respondents think they are charging funds users an appropriate amount. Less than that percentage — only about a quarter — are happy with their allocations for back-office, sales-and-service, and credit-administration expense. And a mere 11% think they are imputing equity correctly.

Even more worrisome are the problems in risk adjusting returns. Only 7% of the respondents are pleased with current risk-assessment techniques, while over half acknowledge that it is either very important or critical to improve such techniques.

□ □ □

Comparatively few banks attempt to use fully loaded ROE as the basic measure of profitability at the product level. Since we will soon have risk-adjusted capital requirements, different bank products will require different capital backing, making it insuperably difficult to assess product attractiveness on a purely ROA basis.

Yet the respondents continue to prefer ROA to ROE, and a surprisingly large number confess that they are not even considering measurement systems based on fully loaded ROE with imputed equity.

Thus only 4% of the respondents have an installed and credible system for measuring the profitability of standby letters of credit on an ROE basis, and 64% say that they have no plans to build such a system. Some 16% of the respondents reliably measure the ROE of C&I loans, but over a third still don't think it's important to assess profitability in this fashion.

By contrast, banks seem convinced of the need to gauge the profitability of subsidiaries — e.g., leasing, mortgage banking, etc. — according to ROE. Nearly half feel they have a reliable system in place, and another quarter will shortly bring one on stream.

All in all, however, the picture is not especially encouraging. Banks are not yet in a position to know with the requisite accuracy which of their businesses and products are earning an acceptable rate of return and which are not. They therefore are handicapped in their effort to restructure in such a way as to promote the true interests of their shareholders.

According to Jim McCormick, president of First Manhattan Consulting, these findings tend to corroborate what his firm has learned in its practice. Most banks still don't have the right sort of management information system, but a happy few have broken away from the pack and either have constructed or are constructing the kinds of MIS that will materially aid them in their restructuring initiatives.

□ □ □

Susan Krause, a deputy comptroller of the currency, turned up at a recent American Banker-Bond Buyer conference to review some fascinating statistics. On a net income basis the profits of the banking industry, as is well known, were down over $14 billion in 1987.

But the decline was concentrated in large banks, which provisioned extensively for LDC loan losses. Thus, banks with over $10 billion in assets, which made $5.8 billion in 1986, lost $7.3 billion last year. And banks with from $1 billion to $10 billion in assets saw their profits fall from $6 billion to $4.6 billion.

Smaller institutions, however, did better in 1987 than in 1986. Banks with assets of from $300 million to $1 billion raised income by $100 million, to $1.6 billion, while banks with under $300 million in assets increased their aggregate returns from $3.3 billion to $4.4 billion.

For most banks, profitability stabilized in 1987. The median return on assets, which had been dropping since its high of 1.18% in 1980, inched up from .82% in 1986 to .83% last year.

Factoring out securities profits reveals an even more optimistic picture. Banks took a lot of such profits in 1986, but fewer last year. Net of these profits, the median ROA rose by about 10 basis points in 1987.

Largely accounting for this improvement is the recovery of the agricultural banks. This recovery is reflected in differential regional trends. Although ROAs in the Northeast and Southeast dropped, those in the Midwest — Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota — moved up smartly, from .73% in 1986 to .81% last year. Western banks also substantially hoisted ROAs.

In the central part of the country — Illinois, Indiana, Kentucky, Michigan, Ohio, and Wisconsin — there was a marginal improvement. But banks in the Southwest experienced a decline, from .41% to .37%.

Banking is clearly less profitable than it was 10 years ago, and, additionally, there has been an increase in the dispersion of returns. In 1978, about one bank in twenty-five lost money. By 1987, the proportion of money losers was close to one out of every five.

The top 5% of banks have experienced a steady, though not alarming, drop in returns in the last decade. However, the bottom 5% of banks have seen returns plunge catastrophically. In the early '80s, their losses totaled less than 1% of assets. But by the mid-'80s, the red ink amounted to between 2% and 3% of assets. In other words, while the good banks are somewhat less good than they once were, the bad banks have turned abysmal.

Credit quality, as measured by the median ratio of nonperforming to total assets, improved in every region of the country last year, except in the Southwest. Of particular note is that the nonperformer ratio dropped by 50 basis points in the Midwest and by 18 basis points in the central part of the country. However, the ratio rose by 40 basis points in the Southwest, from 2.3% to 2.7%, owing in large part to the region's well-publicized real-estate problems.

Considered by bank size, the nonperformer ratio dropped from 1.4% to 1.2% at banks with less than $300 million in assets and from 1% to .9% at banks with from $300 million to $1 billion in assets. The ratio remained level at $1-billion-to-$10-billion banks, while it increased from 2.1% to 2.7% at banks with over $10 billion in assets.

Ms. Krause reports that large-bank exposure to the four most troubled LDCs — Argentina, Brazil, Mexico, and Venezuela — is falling, as measured by the ratio of LDC debt to primary capital. This is in part due to the declining volume of LDC outstandings, but mostly to hefty increases in the denominator of the ratio — primary capital.

Primary capital as a percent of assets increased from 6.3% in 1978 to 7.8% last year. That's the good news. The bad news is that the ratio of true equity to primary capital is dropping. Last year, genuine equity fell from 84% to 76% of the total, while the proportion of loss reserves included in primary capital increased from 13% to 21%. ■

THRIFT OBSERVER

Selling Fixed-Rate Originations: A New Strategy

By JOSEPH C. HU

OVER THE PAST six months, thrifts have been blessed with huge inflows of deposits. If these funds are not invested properly, however, the blessing may become a curse.

One investment that may not bring the best potential return is the origination of adjustable-rate mortgages with extremely low initial rates. Currently, initial adjustable mortgage rates average 7.8%, only 40 basis points above the one-year Treasury yield.

Joseph C. Hu

Pressured to invest flooding deposits and fearful of losing market share, thrifts understandably try to stay competitive by offering the best adjustable rates to prospective home buyers. But originating low initial-rate, or teaser, mortgages may not be a practical solution.

The initial rate is upwardly adjustable if future market interest rates rise, but the adjustment is subject to caps — normally 200 basis points per year and 600 over the life of the mortgage. If future rates rise steadily, teaser adjustable mortgages may require more than two years to "float" above water. By that time, of course, the borrower may refinance the mortgage with another teaser.

Thrifts should consider originating and strategically selling long-term fixed-rate mortgages. This is an old strategy with a new implementation. Thrifts would originate fixed mortgages, but instead of selling them in the

➼ Continued from Page 1

return on average equity, and the market-to-book value of a bank's stock. The return on average assets, or ROA, is net income as a percentage of average assets. The return on equity capital, or ROE, is net income as a percentage of average equity capital. The market-to-book value measures the market's perception of bank performance.

'Adjusted' ROA and ROE

The 12 money center banks also were ranked by the "adjusted" return on average assets and the "adjusted" return on average equity. These ratios are based on recurring net income, or net income minus the after-tax values of securities gains or losses, nonrecurring items, and the one-time special provisions attributable to Third World debt. The adjusted ratios measure the potential future earning power of an institution.

The *American Banker* ranked only the money center banks by adjusted ROA and adjusted ROE. Cates' data were available for nine of the 12 banks in the panel, and the *American Banker* was able to estimate the adjusted returns for two of the three remaining banks. The other bank calculated its adjusted returns based on Cates' definitions. It was not possible to adjust the data for all of the banks in the other peer groups; Cates' data were available for only 15 of the 39 banks in the two groups.

Bank of Boston posted adjusted returns on average assets and equity of 1.70% and 26.57%, respectively, to lead the money center group. J.P. Morgan & Co. was second in adjusted ROA, with a 1.10% ratio, and Bankers Trust Co. was second in adjusted ROE, with a ratio of 22.48%.

In unadjusted net income, Republic New York Corp. was the top money center bank, with an ROA of 0.16% and an ROE of 1.90%. Bank of Boston ranked third in the traditional measures of ROA and ROE, with ratios of 0.08% and 0.42%, respectively.

The money center bank with the worst ROA and ROE, on both an adjusted and unadjusted basis, was Mellon. Its adjusted ROA was -1.11% and its ROA was -2.59%. Its adjusted ROE was -27.62% and its ROE was -66.10%.

The *American Banker* defines a money center bank as a bank that is large in asset size; oriented toward commercial and industrial lending; noncore funded (funded by a high percentage of purchased money); and has a sizable international presence.

SunTrust Tops 3 Measures

The $27.2 billion-asset SunTrust Banks was the top large regional firm in all three measures of performance. Its ROA was 1.11%, up from 1.03% in 1986 when it ranked fifth; its ROE was 17.91%, up from 17% in 1986 when it ranked seventh; and its market-to-book ratio was 186.76%, up from 161.05 in 1986, when it ranked sixth.

SunTrust's Florida operations, known as Sun Banks Inc., posted a 20.5% increase in net income and an increase in ROA to 0.89% from 0.80% in 1986. "Major factors in improved earnings," the firm's annual report said, "were expense control, excellent growth in trust revenues, a 16.1% increase in average loans, and a lower domestic loan chargeoff rate."

The Trust Company of Georgia, Atlanta, SunTrust's lead bank, posted an ROA of 1.60% in 1987, as earnings rose 17.7% to $132.4 million in 1987. "Noninterest expense increased by only 3.6%," the annual report said, "while domestic loan chargeoffs decreased from .56% of average loans in 1986 to .44% in 1987. Average loans rose 18% during the year."

Among the regionals with assets of between $10 billion and $20 billion, Banc One again was the top bank in ROA, with a ratio of 1.19%, down from 1.36 in 1986. And again it was the top bank in market-to-book, with a ratio of 179.08%, down from 182.57% in 1986. Banc One was fourth in ROE, with a ratio of 15.25%.

Over the past six years, Banc One has been one of the nation's most profitable banks and has consistently ranked as one of the top companies in the *American Banker's* performance surveys. Its average ROA from 1982 to 1987 was 1.33%. Its market-to-book ratio averaged 187.41 over the period. And its ROE averaged 17.96%, falling from a high of 20.36% in 1982 to 15.25% last year.

For the six-year period, Banc One's earnings grew by more than 236% from $62 million in 1982, when it ranked 34th nationwide, to $208.9 million last year, when it ranked fourth. Banc One is considered a merger specialist with a remarkable ability to assimilate acquired institutions. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our top bank performers feature meets your information needs. So would you spend a moment to give us some feedback? Please clip out this questionnaire and return to: William Zimmerman, Editor, American Banker, One State Street Plaza, New York, N.Y. 10004 (212) 943-5712.

(1.) How would you **change** the feature to make it more useful? What would you add?

____

Peer groups include all bank holding companies with assets over $10 billion at yearend 1987.

(a) On 1/1/88, Fleet Financial Group, Inc., Providence, merged with Norstar Bancorp., Inc., Albany. All 1986 data used in the survey are for Fleet Financial Group.

(b) On 4/29/87 changed title from Maryland National Corp.

(b) On 2/29/88, acquired Fidelcor, Inc.

(c) On 2/29/88, acquired Shawmut Corp. and changed title to Shawmut National Corp.

(d) Acquired by First Fidelity Bancorp. on 2/29/88.

(e) Acquired by Hartford National Corp. on 2/29/88.

(†) First City Bancorp. of Texas, Inc.is excluded from the calculation of the mean and median values for Peer Group 3 in the "How the Market Looks at Banks" table to the left.

N.A.— Not applicable.

Definitions and Methodology

The statistical tables for the American Banker's annual performance study were compiled by the American Banker from data provided by Cates Consulting Analysts, New York. Most of the data were taken from two Cates publications: the **Quarterly Performance Report** for Dec. 31, 1987, and the April 1988 issue of **The Bank Analyst**. In addition, Cates provided data on the "adjusted" return on equity (defined below) that previously was not published.

A listing of the 51 banking firms in today's study appears above. The firms are divided into three peer group: Peer Group 1 — 12 Money Center Banks; Peer Group 2 — 20 Banks with assets over $20 Billion on Dec. 31, 1987; and Peer Group 3 — 19 Banks with assets between $10 Billion and $20 billion on Dec. 31, 1987. Within each peer group, the firms are listed in order of their asset size on Dec. 31. Banks that are not owned by holding companies are excluded from the survey.

Last year was a very unusual year for the banking industry. All of the money center banks and many of the large regional banks took special, one-time provisions attributable to Third World debt and other "non-recurring" losses. As a result, net income/loss data for 1987 were affected greatly by these non-recurring items. To make more meaningful comparisons of performance within a peer group, data which eliminated the "noise" in the 1987 data were preferable to the traditional measures of performance— "unadjusted" ROA and ROE.

For the banks in Peer Group 1 only, it was possible to "adjust" all the 1987 returns on average assets and average equity, by eliminating the non-recurring items from net income. Cates' data were available for 9 of the 12 banks in the panel. American Banker calculated the adjusted returns for two banks; and one bank, at American Banker's request, calculated the adjusted returns, based on the Cates' definitions shown below.

In the table called "1987 Performance of Top U.S. Banking Companies", which appears on page 6, the banks in Peer Group 1 are listed in order of the "adjusted" (recurring) return on average assets for 1987 and on the "adjusted" return on average equity. In addition, the "unadjusted" (traditional) 1987 ROA and ROE figures and peer group ranks are reported for each bank.

The banking firms in Peer Groups 2 and 3 are ranked by three measures of performance: the traditional return on average assets; the traditional return on average equity; and percentage change in earnings per share. It was not possible to adjust the data for all of the banks in Panels 2 and 3, since Cates' data were available for only 15 of the 39 banks comprising both panels.

Net income is income after taxes but before extraordinary items for the full year 1987. American Banker calls it **unadjusted net income.** In the **Bank Analyst**, this was referred to as "nominal" net income.

Adjusted net income is net income minus the after-tax values of securities gains/losses, non-recurring items, and the one-time special provisions attributable to Third World debt. In the **Bank Analyst**, this was referred to as "recurring" net income.

The "unadjusted" return on average assets, as defined by Cates, is net income divided by a daily average of total assets. If daily average assets is not available, Cates uses the mean of Dec. 31, 1986, and Dec. 31, 1987.

The "adjusted" return on average assets, as defined by Cates, is adjusted net income divided by a daily average of total assets.

The "unadjusted" return on average equity is net income minus preferred stock dividends divided by average common shareholders' equity. Here, average equity is computed by taking the mean of Dec. 31, 1986 and Dec. 31, 1987, common equity.

The "adjusted" return on average equity is adjusted net income divided by average common shareholders' equity.

The percentage change in earnings per share is the difference of earnings per share (12/87-12/86) divided by earnings per share 12/86. Earnings per share is primary, based on net income before extraordinary items, and for the 12-month period.

In this listing **American Banker** shows the 1986 data as reported in 1987; lists firms geographically if two or more firms have the identical return on assets for 1987; calculates the group mean; and calculates the group median.

The group **mean** is calculated by summing all of the values and dividing that number by the total number of observations. The **median** is obtained by finding the midpoint of the array of values.

Important survey changes: American Banker has redefined its peer groups this year. The number of "Money Center Banks" has been reduced from 14 to 12. Peer Group 2 has been changed from banks with assets of $10 billion-to-$20 billion to banks with $20 billion or more in assets. And Peer Group 3 has been changed from banks with $5 billion to $10 billion in assets to banks with $10 billion to $20 billion in assets.

To make meaningful comparisons with 1986, all of the 1986 ranks, means, and medians for each peer group have been recalculated. They are based on the banks in the respective panels for this year's survey.

Market-to-book value for 1987 is the stock price divided by the book value per share. Cates uses the bid price on common stock as of Feb. 5, 1988, or the closest trade date, and divides this by book value per share on Dec. 31, 1987. The market-to-book value for 1986 is calculated by dividing the bid price on common stock as of Jan. 31, 1987, or the closest trade date, by book value per share on Dec. 31, 1986.

The price earnings multiple is the stock price, as defined above, divided by earnings per share.

The dividend yield is the indicated annual dividend divided by the stock price as defined above.

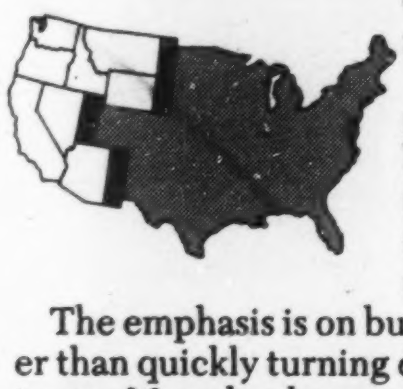
Rivalry Intensifies in California Market

By ROBERT LUKE
West Coast Bureau

LOS ANGELES — Midsize corporate borrowers have long been the mother lode of California banking.

But with so many institutions aggressively mining it of late, some fear its rich margins may be a thing of the past.

Others fret that some competitors may be compromising credit standards in their rush to make deals.



While loan margins may be narrower, some banks think they can bolster profitability by pushing more fee-based products, such as interest rate swaps, through a more efficient distribution system.

The emphasis is on building long-term relationships, rather than quickly turning deals at cut-rate prices and generous terms. Many banks consider the middle market to consist of businesses with sales of $5 million to $250 million.

"The market is in a transition," observes Allan Munro of Greenwich Associates, which recently surveyed about 3,200 California companies on their banking relationships. The firms had sales of $5 million to $50 million.

The latest Greenwich biennial survey found:

- Loan spreads declined to a mean of 121 basis points over the prime rate, from 133 basis points two years earlier. Last year, in a similar survey of larger middle-market firms, Greenwich found the mean fell to 54 basis points over prime from 58 basis points in 1985. The rate of decline in margins was greater in California than nationally: 9.1% versus 5.2%. Spreads in the state, however, continued to be wider than elsewhere.
- The mean loan in California was $1.055 million, compared with $1.094 million nationally. California companies kept mean cash balances of $841,000, compared with $652,000 elsewhere.
- California's businesses are being solicited by more

Court Action May Speed Bank Bill

By BARBARA A. REHM and JAY ROSENSTEIN
Washington Bureau

WASHINGTON — The Supreme Court's decision Monday to let the Federal Reserve Board set securities underwriting limits for banks was a clear victory for banks, but one that may bring a backlash.

That backlash could come in the form of banking legislation. In interviews on Tuesday, industry observers here said Congress is more likely to pass a banking bill — whether bankers want one or not — now that the regulators have free rein to expand powers.

While the Fed wants the banks to step carefully into these new markets, many of the larger banks want to dive in. Some money center banks have been fighting for years for the right to underwrite and trade municipal revenue bonds, commercial paper, and asset-backed securities. The Fed authorized limited entry into these investment banking activities in April 1987.

The securities industry held the door shut temporarily, however, with a court challenge. The legal wrangle was completed on Monday when the high court refused to hear arguments in the case, upholding a lower court decision in favor of the banking industry.

The lifting of the court stay on securities powers means that banks can underwrite these securities through a subsidiary — but only up to 5% of the

Bankers – Take Back Control from Wall Street Analysts

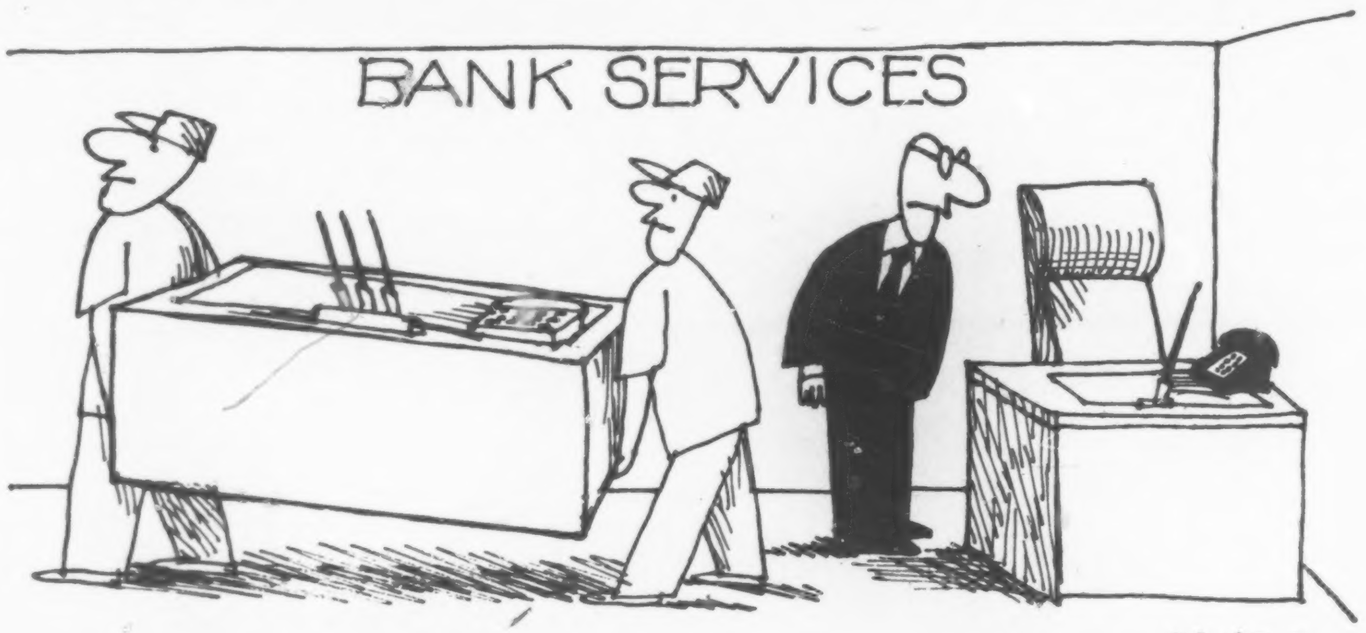
The following is the text of a speech by William F. Staats, given at the 98th annual convention of the Tennessee Bankers Association June 6 in Nashville. Mr. Staats is the Louisiana Bankers Association Professor of Banking at Louisiana State University.

□

MOST OF US can recall the time when the United States industrial empire dominated manufacturing activities on the face of the earth. For example, the steel industry was a major employer in the United States and provided economic prosperity for countless cities across the land and for millions of American families. Second to none in the world, the U.S. steel industry was the cornerstone of our industrial economy.

Most of us can recall when the color television industry was created, developed, pioneered in the United States. For a while every single color television set made in the world was produced on these shores by Americans and American enterprise. That high technology provided jobs for millions of Americans and enhanced the economic welfare of many of our cities and states.

Let's look at those two examples of American enterprise today. The U.S. steel industry scarcely hangs on by the old, proverbial thread. Although in very recent months the declining value of the dollar versus that of the yen has stimulated some steel production and even some minor flows of exports, the United States steel industry is a mere pathetic shadow of its former self.



Sylvio Redinger

What about the color television industry? Today, only one company continues to manufacture color television sets in the United States. Moreover, the newest generation of color television, called High Definition, has been invented, developed, and is now entering production across the ocean in Japan. HDTV, as it is called, is vastly superior to current color television, and experts tell us that it will make existing sets obsolete.

What does all this have to do with banking in 1988? Precisely this. The same problems which were brought on by the management of steel companies and of color television manufacturing companies are now being brought upon the banking industry.

Firms in the steel industry and in the television industry began to view their activities as cash cows, and to focus almost exclusively on earnings growth. Management paid little, if any, attention to reinvesting in productive facilities — in the economic capital of their firms. In fact, one executive of a television firm said that orders came from the board level to cut development money. "The order was always to squeeze the profit," he is quoted as saying.

As a result of management myopia, and as a result of the fixation with short-term earnings performance, the once mighty steel industry and the color television set industry have fallen upon tough times. Shareholders have lost value, employees have lost jobs, and managers have lost their positions.

Eye on Wall Street, Earnings

Friends, I see the same thing coming to the commercial banking industry in the United States. Now, anyone who knows me and who is familiar with my speeches and my writings knows that I am not a prophet of gloom, a nay-sayer, a doomster. Rather, I tend to focus on the positive, the optimistic, regarding the economy and the banking industry.

But in recent years I have grown increasingly concerned about the future of our commercial banking industry. I see bankers keeping one eye on Wall Street and the other eye on short-term earnings performance. I see bankers failing to invest in their basic economic capital — their people. And I am concerned about the long-term viability of our industry unless we change our ways.

One of the major structural changes in banking that has brought on this new attitude among bankers has been the multibank holding company. As these organizations have grown increasingly large — covering first one state, then another, then a region, and, very soon, the nation — top executives in charge of acquisitions and stock values have begun to manage purely by the bottom line.

Again, anyone who knows me and of my involvement in bank investments knows that I am concerned about the bottom line as it affects the value of my investment in bank stock. But I want to tell you that there are other factors besides the current quarter's earnings figures that affect bank values. Those other factors are growth, management quality, financial condition, and the image of a bank as a progressive and innovative servant of the community. It seems to me that many of our bank executives are focusing on only the one — albeit the most important — determinant of the value of our bank, that is, earnings.

However, in their obsessive concern with quarter-to-quarter or even month-to-month earnings performance, management appears to be losing sight of the fundamental strength of banks and of the basic longer-term source of value for these institutions.

Short-Run Tactics

For example, managing a multibank holding company sounds deceptively easy. All you do, you see, is give a bottom-line profit objective to the president of each subsidiary bank. To those presidents who meet the targeted earnings figure, you grant a bonus. To those who do not meet the target, you give notice of termination.

These tactics work in the short run, at least. Chief executive officers of subsidiary banks will do everything that they possibly can to cut costs in order to get the earnings figure up to target. But who is looking at the long-run results of some of those expenditure cuts?

It is really not too hard to cut expenditures at subsidiary banks. Most institutions — banking and otherwise — have some fat on them. So, we simply exorcise the fat, the inefficiency, and costs fall while profits rise. But after the first year or two or three, further cutbacks begin to whittle away at the muscle, the sinew, the fiber, the bone of our organization, the fat having long since been cut out. Because, you see, the relentless search for quarter-to-quarter earnings gains almost requires that the subsidiary cut costs every successive quarter.

Now, to be fair, I must note that profits can be increased by revenue enhancement activities. But it is much tougher to generate greater revenues in the face of increasing competition. So most managers of subsidiary banks will take the easy way out — cutting expenditures. Moreover, you see, to enhance revenues, often we need to spend more money. However, our excessive concern over the bottom line in many cases precludes such expenditures because the revenue enhancement might occur a quarter or a year later — in the short run we would not have reached our target earnings figure.

The sad fact is that as we attempt to cut costs, most of that burden falls upon our employees. In a competitive environment, we cannot very readily cut the largest component of our expenditures — interest expense. So, we turn to the other types of expenditures. Looming largest among these is employee wages and salaries.

Greater efficiency certainly is a desirable objective of banking today. When we can run a bank with one-half of an employee per million dollars of assets, we are in much better shape than in the olden days, when it took, on average, one employee for each million dollars of assets. But we need to have better paid employees who are motivated to do still better jobs in our service business.

'A Bank Is a Group of People'

Bank employees are our economic capital. If we fail to reinvest in this capital, our industry will most assuredly go the way of the steel industry and of the color television manufacturing industry. Top management must recognize that a bank is nothing but a group of people. In a book that I wrote for the American Bankers Association a number of years ago, I defined a bank as a group of people organized to produce products and sell them at a profit. The most important element of that definition is the first few words — a bank is a group of people.

If I were to require a $70,000 loan for my business, it really would not matter to me where I get that loan — $70,000 is $70,000 whether I get it from one bank or another bank, or even from a nonbank competitor. The money is absolutely the same. Generally, if I have a checking account, it does not matter to me whether I get my checking account services from a bank, credit union, or S&L. All of those checks and drafts work exactly the same way.

What, then, will urge me to get my loan or open my checking account at your bank? What differentiates the loan or the checking account at your bank? Essentially, it is the people. People produce our bank products and people add value to those products in a highly competitive marketplace.

Bank employees are simply too important to be treated as a minor element in the productive process of bank products. They are our economic capital just as assuredly as the blast furnaces represent the economic investment of the steel companies. Just like the blast furnaces and the intricate manufacturing facilities for color television sets, our people need to be modernized continually if they are to remain capable of delivering new and sophisticated products at the most effective price levels in the economy.

We need to motivate our people to better performance. We do not motivate when we demotivate! And much of the frantic cost-cutting that I see taking place in the banking industry as we squeeze out additional profits is demotivating our people.

I have seen the adverse impact of excessive cost cutting. I have seen the damage to our economic capital. For example, a number of bank holding companies — and I want to make sure that everyone understands that there are exceptions — eliminate continuing education programs outside of the bank. They say, "Oh, yes, we train internally." And many do a credible job of it.

In some cases, banks simply rule out all banking schools, for example. And I want to tell you that there is no possible way to deliver banking education in-house as effectively and efficiently as it can be delivered through banking schools sponsored by state associations or through regional schools such as the Graduate School of Banking of the South.

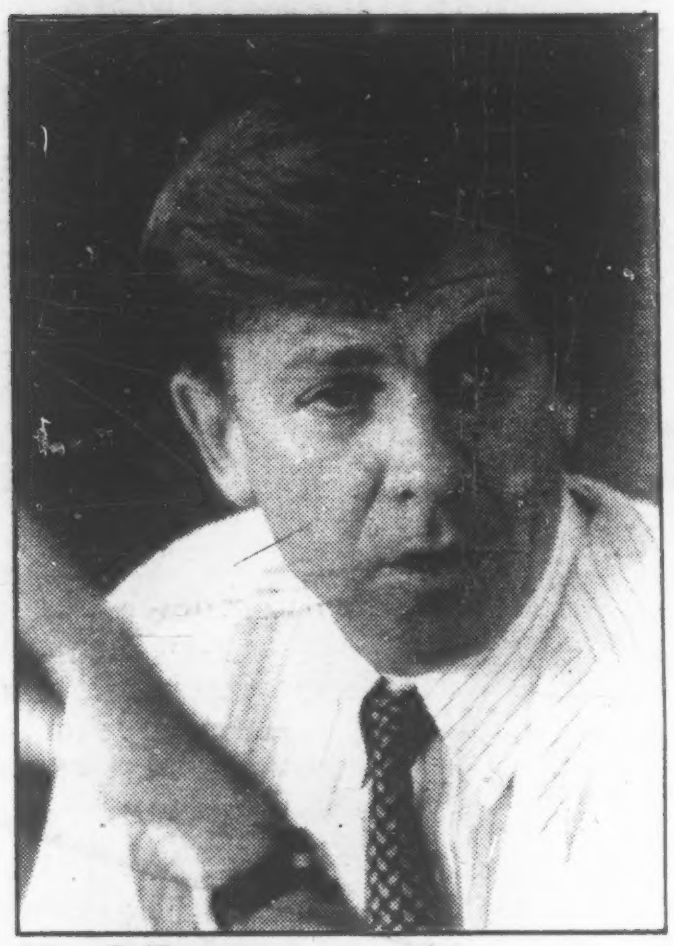
Tiny Margins, Many Rivals Challenge California Banks

Continued from Page 1

banks. About a third said they had been contacted by Japanese-owned institutions.

- But 55% of the companies did not recall any in-person solicitations, suggesting that many of the contacts were cursory. That reflects the desire of banks to get more information about the companies, most of which are privately held, Mr. Munro says.
- Some 17% of the businesses added a new bank last year, compared with 13% nationally. Of those adding a bank, 35% expected to replace a bank. This year, 18% of the companies plan to add a bank, compared with 12% nationally.
- California companies continued to have fewer banking relationships than the national average (2.6 versus 3.1), and also tended to be less price sensitive.
- About a fifth of the companies felt their banks were tightening loan pricing and terms and conditions. Only 4% felt their banks were loosening price and terms.



Allan F. Munro

On the latter score, some bankers beg to differ:

"Compromise of credit standards is going to hurt a lot of people," observes John F. Grundhofer, vice chairman at Wells Fargo Bank.

Scott A. Kisting, senior vice president of Bank of America's commercial banking group, agrees.

"Some of our major competitors are taking risks I wouldn't take in terms of building market share." According to Mr. Kisting, some banks are not requiring the principals of companies to personally guarantee business loans. Nor are they requiring covenants that will permit banks to seize collateral or accelerate loan payments if certain loan conditions are not met. He declined to identify the banks.

"I think it's more pervasive than what I'd like to see in the marketplace, but then again it's understandable from a competitive standpoint, because if you are really trying to move markets, the tools you have are credit structure and price. And it's a combination of the two that will move business."

Keeping loan losses down, and driving down servicing and other costs, can increase flexibility in pricing, says Mr. Grundhofer, who notes that Wells' loss ratio in the middle market has averaged 35 to 40 basis points over the past seven years. That has allowed the bank to price aggressively yet meet its goal of achieving a 1.20% return on assets from that business.

Wells' aggressive pricing irks competitors, big and small.

"That they are all annoyed is a mild term for it," says John J. Keating, chairman and chief executive officer of Lincoln National Bank in suburban Encino. Lincoln recently lost a customer to Wells. The manufacturer wanted $1.5 million, which Lincoln had offered at 250 basis points over prime.

"Wells came in with prime plus one, with no balance [requirement]," recalls Mr. Keating, whose bank has profited handsomely by specializing in the middle market. Lincoln's earnings, for example, rose 51% last year from the previous year.

Sanwa Bank California, another aggressive pricer, also has felt the heat from Wells. Sanwa is one of several Japanese-owned banks that want a larger slice of the market. Another, California First Bank, owned by the Bank of Tokyo Ltd., is acquiring Union Bank, the state's fifth largest bank and one of its largest middle-market specialists.

Sanwa, which wants to increase its middle-market lending by 12% to 15% this year, recently competed with Wells for a $2.5 million credit in Sacramento, says Robert H. Cooke, senior executive vice president. Sanwa had sought a fee for a portion of the credit, and a 25-to-50-basis-point differential in the rate between the short- and long-term funds.

"Wells Fargo did that for no fee and no differentiation between the long term and the short term," Mr. Cooke recalls. "We, from a pricing point of view, didn't think that made sense. So Wells Fargo got the business."

Observes another banker, who asked not to be identified: "They are definitely the market-share-driven bank. They feel the more mass they can run through their offices, the better off they are. The speculation is that they are setting up themselves to be acquired. And that they are buying market share to make themselves more attractive to outside [California] institutions interested in coming into this market."

Wells may be driven by market share, but it is being selective about the business it is going after, says Mr. Grundhofer, noting that "risk-reward still is not well understood by banks. There's not a big price-risk differentiation today. That's got to come."

Bank of America's Mr. Kisting agrees: "The trick is to be more nimble, to try to identify the winners. I'm committed to banking the best-managed companies. For example, I don't want to bank up to 95% of [computer] disk drive companies, because I don't think 95% of them are going to make it. But I want to bank 40% of the well-managed ones."

He wants to provide banking services not just for the companies but for their owners as well, from boat loans to personal trusts.

"Banks are trying to get the whole [banking] relationship to themselves and let no one else in, because that's where the profitability is," says Greenwich's Mr. Munro.

So far, the stiffest competition has been for the 1,000 or so upper-tier companies with sales of at least $50 million. Many of those have multiple banking relationships and, in recent years, have come to rely on investment bankers to help tap the capital markets for financing. Bankers now are vying for that piece of the action.

"Our approach will be to use capital markets products as an adjunct to the credit financing that is still at the heart of the middle market," says J. Kendrick Whiting, senior vice president and manager of regional corporate centers at First Interstate Bank of California. To do otherwise jeopardizes the long-term relationships that banks are trying to cultivate with customers.

"The merchant banker has a mentality that's more like the investment banker in that he thinks in terms of transactions, not necessarily about the long-term relationship," Mr. Whiting observes.

Nevertheless, bankers are introducing more capital markets products, such as interest rate swaps, into the lower end of the market, which largely has been the domain of community banks. Moreover, some banks, such as First Interstate, are now seeking to develop the small business market.

Margins in the lower end of the middle market are fatter, reflecting increased risk, and customers often are loyal.

Why Banks Lose Business

Responses from middle-market companies

	Total Companies (1,584)	Total California (219)
Weakening financial condition of bank	82%	81%
Inefficient operations services	80	81

Surveyed companies had sales of $5 million to $50 million. Data from March-April 1988 survey.

Source: Greenwich Associates

Mr. Munro notes that nearly three-quarters of the estimated 15,000 California companies with sales of $5 million to $50 million still deal with one bank. The typical middle-market company changes its bank once in 15 years on average, according to Mr. Munro. That occurs largely because of poor service or fears that a bank's weak financial condition might cause a cutoff of credit.

That fear of credit loss has hurt the Bank of America, the market leader, and prompted existing customers and prospective new ones to seek credit elsewhere.

"Anytime anybody pulls a prospect list, 4 names out of 10 are going to belong to us," Mr. Kisting acknowledges. Nevertheless, he claims the state's largest bank has retained virtually all of its customer base, which it built over the years with its extensive branch network.

Industry observers dispute Mr. Kisting's claim. They estimate that Bank of America's share of the market has eroded substantially. Figures are not readily available.

But the bank now is aggressively courting customers and, in Southern California alone, Mr. Kisting predicts that Bank of America's volume of middle-market loans will increase 16% to 17% this year from last year's $1.4 billion.

Combined, the state's 15 largest banks control about 75% of the market, according to Mr. Munro of Greenwich Associates.

Mr. Grundhofer observes that California's largest banks are now restructuring their middle-market operations, which Wells began in 1978 and completed in 1981.

The resulting turmoil has caused those banks to lose customers, particularly as they shift or lose personnel and pull corporate accounts from local branches into regional corporate lending centers.

Competitors often point to Security Pacific National Bank, which reconfigured its middle-market unit last year, as one of the banks most affected.

"Six months ago, I would say we were somewhat diverted," acknowledges R. Bruce Owen, executive vice president at Security Pacific. "But my feeling today is that the group is very, very focused."

Rivalry: Page 27

Rivalry Heats Up In California

Continued from Page 23

Mr. Grundhofer thinks the restructuring efforts at other banks may prove to be less than satisfying. He notes, for example, that Wells has hired new staffers.

"We wanted a new culture," explains Mr. Grundhofer, noting that other banks are "just switching people around."

Wells' new calling officers are akin to insurance agents, in that they are paid commissions based on the profitablity of the business they book. But some of that new business apparently is not sticking.

"Once brought in the door, the business has not been as steadfast as it might be," says one industry analyst, who asked not to be identified.

Joseph Sanford, president of First Business Bank here, agrees with Mr. Grundhofer and others that the manner in which a bank approaches the middle market is important.

"Our whole thing is service," Mr. Sanford says. "Banking is a lot more than making loans and what interest rate you're going to charge me on a loan. But the customer is not going to tell you that. You have to develop the services and the value-added concepts and show those to him. They have to be good enough so that he buys them. That's the challenge of it." ■

Powder Mill Has Local Focus, Latest Technology

Continued from Back Page

said. "We want the customer to walk away with interest current, everything current. We want state-of-the-art. Liuba knew what she wanted and left it to them to get the equipment."

The equipment MTech installed includes five model 2262 teller stations and one model 5070 automated teller machine, all from NCR Corp.; and six DX1100 administrative terminals from Datamax Corp., Tallahassee, Fla. (With mock irritation, Mr. Stancel said one of the Datamaxes was in his office but Ms. Beauvais felt it was needed elsewhere more, and moved it. Another is on order for the CEO.)

Before opting for MTech, Powder Mill Bank considered two other data processors. One was NCR; the other was a bank that Mr. Stancel did not identify. "We did not want to go to the bank because then they'd have all our information," he said.

He also had a good feeling about a service bureau he used when he was at Heritage. It was National Computer Analysts, or NCA, a Princeton firm that was the dominant data processor for community banks in New Jersey. MTech acquired NCA last year, making that firm its Princeton data center.

Acting Like a Big Bank

The MTech facility in Princeton has about 100 employees. It is a remote center for about 20 institutions in New York, Pennsylvania, and New Jersey, including Powder Mill, that use MTech's Banker 2000 line of applications. It also serves institutions using the BMIS 2000 package of banking applications, the primary product MTech offers out of Dallas.

The Banker 2000 software is on an MTech computer in Belpre, Ohio, that serves about 100 banks altogether. The Princeton center performs capture services for the Belpre mainframe, a Unisys machine.

Powder Mill is on-line to Princeton during the day. After the close, the bank ships all its items there. MTech performs batch updates overnight — encoding the checks, running them through a reader-sorter, creating a cash letter, creating a file to update accounts, and transmitting everything to Belpre.

POWDER MILL BANK

When processing is complete, Belpre transmits back to Princeton all the reports the bank will use. Princeton delivers hard copies of the reports to the bank. And when the bank comes on line about 8 a.m., all its files have been updated.

All this, Mr. Stancel said, gives Powder Mill the features and flexibility of larger institutions.

"Even though we are a $26 million bank, we operate like a $26 billion bank," Mr. Stancel said. "I can enter into any negotiation for a large transaction that is way over our lending limit, because of participation."

But the time for Powder Mill Bank to go in-house is not yet in sight. "MTech has volumes in there that I haven't even reached yet," Mr. Stancel said.

Investing in an Investment

Powder Mill Bank was incorporated April 7, 1987, and its initial $4.75 million stock offering was oversubscribed, although there was no underwriter. "We came out with a circular and within one week we closed the sale," Mr. Stancel said. "We had to return about $2 million to investors that didn't make the cut."

Ryan, Beck & Co., West Orange, N.J., makes a market in the stock.

One of the incorporators, and a director, is Dean A. Gallo, a local real estate investor/broker and Republican member of the House of Representatives seeking reelection to a third term.

Mr. Gallo is not a member of the House Banking Committee, and he is sponsor of a bill that can scarcely be termed probanker. Introduced a year ago, the bill would amend the Truth-in-Lending Act to protect borrowers on mortgage rate lock-ins, the loan commitments that some institutions backed away from when interest rates fell sharply.

The congressman is in that majority of Powder Mill's 416 shareholders who come from Morris County. And he is among the 66% of shareholders who also are customers of the bank. "They invest in their investment," Mr. Stancel said. "They put their money where their money is."

Mr. Stancel said the primary function of Powder Mill Bank, as of any community bank, is to provide personalized service.

"Customers can get quick decisions," he said. "Officers don't have to wait for the routine paperwork to go to a corporate headquarters 50 miles away. They can make decisions on the spot, about CD rates, lending rates, a credit decision on an applicant who may be right there in the bank. All these can be made in the 5,800 square feet we have in one location. We are experienced enough and talented enough to respond quickly to any customer's need on the spot." ■

Robert A. Meyer of Glasford State Bank in Illinois on the resurgence of Farm Belt banking. [Page 1]

An American Banker Special Report

Farm Belt Resurgence Heartens Local Bankers

By ANDREA BENNETT
Midwest Bureau

MIDWEST REVIVAL

This story is the first of an occasional series on the revival of the midwestern economy and its effect on financial institutions.

WALNUT, Ill. — Despite a shortage of rain darkening the outlook for this year's harvest, bankers report that better times have come to the Farm Belt, which is rebounding from its worst financial crunch in 50 years.

After six years of losses, Citizens First State Bank posted a $200,000 profit in 1987, for a return on assets of 0.76%. Executives at the Walnut, Ill.-based bank expect this year to be even better.

The bank's once suspect loan portfolio is in tip-top shape. "Right now," said James Watson, the bank's president, "we can't identify a loan problem to speak of." Citizens First, 8% of whose loans were nonperforming in 1985, now has no nonperforming loans and only two or three that are past due, "none by more than a few weeks."

Agricultural lenders, after six years of desperation, now are feeling more upbeat.

Their principal borrowers, the farmers, returned to the fields this spring after receiving $23 billion in government subsidies in 1987. Those subsidies helped push net farm income to $45 billion, a level the U.S. Department of Agriculture projects may be matched this year.

Farmers are also enjoying lower levels of debt, lower interest rates than in previous years, reduced expenses, and increasing land values. Also helping farmers is the falling dollar, the primary reason for an expected 16% surge in agricultural exports for the fiscal year ending Oct. 1.

Robert A. Meyer, executive vice president of $13 million-asset Glasford State Bank, Glasford, Ill., shares the optimism of farm bankers. "You just get the feeling it's going to be fun again. We're going to make some money," he says.

Because of the drought, the fun may not come this year. But experts say barring a total crop failure, the drought conditions should not cause too much trouble. "I don't think it is necessarily fair to say that one year of dry weather will tip us back to the farm financial crunch," said Mark Drabenstott, an economist at the Federal Reserve Bank of Kansas City.

IN addition, experts caution that the recovery will be slow, and that not all farmers will share in it. Moreover, the strength of the recovery rests firmly on government support programs, which Duff & Phelps Inc., a Chicago-based rating agency, estimates will dip to about $20 billion in 1988 from $23.1 billion in 1987.

Despite the cautions, there is no doubt farm bankers have benefited from the recovery. In 1987, according to the Federal Deposit Insurance

Hostile Suitor Increases Bid For Irving

Bank of New York Offers $75 a Share in Meeting

By GORDON MATTHEWS

NEW YORK — The Bank of New York Co. on Wednesday increased its offer for Irving Bank Corp. to about $75 a share from about $68. But unlike previous offers in the long and hostile takeover battle, the latest bid was unveiled during a face-to-face meeting between the two Wall Street banking rivals.

Bank of New York said after the 45-minute meeting, held at the urging of a state judge, that it will continue to offer $15 in cash for all Irving shares. But it will now add 1.675 shares of its own stock, an increase from 1.575 shares in its old bid, and also offer both a special dividend and warrants.

A special dividend of $2.50 per Irving share will be paid just before completion of the offer, Bank of New York said. At the same time, warrants — or shareholder participation rights — will be issued with a value of up to $2.50 per share calculated on the after-tax gain from the sale of Irving's headquarters building at One Wall Street.

Bank of New York Chairman J. Carter Bacot urged Irving to dismantle its takeover defenses and accept the bid "on a friendly basis." Irving's only comment was to announce that its board of directors will consider the new proposal at a meeting on Tuesday.

There was no immediate comment from Banca Commerciale Italiana, the major Milan bank that has acted as white knight in Irving's bitter fight against a takeover by Bank of New

Correction

Bank of Boston Corp. had the third highest adjusted returns on average assets and equity among money center banks last year; it did not have the best ratios, as reported in the *American Banker's* annual performance survey on June 14 (page 6). Data for the survey were provided by Cates Consulting Analysts, New York, and Bank of Boston submitted corrected data to Cates after publication.

Based on the adjusted ratios, J.P. Morgan & Co. was the top money center in return on assets, with an ROA of 1.10%. Bankers Trust New York Corp. was the top money center bank in adjusted ROE, with a ratio of 22.48%.

Recurring net income is net income minus the after-tax values of securities gains or losses, nonrecurring items, and the one-time special provisions attributable to Third World debt. The table above lists the money center banks in the corrected order.

Fleet/Norstar Pitches Loans to the College Bound

Special to the American Banker

PROVIDENCE, R.I. — Any day now, several hundred thousand high school seniors across the country will receive an unexpected letter from a northeastern banking company they may never have heard of — Fleet/Norstar Financial Group.

Most of these graduating seniors will already have received the letters they awaited anxiously for weeks, saying they have been accepted at a college or university this fall.

"Getting into college is a big step," the letter from Fleet/Norstar reads. "Now, we'd like to help you with the next one — working out the right way to handle the expenses."

The bank holding company's mailing marks its opening salvo into the national, multibillion-dollar competition among large New York and superregional banking companies to lend money to students for college. Fleet/Norstar company maintains dual headquarters in Albany, N.Y., and Providence.

CONSUMER FINANCIAL SERVICES
AN AMERICAN BANKER WEEKLY FEATURE

The firm offers a comprehensive array of financial services for higher education launched under the name Focus — financial options for college and university students.

In addition to Fleet's loans, the services include a prepaid tuition plan, an equity-secured line of credit, student Visa card, and credit from the four major government-guaranteed student loan programs.

Fleet/Norstar has always been a local player in education lending, but its national student loan program will provide a calling card to families in all parts of the country as it seeks to expand outside the Northeast. The company hopes the students will carry the loans along with good memories of

Consumer Survey Gives Nod to Credit Unions

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — Credit unions typically offer the best deals on checking accounts, concludes a special section on banking in *Consumer Reports* magazine, which is noted for testing everything from mortgages to microwaves.

"If you can live without the return of your canceled checks, credit unions are a good bet for low-cost checking," the magazine tells consumers, while warning them to scrutinize credit unions, just as they should other institutions, for such factors as minimum-balance requirements and fees.

Among other findings of the *Consumer Reports* survey of 120 banking institutions in 10 metropolitan areas: Consumers can save hundreds of dollars a year by shopping around even for a basic checking account.

In Boston, for example, the magazine found that a consumer with a "moderate-size" checking account might pay $180 a year to maintain that account at State Street Bank & Trust Co., while a similar account at Shawmut Bank might earn the consumer $34 a year.

Consumer Reports is published monthly by Consumers Union, a nonprofit organization, and claims a paid circulation of 3.5 million.

The special report on checking accounts is the first of three installments to help consumers "shop smarter" for banking products. The next two issues will cover recommendations for shopping for savings accounts, examining the safety of deposits, and evaluating loan products.

What the Institution Spends

In the just published July issue, *Consumer Reports* estimated what an institution spends to maintain an account and what it earns from lending the money. It then suggested what might be the reasonable costs assessed consumers for such as "an efficiently run account." For example, it said, a $5 penalty for bouncing a check "should be plenty."

Based on the magazine's overall calculations about reasonable fees, only 36% of the banks and thrifts surveyed offered this kind of good deal to the "average-balance customer," while 84% of the credit unions did. The magazine defined an average balance customer as one with $1,300 on balance and 21 checks written a year.

Bankers contend that credit unions typically can offer better deals because they are nonprofit organizations that pay no federal taxes.

Of the 120 institutions surveyed by *Consumer Reports,* 20 were credit unions.

Cheapest Accounts in Boston

Other findings from the survey:

• The least expensive accounts were found in Boston, where a person with an average daily balance of $1,300 could expect to pay about $38 a year for checking services. The most expensive were in Houston, where the same type of account could cost $120 a year. The "power of competition" kept prices lower, it said, noting that savings banks and commercial banks in Boston

2 Arkansas Brokers Fined in Failure Of 2 Kansas Banks

By ANDREA BENNETT
Midwest Bureau

CHICAGO — The Arkansas securities commissioner has fined two Little Rock brokerage firms following an investigation into the firms' dealings with two Kansas banks that subsequently failed.

In consent orders made public this week, First Investment Securities Inc., a Little Rock broker-dealer since June 1983, was fined $10,000. U.S. Associates Inc., a registered broker-dealer since October 1986, was fined $15,000.

Six unnamed Little Rock securities firms were also investigated for their dealings with the two Kansas banks. The results of the examinations of those firms were not made public, but the Arkansas securities department said no further action is anticipated.

"There may be things in the best of all perfect worlds you might have wanted done differently, but [there were] no violations of law," said Beverly Bassett, the Arkansas securities commissioner, about the six firms.

The Arkansas commission began an investigation after receiving a letter in October 1987 from the Kansas banking department that questioned whether securities laws had been violated by the eight Little Rock firms in their dealings with the two Kansas banks.

The banks, the Mayfield State Bank of Mayfield and the Murdock State Bank, Murdock, were closed on Sept. 24, 1987. Regulators cited speculative securities trading at the banks, which had joint ownership, for the failures. The banks' joint assets soared from $16 million on June 30, 1987, to $85 million in August the same year.

In announcing the results of the investigation, Ms. Bassett said in a press release that broker-dealers have a duty to determine the suitability of a securities transaction recommended and executed for a customer.

According to the consent order, First

Corporate America Needs to Nurture True Leaders

By LEONARD BERRY

MANAGING, administering, and supervising will not build a service-minded corporate culture. Only genuine leadership at all levels of an organization can overcome the temptations of service mediocrity and inspire people to be the best they can be.

The No. 1 reason service is so mediocre in American business today is the short supply of true leaders. Too many service workers in America are overmanaged and underled. They want to be free to serve and to exercise some judgment in service delivery; instead they are shackled with thick policy manuals that limit their flexibility. They seek feedback and coaching and recognition; instead they receive memos and commands and stares. They want to work in an achievement culture, to be challenged to be better than average, to be better than good; instead they work in a culture that accepts mediocrity as a way of life.

In every industry, there are pockets of inspired leadership and excellent service. But these pockets of excellence are the exception, not the rule. On the basis of 20 years working with service sector companies and a six-year research program on service quality in America, I am prepared to say in print that our service standards are too low, and our willingness to accept mediocrity as a given, as something about which nothing can be done, is too great.

When are we going to wake up and get serious about making our companies work harder and smarter for customers? If we wait much longer to raise our service aspirations and increase our intolerance of shoddy service, foreign companies and countries will dominate virtually every industry that we in America once dominated. If we wait much longer we will lose control of our economic destiny.

Berry Says:

Our service standards are too low, and our willingness to accept mediocrity as a given, as something about which nothing can be done, is too great.

We must start by understanding the imperative of leadership. In business firms and in business schools, we must do a better job teaching and nurturing leadership skills. But first we must understand what leadership means and realize that good managers are not necessarily good leaders.

Characteristics of Leadership

I have had the opportunity to work with some outstanding leaders over the years, both on campus and in the corporate community. My views on leadership have also been influenced by Warren Bennis and Burt Nanus, authors of "Leadership: The Strategies for Taking Charge," and by banker Nick Baker and researcher Evaldo Palmores, who are training school administrators to be better leaders. From these experiences I have derived the following list of a true leader's characterisics:

- Vision: Leaders have a vision of the future, a mental picture of what it is they wish their organization, or organizational unit, to be. Leaders always have an agenda. They see entire puzzles, not just puzzle pieces; they see the future, not just the present.
- Persistence: Leaders not only have an agenda, they are determined to carry it through. Leaders are role models of consistency. They have an agenda for the future and are rarely distracted from it. Some observers assume that it was Lee Iaccoca's charisma that saved Chrysler from extinction. I believe the key factor was Mr. Iaccoca's stubbornness; he simply would not be denied. Leaders like Lee Iaccoca find a way to do what they set out to do.
- High standards: Leaders are obsessed with their organization doing things right, not just doing the right things. They care deeply about excellence and are forever on the lookout for ways to improve the conduct of the business. Leaders are executors, not just strategists. They are attentive to the nuances and details of the operation, recognizing opportunities in small actions that competitors might consider trivial. Leaders believe that how an organization handles "the little things" makes a big statement about the organization to its publics. Leaders "major in minors."
- Direct communication: Leaders are relentless communicators. They coach. They praise. They cajole. They correct. They sermonize. They emphasize the richest communications medium, which is face-to-face communications. They communicate with their eyes and expressions and words and the example they set. They rarely write memos, preferring to see and hear from their audience. Leaders find the time to be visible, to listen and not just talk. They recognize they cannot really lead if they don't know the people to be led.
- Team-building: Leaders thrive on the building of teams. They are expert at bringing people together, breaking down barriers, opening up channels of communications, rallying the troops to the cause. They think in terms of "we" not "I." They give authority commensurate with responsibility and find ways to turn the spotlight on others when they come through. Leaders challenge the team to achieve, use the influence of their office and the powers of their persuasiveness to remove obstacles from the team's way, and use frequent meetings of the team to spark peer pressure, the strongest motivator of all.
- Self-confidence. Leaders are comfortable with themselves. They believe in their ability; they are confident in the value they add to their organization. As such, they have a capacity for listening to contrary opinions and unpleasant news that many in management positions lack. Leaders have a good enough self-image that they do not always have to "win" the debate. Accordingly, leaders are more likely to receive candid input from others and to benefit from these ideas and concerns.
- Integrity. Leaders cannot lead effectively unless others are willing to follow. Personal integrity is a principal factor in inspiring followership. The best leaders place a premium on fairness with all parties at all times. They do not wish to be party to devious practices. Their standard is not "what can we get away with" but rather "what is proper." Leaders are tough competitors, but they do not seek success by cheating. To a true leader, winning unfairly means losing.

Questions to Ask

The time for renewed attention to the issue of leadership is at hand. We need to ask hard, uncompromising questions about leadership in our organizations and we need to ask them now. Questions like:

- Do we know what leadership is in this organization?
- Do we look for leadership characteristics when we promote people, putting them in charge of other people?
- Do we reward leadership in this organization or do we punish it?
- Do we teach leadership in this organization — or do we teach something else?

I will be devoting future columns to the issue of what we can do in our organizations to nurture leaders. I invite my readers to write me with ideas, suggestions, stories, and examples, care of: Department of Marketing, College of Business Administration, Texas A&M University, College Station, Tex. 77843-4112.

The leadership challenge is urgent. We are running out of time. ■

Dr. Berry is Foley's/Federated Professor of Retailing and Marketing Studies at Texas A&M University and director of the Center for Retailing Studies. He is a past president of the American Marketing Association.

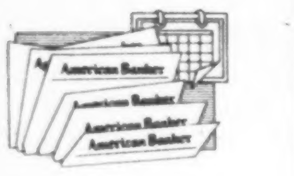
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- The Senate voted in favor of a two-year military draft for men aged 19 to 26. The draft was designed to provide 250,000 men for the armed services.

20 Years Ago

- The American Bankers Association urged Congress to pass legislation imposing strict controls on the sale and use of all types of firearms. Noting a mounting toll of deaths in the nation attributed to gunshot wounds, the ABA's administrative committee approved a resolution that stated: "The banking community is no idle spectator to this tragic trend of events. During 1967 there were 18 deaths at the scenes of attempted bank holdups."
- Wells Fargo Bank said it would convert to a national charter to acquire "more flexibility in its operations." Bank president Richard P. Cooley noted that national banks were permitted to operate their mortgage banking, equipment leasing, credit card, travel agency, and credit bureau activities through subsidiary corporations. As a state-chartered bank, Wells did not have such options. Wells Fargo was California's largest state bank and the 11th largest bank in the nation.
- The Supreme Court ruled that national banks were not subject to state sales and use taxes, reversing a decision by the Massachusetts Supreme Judicial Court.

10 Years Ago

- The Supreme Court let stand a lower court ruling permitting national banks to continue in the automobile leasing business. The court refused to review an appellate court decision in a suit brought by a group of independent automobile leasers against two western banks in 1973. The appellate court ruled that automobile leasing was a financial activity related to the business of banking and thus consistent with the National Bank Act.

5 Years Ago

- The Supreme Court, while noting that a 1934 law known as the Bank Robbery Act was originally enacted to prosecute gangster-style robberies, ruled that the law applied to crimes in which a person took money from a bank under "false pretenses."
- The Federal Reserve Board voted to require that the nation's 17 largest multinational banks maintain primary capital equal to at least 5% of their total assets — the same capital level required of smaller regional banks since December 1981.
- CBT Corp. and the Bank of New England Corp. announced that they planned to merge. Hartford-based CBT, Connecticut's largest bank, and Boston-based Bank of New England, Massachusetts' third largest bank, each had $5.1 billion in assets.

1 Year Ago

- American Express Travel Related Services Co. unveiled gift checks and said it would spend $4 million promoting the new product during the Christmas season.
- Manufacturers Hanover Corp. said it would boost its loan-loss reserves by $1.7 billion in the second quarter to reflect developments in foreign debt refinancing. The bank said the addition would result in a second-quarter loss of about $1.4 billion. Bankers Trust New York Corp. announced it would make a $700 million special provision to its loan-loss reserve, reflecting its exposure to economically troubled borrowers.
- Citicorp said it would sell its wholly owned South African subsidiary because of growing constraints on the unit's business operations. The bank said it would sell the unit, Citibank NA Ltd., to the First National Bank of Southern Africa Ltd., Johannesburg, for $38.2 million.
- Walter Heller died of a heart attack at the age of 71. He served Lyndon Johnson and John F. Kennedy as chairman of the President's Council of Economic Advisers from 1961 to 1964.

Fleet/Norstar Makes Pitch to College-Bound Borrowers

➻ Continued from Page 2

Fleet/Norstar when they settle down and need more banking services.

Besides providing an introduction to future customers, student lending also can be a way to diversify income, according to Fleet/Norstar officers.

"We're optimistic this is a business we can make a profit in," J. Terrence Murray, president and chief executive officer, recently told bank analysts meeting in New York.

California Unit May Earn $2 Million

Fleet Education Funding, a new arm of the company created to coordinate its education loan business, may only break even this year. But a California-based firm owned by Fleet/Norstar that processes student loans for a fixed fee should turn a $2 million after-tax profit in 1988, Mr. Murray said.

H. Jay Sarles, executive vice president, projected the banking company could do $150 million in originations this year, which would catapult Fleet/Norstar to a position among the nation's leaders.

Charles Diggs, president of Fleet Education Funding, said Fleet/Norstar originated 23,500 student loans totaling $58 million in 1987 and had a total outstanding portfolio of $340 million.

Fleet/Norstar sells many of the loans it originates but keeps all the servicing, for which it receives a fixed fee for each loan it processes.

Though rich with potential, student lending is not risk-free.

A recent Consumer Bankers Association survey of 126 financial institutions showed the average pretax return on assets for guaranteed student loans to be 0.36% to 0.76%. Most reported a return below the 0.6% expected by shareholders and managers, according to the trade group.

There is continuing talk in Washington of narrowing the interest rate spread that lenders are allowed on federally insured loans; such a measure would cut profitability.

Another proposal would require lenders to assume some of the risk of guaranteed student loans, which are now backed 100% by the federal government.

And because of the growing delinquency rate of student loans, the Education Department continues to push lenders to crack down on defaulters by tightening collection requirements.

This year, about $9 billion in loans will be made under the guaranteed student loan program, and a majority will be issued by the big money center banks in New York. In 12 years, the program has provided $70 billion in loans to 30 million students.

Citicorp Is Leader

Citicorp has been the industry leader for years, followed by Chemical New York Corp., Marine Midland Banks Inc., and two companies outside New York — Florida Federal Savings and Loan Association, St. Petersburg, and Wells Fargo & Co., San Francisco.

Among New England banks, Bank of Boston has been the largest student loan originator but ranks only 34th among all big lenders, according to the latest Education Department statistics.

Fleet/Norstar officials have sound reasons for entering the national student loan market at this time. While student enrollments have stayed constant at 12 million, they explain, the cost of a college education has escalated — becoming more unmanageable for many families.

At the same time, the Reagan administration has shifted its policy away from grants to loans for low-income students, leaving more students with a need to borrow more money.

"That indicated to us that the private sector must step in," said Mr. Diggs of Fleet Education Funding. "It also created an opportunity for us to develop another line of business."

For banks operating in an increasingly competitive market, student loans are an attractive business, because they are insured by the federal government, earn a floating rate of return, and expand the retail customer base.

But an equally important reason for Fleet/Norstar's entrance into the national student loan market was the potential to build loan volume for its profitable servicing company, Academic Financial Services Association, which Fleet Financial Group bought in late 1986.

"When Fleet bought AFSA, they saw the servicing was a good, profitable business — and one way to increase that servicing portfolio was to build loan volume," said Livia Asher, a bank analyst for Fox-Pitt Kelton Inc., New York.

Academic Financial Services Association, based in Long Beach, Calif., now services a $4 billion portfolio representing about 1.8 million loans from about 60 financial institutions and 800 colleges and universities, said Richard Kipper, president.

Fleet/Norstar originates only 8% to 10% of the loans that Academic Financial handles. The Student Loan Marketing Association, or Sallie Mae, the national secondary market, is its biggest client. Sallie Mae provides about 25% of its loans and has a servicing contract with Academic Financial through 1989.

Mr. Kipper said that if the federal government cuts back the profit spread allowed to private lenders on guaranteed student loans, servicing companies may be the beneficiaries.

"As banks get a lower yield, they will look internally at their servicing cost and may find they can get a better price through us," said Mr. Kipper.

Originators and Holders Of Student Loans

Top Student Loan Originators	Year Ended 9/30/85 ($ Mil.)

Source: Department of Education

American Financial Service Association's major competitor is First-Wachovia Student Financial Services, a division of North Carolina-based First Wachovia Corp.

First Wachovia's servicing portfolio is $2 billion and processes 2 million loans from 900 colleges, universities, and financial institutions from 46 states.

Though a leading servicer, First Wachovia is not a major originator of education loans. Other major lenders, such as Citibank, Chase Manhattan, and BankAmerica, do their own servicing.

Fleet/Norstar plans to drive up loan volume to build its servicing portfolio through the Focus program.

"Rather than waiting for students to walk through the door, we go out seeking business," said Mr. Diggs, 41, a marketing specialist with 10 years at Fleet.

Fleet Education Funding kicked off a direct mail campaign earlier this spring to local, regional, and national customers, high school seniors, and college freshmen. In addition, some colleges and universities have joined Fleet/Norstar in this effort and are making separate mailings to inform students of the company's offerings.

One full-time lending officer responsible for student loans has been placed in each of Fleet/Norstar's seven banking centers. There are four centers in New York and one each in Connecticut, Maine, and Rhode Island.

"No other financial institution has put together so many education funding options from a single source for families of all income levels," Mr. Diggs said.

The key component is a Universal Education Loan, a privately guaranteed loan that lets families borrow up to $15,000 a year to a maximum of $60,000 over four years.

Mr. Diggs expects Fleet/Norstar's student loan portfolio will be split, with 75% of federally guaranteed loans and 25% privately guaranteed loans.

That could change, however, if the Education Department significantly changes the federally insured loan program to reduce the huge number of loan defaults.

The Education Department estimated student loan defaults will cost the U.S. Treasury $1.6 billion this year, up 20% from last year. The defaults represent the third biggest item in the Department of Education budget. The cost is projected to grow to $2 billion by 1990.

To curb defaults, new rules were imposed earlier this year to tighten due-diligence collection procedures that lenders must follow before making a default claim, causing rejection of up to $400 million in lenders' claims. The department felt lenders were not trying hard enough to collect loans.

The new government rules sparked tension among educators and lenders, many of whom threatened to back out of the program.

Lobbying Reaps Eased Policy

In March, Fleet/Norstar and other lenders lobbied in Washington against the new rules. They won a more flexible policy, in effect through last May 1. The relaxed policy made it easier for lenders to handle delinquent loans, without the threat of losing government guarantees.

The Department of Education is feeling continued pressure from education leaders in Congress to enact even more rigorous rules and regulations this fall.

In addition, the Education Department's proposed budget calls for cutting the federal guarantee from 100% of the loan to 90%. Congress will decide on the issue by this fall.

Last year, the government cut the margin that banks could tack on to Treasury-bill yields to determine the interest rates on student loans. The spread was cut from 3.5% to 3.25%.

Lenders say the government is considering another 25-basis-point cut in the spread. If that cut becomes a reality, 56% of the 123 largest student lenders say they will slash their programs or drop out of the guaranteed loan program, according to a survey by the Consumer Bankers Association.

"If it is cut further, you will see more and more institutions drop out of the program," said Mr. Diggs, "We are committed to student lending. But significant changes in the rules could cause us to move away from guaranteed student lending and toward more privately insured loans." ■

targeted markets."

Mr. Rinella insists that Lifetime is not just the latest financial services marketing fad.

"This really represents a long-term training program or development program for our employees," he said. As such, it is another step in changing the industry from order-taking to a sales culture. The Chicago thrift executive said that St. Paul Federal has for some time embraced a sales culture, complete with sales incentives and commissions. And the thrift's sales force, according to Mr. Rinella, is now ready for the next step.

"The next step now is bringing them into the financial planning type of role, because that's what our customers really need. They're looking for help." He added: "This program is meant to educate and transform our employees so that they can become financial planners."

The Lifetime program grew out of research that St. Paul began in 1985. The thrift found that its average customer has relatively simple financial goals — establishing credit, buying a home, sending the children to college, and maximizing the retirement nest egg. It also found that this average customer at times is confused and even intimidated when dealing with the array of financial products now available at banks and thrifts.

In addition to consumer confusion, deregulation also wrought a whole new competitive environment for St. Paul Federal, which used to be a traditional, mortgage-making savings and loan association. The institution's expanded product line, in addition to checking, savings, and credit vehicles, now includes insurance and investment services. The thrift owns its own insurance agency and brokerage.

According to Mr. Rinella, the Lifetime program is the result of St. Paul Federal's desire to tie together its diverse product line.

"But we wanted to do more than just develop an asset management account or a CitiOne-type account," he said. "We wanted to develop a package and target it to major groups of our customer base." Thus, St. Paul Federal spent two years on internal development of what has become the six Lifetime accounts.

Mr. Rinella has great expectations for the program. He believes that, in the future, Lifetime account holders will represent a solid core of deposits and customer relationships.

"The program is a means to support our positioning in the marketing place," he said. And it "is a key to developing the primary financial relationships with customers." ■

THRIFTS & MORTGAGES

The chairman of Investors of Florida Savings Bank plans to build a major mortgage franchise by buying up bankrupt syndicators. ____ 5

A bill to curtail direct investments by thrifts has been introduced by Rep. Jim Leach, R-Iowa. The Leach measure would require the Bank Board to adopt regulations for S&Ls similar to those on the books of the regulatory agencies of commercial bank. ____ 5

More attention should be paid to proposed remedies for the ailing thrift industry than to estimating the costs of bailing it out, writes Henry Peltz in the Observer column. ____ 4

Worth Repeating

They have called us a lot of things — a white serf instead of a white knight. They say we are part of the Italian government. None of these things, I think, are befitting a member of the international financial community, and none of these things do I accept.

Mario Arcari, managing director, Banca Commerciale Italiana. [Page 1]

BCI Angry over Bank of New York Tactics

By JOHN J. DUFFY

MILAN — When he talks of the long running tug-of-war between the Bank of New York and Banca Commerciale Italiana for control of Irving Bank Corp., Mario Arcari's eyes alternatively flash amusement and anger.

When it comes to some of the Bank of New York takeover tactics, however, anger is clearly the dominant emotion. "It's been mainly a lot of B.S.," said Mr. Arcari, formerly chief executive officer at Long Island Trust Company and currently one of Banca Commerciale's two managing directors.

"They have called us a lot of things — a white serf instead of a white knight. They say we are part of the Italian government. None of these things, I think, are befitting a member of the international financial community, and none of these things do I accept."

The fight between Banca Commerciale Italiana and the Bank of New York for control of Irving moved into a new phase Wednesday when Bank of New York increased its offer to roughly $75 in cash, stocks, and dividends for each Irving share it does not already own.

That compares with a BCI offer of $80 a share, plus interest payments and special dividends, for 51% of Irving.

BCI chairman Enrico Braggiotti said the new offer was being studied. "We do note that in light of the offer's significantly dilutive effect on the Bank of New York's stock, there is a great deal of uncertainty about the true value of its proposal," he said.

At the head offices of Banca Commerciale Italiana here in the Piazza della Scala, which overlooks the famous Scala opera house, BCI executives are clearly digging in for a fight. With a six-hour time difference between Milan and New York, BCI executives are often still in their offices at 9 or 10 p.m. awaiting the latest bid developments from New York.

'They have called us a lot of things — a white serf instead of a white knight.'

— Mario Arcari

In spite of the long hours, Mr. Arcari and Mr. Braggiotti believe they have made good progress in educating the American banking community about both the reasons for the bid and how state-owned Italian banks operate.

"At the beginning, the response from American analysts and the American press was very negative," Mr. Ar-

Loss of Centerre Bid Leaves Mercantile Vulnerable

By RICHARD RINGER

ST. LOUIS — The battle between Boatmen's Bancshares Inc. and Mercantile Bancorp. to acquire Centerre Bancorp. was not just a fight for control of a bank. More important, the crosstown competitors were fighting for long-term independence.

With Boatmen's victorious $467 million offer on Tuesday, its future seems a bit more secure. Mercantile, analysts said, will be looking over its shoulder at potential acquirers.

When completed, the Centerre acquisition will increase Boatmen's assets to $14.7 billion from $9.9 billion, making it the 41st largest bank company in the country and the largest by far in the region. Mercantile is the next largest Missouri bank, with $6.8 billion in assets.

The acquisition of Centerre "certainly reduced the chance" of another bank company acquiring Boatmen's, said Donald N. Brandin, a director of Boatmen's. "It would be very difficult to acquire somebody of our size.

"Banking consolidation is sweeping across the country. It is inevitable," he said in an interview at Boatmen's offices shortly after the agreement was announced. "We think this size will put us in a better position to compete more effectively with some of the emerging superregionals that are developing in the East."

The stock market on Thursday confirmed that Mercantile was back in play as a takeover target. Mercantile's stock rose to $26.75 from $24.75 a share yesterday in heavy trading.

The Boatmen's-Centerre agreement ends six months of efforts by competing Missouri bank holding companies to get control of Centerre. Several out-of-state holding companies also had expressed an interest in acquiring all or

Ex-InterFirst Director Faces Fraud Charges

By JIM McTAGUE
Washington Bureau

WASHINGTON — Federal prosecutors Thursday charged Edwin L. Cox Jr., a former director of InterFirst Bank Dallas, with fraud in connection with his 1986 default on an $80 million loan.

Mr. Cox, scion of one of the wealthiest families in Texas, faces five years in prison plus a $250,000 fine, according to Jack Williamson, the U.S. attorney in charge of criminal investigations for the Dallas district.

In November 1987, Mr. Cox repaid the loan plus interest to FirstRepublic Bank Corp., which had merged with the parent company of InterFirst Dallas. Mr. Williamson said the repayment most likely would be taken into account if Mr. Cox is convicted.

The prosecutors charged that Mr. Cox filed false financial documents with the bank in order to obtain the loan, misleading bankers about his financial condition as well as the value of the cattle pledged as collateral on the borrowings. He will be arraigned on June 24 in Dallas.

Mr. Cox, 40, could not be reached for comment Thursday. His spokesman, William Graham, did not return phone calls.

Mr. Cox previously said he always had intended to repay the loan.

Former employees of the defunct InterFirst Bank Dallas, who lost their jobs when the bank failed, have charged that Mr. Cox used his status as a director and a longtime bank customer to mislead loan officers.

Contributed to Bank's Large Loss

The news of the default created a sensation in Texas. On July 15, 1986, InterFirst Corp., the bank's parent, announced it would report a $281.1 million loss in the second quarter. The Cox loan was identified as a "material amount" in the loss.

The bank made a criminal referral to the Justice Department. Mr. Cox's allies have maintained that if the multimillionaire had not had such a high profile, the case would have been dropped.

"Certainly the Attorney General has something better to do than to go after someone who had a technical glitch in his operations but eventually paid back his loan," a lawyer for Mr. Cox said several months ago.

Mr. Cox's father is an oilman who was one of InterFirst Corp.'s founding directors. The business school at Southern Methodist University is named after him.

The former bank employees, who spoke on the condition of anonymity, said the younger Mr. Cox had a 15-year banking relationship with InterFirst. As a director of the corporation's flagship bank in Dallas, he was a member of the loan review committee, they said.

The ex-employees said they were shocked in June 1986 when Mr. Cox first announced that he could not repay his loan and would declare bankruptcy if they did not work with him.

The day he defaulted on the loan, Mr. Cox had told them he was bringing his cattle company's new chief financial officer to the bank for a visit, the former employees recalled. Instead, he walked into bank president James Irwin's office with bankruptcy lawyer Henry Simon and announced, "I have a huge problem — I'm busted," according to one of the former employees, who was at the meeting.

The bankers said that Mr. Irwin then walked "like a zombie" into chairman

Downgrade Looms on Argentine Loans

But Reduction in Profits Would Not Approach Brazil Losses

By BART FRAUST

NEW YORK — Bank earnings, on the rebound in the first quarter, face a new jolt this year — the potential for billions of dollars in nonperforming Argentine loans.

But the shock to bank profits will not be as severe as occurred when Brazil declared a moratorium on loan repayments 15 months ago, analysts said.

U.S. banks' exposure to Argentina is about half as large as it is to Brazil. And no major moves to bolster reserves are expected, unlike what happened in the aftermath of the Brazilian moratorium.

In addition, Argentine debt talks are starting as the banks close in on an agreement that would allow Brazil to resume interest payments on its bank debt. Resumption of interest on Brazilian debt would more than offset loss of income from Argentina, analysts said.

The earnings impact from Argentina could be felt as early as this quarter, particularly if the International Monetary Fund in meetings this month with Argentine officials does not approve additional disbursements of a $1.9 billion loan package signed last year.

The first large bank holding company to declare Argentine debt nonperforming so far this quarter is Wells Fargo & Co., which recently classified $15 million of its $125 million Argentine debt as not accruing interest.

Other large banks said there are no immediate plans to declare Argentine loans nonperforming.

Argentina, with $54 billion in debt, is the third largest Latin American debtor, after Mexico and Brazil. The nation has not paid any interest on $35 billion in medium-term and long-term debt since the end of March.

A team of IMF officials flew to Buenos Aires this week to begin talks with Argentine officials, banking sources said. Argentina also still has available $150 million in existing bank loans and World Bank loans from which it could pay the first-quarter interest, the bankers said.

"There are funds that could be made available if Argentina moves quickly," said one banker.

But even with additional disbursements from the IMF and other lenders, bankers and analysts believe there is a strong possibility that, some time this year, much of Argentina's bank debt will not accrue interest.

"By the end of the third quarter, I think two-thirds of Argentina's loans will be nonperforming," said Lawrence Cohn, money center bank analyst for Merrill Lynch & Co.

Mr. Cohn was referring to Argentina's public debt. The country has permitted interest payments on private and trade-related debts.

Talks to Start in July

Argentina is expected to formally begin negotiations with the banks next month on restructuring its existing debt and on obtaining $2 billion in new loans.

"The country could run out of cash before the negotiations are complete and some time in the next few months could be in a de facto moratorium on interest payments," said Ronald Mandle, money center bank analyst for PaineWebber Inc., in a recent report.

Argentine government officials have stated repeatedly that unlike Brazil, they do not plan to declare a moratorium on foreign debt, but if they do not have the cash, they will not be able to repay the banks.

However, Argentine presidential elections are scheduled for next year. Analysts think growing support for a moratorium among opposition groups could pressure Argentine President

Baldini Leaves ComFed Mortgage

By PHIL ROOSEVELT

NEW YORK — James G. Baldini, who helped build ComFed Mortgage Co. into one of the largest mortgage lenders in New England, resigned as president on Thursday with little explanation.

Jack C. Zoeller, who joined the Lowell, Mass.-based firm last year as an executive vice president, was immediately named to succeed him.

Under Mr. Baldini, the mortgage unit of ComFed Bancorp expanded from originations of $32.6 million in 1982 to $2.2 billion last year. The firm has the largest share of Massachusetts home mortgage originations, and possibly the largest share of the New England market.

Jack C. Zoeller

A ComFed announcement said Mr. Baldini, 39, was resigning for "personal reasons." But ComFed officials refused to elaborate, and Mr. Baldini could not be reached for comment.

Some New England rivals said they understood that Mr. Baldini was planning to start his own mortgage company. "He's been trying to raise capital for a few months now," one lending executive said.

The ComFed announcement noted that Mr. Baldini has agreed not to compete with the company through the end of this year.

At ComFed, analysts and competitors said, Mr. Baldini had worked especially hard to establish a strong sales force. His own compensation was tied to origination volume; last year it reached $2.7 million, exceptionally high for the industry.

Mr. Zoeller, by contrast, has made his name in capital markets. Hired by ComFed in September to lead secondary market activities, he was previously president of Capital Risk Management Corp., an Iselin, N.J.-based investment banking firm.

In an interview, Mr. Zoeller said that he has been working closely with the sales force ever since he arrived at ComFed.

"The entire sales force and the entire management team is intact," he added. He said that ComFed will seek "continued development of new products and growth in market share."

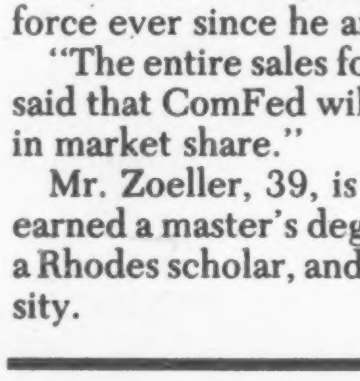
Mr. Zoeller, 39, is a graduate of the U.S. Military Academy at West Point. He earned a master's degree in public policy from Harvard University, was selected as a Rhodes scholar, and received a master's in politics from England's Oxford University. ■

Mortgage Insurance Chief Defends Trade

NEW YORK — William Lacy, president of the Mortgage Guaranty Insurance Corp., became the leader of the private mortgage insurance industry this week amid mounting criticisms of the trade by thrifts and others.

"Today, the private mortgage insurance industry is under attack," Mr. Lacy told a Washington meeting of the Mortgage Insurance Companies of America.

"If we expect to continue our role, we have to do a better job of defending ourselves," he added. "We have let people exaggerate and distort facts."



William Lacy

Mr. Lacy takes the reigns of the trade group as the industry continues to reel from thousands of mortgage defaults in the economically troubled Southwest. And the February collapse of the TMIC Insurance Co., a large Los Angeles-based mortgage insurer, adds to the sea of troubles he faces as he starts his two-year term as president.

In the latest assault on the industry, members of the U.S. League of Savings Institutions have begun complaining that mortgage insurers are lax in making claims payments and that they fail to pay in full.

"There have been a ton of complaints," said Dall Bennewitz, a senior vice president for the thrift group.

A special Savings League panel is exploring the issue, he said, and plans to survey lenders to measure the full extent of the problem.

In an interview, Mr. Lacy asserted that the complaints are coming from a small number of "very loud" lenders, adding that perhaps an arbitration board should be established to handle lender gripes.

— Phil Roosevelt

S&Ls Will Continue to Occupy the Low End of the Playing Field

By HENRY PELTZ

A BILL has recently been introduced in Congress to extend the moratorium that has prevented thrifts from leaving the Federal Savings and Loan Insurance Corp. fund for one year. Due to expire on Aug. 10, 1988, the moratorium seems likely to be extended into 1989 in light of (1) the financial plight of the FSLIC, (2) the likelihood of continuing losses by this insurance arm of the Federal Home Loan Bank system, and (3) the reluctance of Congress to rule on this politically sensitive issue in an election year.

Another nonevent has been the announcement by Bank Board Chairman M. Danny Wall that the special insurance assessments on savings and loans by the FSLIC are likely to be levied for a number of years to come. Mr. Wall softened the message, however, by indicating that consideration would be given to reducing the premium for the more creditworthy institutions.

The root of the FSLIC's problems lies in lax lending and underwriting policies by thrifts, their commitment of substantial funds to speculative real estate projects, and weakening demand for housing and commercial space in various parts of the country.

Clearly, the cost of bailing out thrifts that are dead or dying because of bad management, bad accounting, bad regulation, and even bad legislation will be enormous. Trying to estimate the total cost is an exercise in futility, because that cost will ultimately be determined by the course of economic events, about which no one can be certain. More fruitful, perhaps, is to consider remedies, many of which are already under discussion by the regulators.

'Any remedy is likely to include tighter enforcement of regulations on risk taking by thrifts.'

Any remedy is likely to include tighter enforcement of regulations on risk taking by thrifts and close oversight of thrift managers. Many such regulations already exist, but other new regulations or laws may also be in order.

Problems with Fund Merger

Structural changes, such as the merger of the FSLIC and the Federal Deposit Insurance Corp., are also being weighed in Washington. Given thrifts and banks in reasonably good health, such a merger might make sense. Under current conditions, however, a merger might well result in a dangerous drain on both funds and, hence, accomplish nothing. Another recent proposal is the formation of a new superagency that would take over the insurance function of both the FDIC and the FSLIC.

Based on public utterances from the heads of both funds, and the judgment of the General Accounting Office, the FSLIC appears to have the greatest problems at the moment.

In the private sector, when an insurance company starts to show underwriting losses, premiums are increased and efforts are made to reduce exposure to loss. Should not the FSLIC and the FDIC do the same?

Insurance of deposits has increased during the past 30 years from $5,000 per account to the current $100,000. Perhaps both funds shouldreduce the insured portion of deposits to $25,000 to $50,000 and charge premiums directly to depositors who wish to keep larger balances.

This would obviate the argument by the thrift industry that it should not bear any further increases in deposit insurance rates. Presumably some kind of regulation could also be worked out that would facilitate the levying of insurance premiums on large depositors who invest their funds in thrifts through brokers or investment bankers.

New Limits May Trigger Withdrawals

The fly in the ointment is, of course, that a change in the limits on insurance of accounts might trigger an outflow of savings deposits, especially to the money market funds. These repositories invest principally in U.S. Treasury obligations and other high-grade short-term securities, and therefore need no insurance.

With their low-overhead these funds can pay out a high proportion of their interest income to savers, and because of their substantial liquidity they pose a severe threat to the savings role played by both thrifts and banks. In fact, some observers believe that the savings role of both these financial institutions is becoming obsolete because of these funds.

There may be no ready solution for the money fund problem. Perhaps, in time, if the thrifts can't "lick 'em," they will "join 'em." We have often wondered why thrifts have been eager to offer stock and bond mutual funds to their clientele but not money funds, which would reasonably be expected to protect their savings flows, albeit at a low rate of return to the thrift.

Thrift executives often protest that they are not playing on a level field vis-a-vis commercial banks in terms of deposit insurance. An argument can be made that government deposit insurance is the same commodity whether the deposit is in a bank or a thrift.

This is because failure of either the FSLIC or the FDIC would probably result in a call on the Treasury (for which read the taxpayer). If the U.S. government is, in fact, the insurer, why should the two funds charge different premiums for the same service?

Yet because the banking industry is in better shape than many thrifts, and the Oil Patch seems to be a bigger problem for the thrift industry than for the banking industry, FDIC insurance premiums are lower than those of the FSLIC.

There are other reasons for the disparity in premiums, some relating to past differences in regulation between the two industries and some to the more diversified nature of commercial bank lending and funding (so that banks came through 1980-82 in better shape than thrifts).

In addition, we suspect that deregulation has had a more profound effect on thrifts than on banks and that the adjustment by thrifts to a deregulated environment has been more problematic.

Whatever the reasons, the level playing field problem may not go away soon. ■

LETTERS TO THE EDITOR

Roth Biographer Disputes Reading of Comptroller's Report

To the Editor:

Thank you for reviewing "People's Banker" in your issue of June 3. ["Leveraging Lollipops: Memoirs of a Marketer," page 20] It is gratifying to know that your reviewer, Robert Paul Molay, finds the book "highly readable."

However, while generously crediting Arthur T. Roth for his innovative contributions to U.S. commercial banking, Mr. Molay seems to have misread the report by James E. Smith, former comptroller of the currency, which deals with the failure of the Franklin National Bank.

Smith, whose report to the House Banking subcommittee on financial institutions, supervision, regulation, and insurance is reprinted in full as an appendix in "People's Banker," stated:

"During the five-year period 1963-68, when Roth was chief executive officer, Franklin had no serious problems or extraordinary deficiencies. The troublesome problems with the bank started in 1969.

"Roth was removed as chief executive in July 1968."

The quotation that Mr. Molay took from a bit later in the comptroller's report on the bank's "deteriorating condition," failure to establish confidence, etc., obviously does not apply to Roth. As the comptroller made clear, Franklin's percentage of classified assets to gross capital funds had been reduced to 16.2 by 1969.

This was accomplished under Arthur Roth's leadership, as described in "People's Banker." During Roth's last year as executive, Franklin's stock rose in price from $31.50 to $46.50.

In fairness to Mr. Molay, it is easy to misread the comptroller's report. It overlaps dates, mixes verb tenses, and blurs eras of executive responsibility.

Smith did not like Roth, yet in the context of his total report, Franklin's deficiencies fall on those who succeeded Arthur Roth, several of whom went to prison for criminal acts.

The comptroller's report was an apparent effort to explain his failure to act in spite of warnings from Roth to Smith, the Federal Reserve, the Federal Deposit Insurance Corp., and other regulators and agencies. The comptroller admits that his office "was not sufficiently aggressive" and "might have held meetings with bank management in 1973."

But Roth had been sounding the tocsin since 1972. The Comptroller's office did not take any important action against the bank until the summer of 1974, when Franklin was too far gone to be rescued.

As Mr. Molay notes, comments and reports critical of Arthur Roth are included in "People's Banker." However, the comptroller's report, while critical of Franklin, did not criticize Roth.

Rather, up front, it clearly absolved Roth, if absolution is necessary. Roth was responsible for Franklin's extraordinary success, as the record shows, not for its failure.

Walter S. Ross

Mr. Ross is the author of "People's Banker: The Story of Arthur T. Roth and the Franklin National Bank"

Argentina's Bad Debt May Hurt US Banks as Early as This Quarter

➞ Continued from Page 2

Raul Alfonsin to support an outright suspension of payments. Antonio Cafiero, a leading Peronist candidate for president, has supported a limited moratorium.

"The elections create a degree of uncertainty," a banker said.

Mr. Mandle predicted that, in most cases, the impact on bank earnings of Argentina will be much less than from Brazil.

He said Manufacturers Hanover Corp., with $1.5 billion in Argentine loans, would feel the biggest impact on earnings per share. The analyst forecast that failure of Argentina to pay interest would shave 16.5% off his $8 estimate of Manufacturers' 1988 earnings per share.

BankAmerica Corp., with $673 million in Argentine loans, would feel a 10% impact, Mr. Mandle said.

But Citicorp, with $1.4 billion in Argentine loans, would feel only a 4.5% impact on earnings per share.

Bankers are posturing that the existence of nonperforming loans would make the negotiations more difficult. "It will be hard for Argentina to get new loans if its old loans are on nonaccrual," one banker said.

Many bankers and analysts expect negotiations with Argentina to be tougher than those with Brazil, which have continued since last September and are not over yet. Brazil's lead banks are currently trying to line other banks to participate in a new $5.2 billion loan. The proposed agreement also includes a 20-year rescheduling of $62 billion in existing Brazilian debt.

During his recent visit to New York, President Alfonsin informally started negotiations by urging bankers to reduce interest on existing debt to 4% a year for three years. Currently, Argentina pays a market rate based on the London interbank offered rate plus one percentage point.

Bankers are expected to balk at the proposal.

"I think the banks are fed up with Argentina," said Merrill Lynch's Mr. Cohn. "The talks are likely to be much messier than with Brazil. The borrower is more intransigent, and the economic performance of the country is weaker." ■

Ex-Director of InterFirst Bank Dallas Charged with Fraud in Loan Default

➞ Continued from Page 2

Robert Stewart's office to break the news.

"Buddy, I've got a problem and you have a problem," one banker heard him say.

The former employees say they are unsure how Mr. Cox lost his money. As for the cattle that collateralized most of the borrowings, one of the former employees said: "He [Cox] said there wasn't any cattle. Mr. Cox didn't elaborate. He wouldn't elaborate."

Between 1979 and 1984, Mr. Cox would borrow money from the bank every April to finance cattle operations, the former employees said. By fall, he usually paid back the loan. But in late summer of 1985, Mr. Cox asked to roll the loan over every 90 days, according to the bankers.

Mr. Cox said he was enlarging and diversifying his business, they said. Later that year, he purchased Swift Independent Packing Co., the nation's no. 2 meat processor, they said.

The former employees said that loan officers grew suspicious and decided to visit West Texas to inspect the cattle that were pledged as collateral on all but $10 million of the loans. They were put off by Mr. Cox several times.

One loan officer was reprimanded by his superiors in May 1986 for badgering Mr. Cox, the bankers said.

After Mr. Cox defaulted, InterFirst's lawyers concluded they could get him to pledge his valuable ranch land as additional security. Only then did they learn he already had transferred the most valuable parcels to his father to satisfy a $14 million loan from the summer of 1985.

Mr. Simon, the bankruptcy lawyer, has said that Mr. Cox didn't deliberately mislead the loan officers, because Mr. Cox did not have a clear picture of his financial situation. ■

Prudential-Bache Loses Last Appeal In $3.7 Million Suit Against Citibank

Special to the American Banker

NEW YORK — A state appellate court has upheld dismissal of a $3.7 million suit against Citibank by Prudential-Bache Securities Inc.

The suit claimed Citibank was partly responsible for an embezzlement scheme masterminded by a former Prudential official.

The 3-to-2 decision was filed Wednesday by the Appellate Division of the state Supreme Court, First Department. The minority issued a sharply worded dissent accusing Citibank of "serious banking malfeasance."

The case arose from an $18.9 million scam by John Efler, former head of the Prudential department that dispensed dividends and interest payments to clients. Mr. Efler used accounts at Citibank and Bank Leumi to launder the stolen funds.

Mr. Efler and his coconspirators withdrew cash in amounts called "niners," slightly less than $10,000. Withdrawals over $10,000 would have required filing cash transaction reports with the Internal Revenue Service.

Mr. Efler was sentenced to 20 years in prison in 1984 for his part in the fraud. Eight others also pleaded guilty, including two former Citibank employees who admitted they accepted bribes.

The dissenting opinion charged that the majority on the appellate court "condones what appears to be serious banking malfeasance on the part of the defendant . . ." The cash withdrawals were made with the "connivance" of at least two Citibank employees, the opinion noted.

Also noted in the minority opinion was testimony before a federal grand jury that the branch manager and others at Citibank might have been aware of these accounts. But there was no evidence that these officials had also been bribed, the dissenters said.

The minority opinion concluded that, apparently, the officers and employees at the bank "winked" at checks that were slightly below $10,000.

The majority issued no opinion, but relied on the reasons given by Justice William P. McCooe when he dismissed the case in the lower court. The judge said Prudential wasn't entitled to recover any of its loss because it, not the bank, had been in the best position to detect the fraud. ■

Fed Gives Nod to Thrift For Holding Company

HOLYOKE, Mass. — The Federal Reserve Board has given Vanguard Savings Bank here final approval to form a bank holding company, Affiliated Banc Corp., according to Joseph P. Shiel Jr., who will be chairman and president of the bank and the holding company.

This enables management to move into a "variety of bank-related activities as we continue the successful expansion of the Vanguard Bank network," Mr. Shiel said.

Each share of Vanguard common stock will automatically convert to one share of of Affiliated Banc Corp. common. The stock will trade on the NASDAQ National Market System under the new symbol ABCV.

Affiliated Banc Corp.'s sole subsidiary, Vanguard Bank, is a state-chartered savings bank insured by the FDIC. Headquartered in Holyoke, Vanguard currently serves western Massachusetts through seven banking offices. ■

ations occur to Chris. He has no evidence to support his report and Jim may simply deny the charge if it is made. The successful suitor in this case turned out not to be the multinational customer whose acquisition plans Jim had originally overheard.

Jim is a very popular guy in the group; accusing him in this way could expose Chris to unfavorable repercussions. Finally, bankers hear all kinds of rumors and certainly are permitted to invest in stocks, so where should the line be drawn?

Do you believe Jim violated the law and/or the bank's code of ethics banning trading on insider information?

What should Chris do? What are the likely outcomes of his various options?

Second Mortgage & Home Equity Loans: 1988
— Top Competitors
— Market Growth
— New Business Strategies

A New SMR Research Corporation Study

The second mortgage and home equity market has now reached nearly 25% of all consumer debt — bigger than credit cards and fast approaching the size of the auto loan market.

SMR's new annual study of this market is now available — with greatly expanded coverage. The new study includes:

- **The Top 32 players in the business;**
- **Rank-order lists of the Top 200 banks in home equity outstandings;**
- **Case studies of strategy & positioning of the leading players;**
- **The new concept to sell home equity loans as a direct alternative to first mortgages — an idea with tremendous ramifications;**
- **What's hot — and what's not — in marketing techniques;**
- **New market size and growth projections.**

There's much more — all described in a free Prospectus. To get one, call or write Mark S. Kamm, SMR Research Corporation, 382 Route 46, Budd Lake, NJ 07828. (201) 691-1255.

CORPORATE FINANCE

Major banks in New York are serving the credit needs of most of New York's small-business customers, but credit availability could be improved, especially for small minority-owned enterprises, according to a study by Interface, a not-for-profit research group.______________________8

Maryland National Bank, Baltimore, has given its investment banking subsidiary a green light to build a separate culture, more aggressive and more market-oriented than the rest of the bank. _________________8

Worth Repeating

Perhaps most important, given the troubled economic regions in which they operated, these bankers emphasized profitability and conservative lending, even at the expense of growth.

The Comproller of the Currency in the report, "Bank Failure." [Page 2]

Big Banks Losing Market Share in Business Loans

But Industry Lending Grew 12% Since 1983

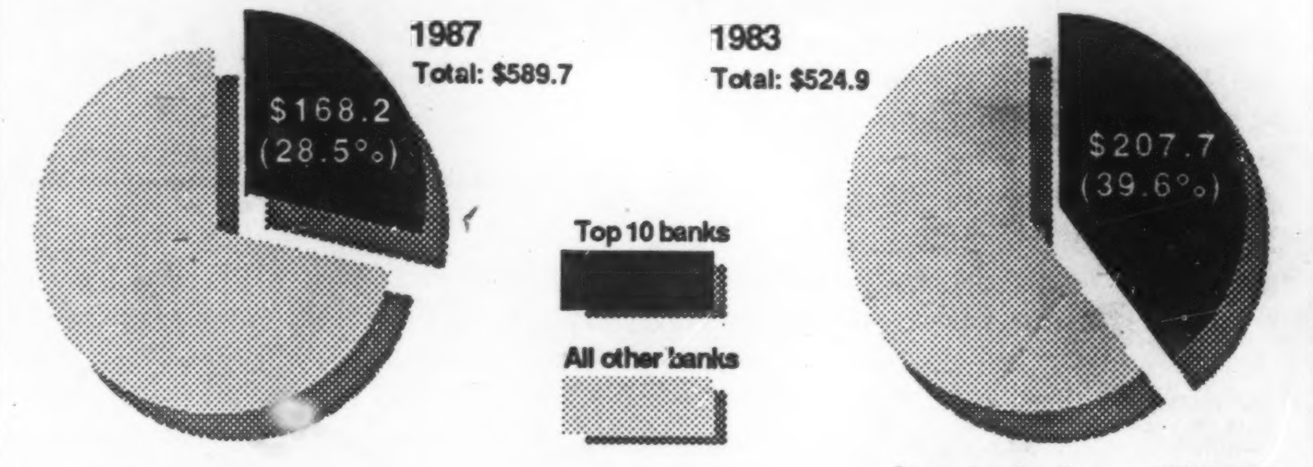
By PHILIP T. SUDO and
L. MICHAEL CACACE

NEW YORK — Commercial loans by banks increased 12% over the last five years, but the nation's largest banks suffered a dramatic decline in market share, according to an *American Banker* survey.

The top 10 banks showed $168.2 billion in business loans on their books at the end of last year, a 19% drop from $207.7 billion at yearend 1983. Their market share fell to 28.5% from 39.6%.

During that same period, banks ranked 11 through 300 saw their business loans grow 32.9%, to $421.5 billion.

Business Loans Held by the Top U.S. Banks
Yearend comparison: 1987 and 1983, in billions of dollars



Source: American Banker and FDIC 1988

Taken together, business loans made by the top 300 — including international and domestic lending — grew 12.3% to $589.7 billion, from $524.9 billion at yearend 1983.

Analysts said the decline among money centers reflected the diminishing profitability of loans to the *Fortune* 1,000 companies, which have turned to the capital markets for funds.

"There's less for money centers to do in the market," said David Cates, head of Cates Consulting Analysts Inc. "Their big clientele doesn't need bank loans anymore."

But Christopher Snyder, president of Loan Pricing Corp., said the decline was not all bad. "To their credit, senior bank executives have been turning away unprofitable business," he said. "They're not just losing share, they're getting tougher."

The overall increase in business loans reflects the growing emphasis on the middle market, where lending spreads are higher and the bulk of the economy's growth has occurred. While business loans at the top 10 banks declined 9.37% from yearend 1986 to yearend 1987, business loans increased 1.26% at banks ranked 11 to 100.

The same trend was reflected in domestic business loans. The 10 largest banks held $85.6 billion at the end of last year, down 12.02% from $97.3 billion at yearend 1986. During the same

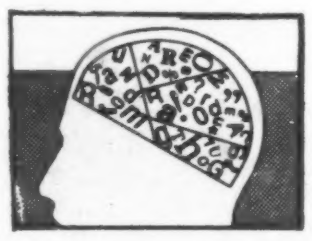
Random Thoughts



By SANFORD ROSE

James Kurt Dew, a White Plains-based consultant who formerly headed Manufacturers Hanover's futures subsidiary, doesn't think that banks should try to capture the liquidity premium by tying their asset and liability rates to Treasuries, as advocated in this column on June 7. The column noted that if a bank finances a six-month asset whose yield is tied to a Treasury of comparable maturity with a three-month liability similarly tied, it is likely, because of the existence of a liquidity premium in Treasuries, to be able to refinance its asset at a lower cost than today's three-month implied forward rate would suggest.

That point is correct, but the strategy is nonetheless dubious, argues Mr. Dew. Suppose, he says, that the prevailing rate for six-month loans is 9%. Then that is the rate at which the bank should lend money, regardless of the current yield on six-month Treasuries.

If the bank adopted a policy of lending six-month money at some spread over Treasuries, then one of three outcomes must ensue: First,

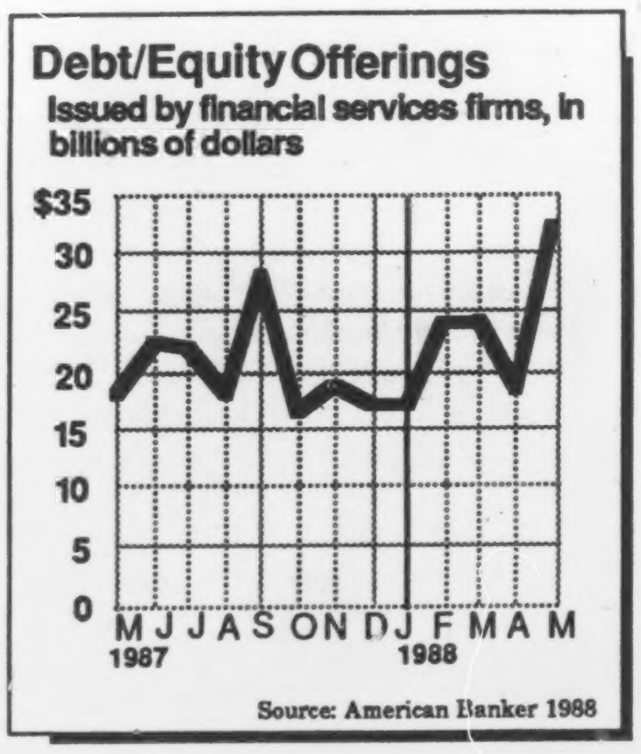
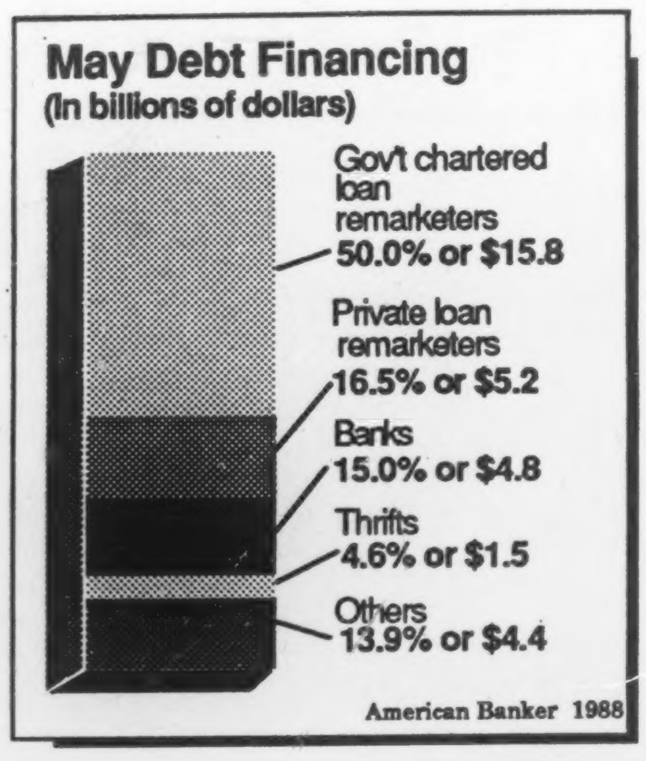
Debt Offerings by Financial Firms Soared in May

By KENNETH J. HICKS

NEW YORK — Debt offerings skyrocketed in May to their highest monthly percentage gain in more than a year and a half, and to the second highest monthly dollar amount since the *American Banker* began tracking financial company credit market activities in 1985.



Source: American Banker 1988



American Banker 1988

May Bank Debt

Amount offered during month ($ millions)

Type of debt	May	April
Straight debt	$3,265	$1,350
Convertible debt	0	0
Straight preferred[1]	150	0
Convertible preferred	0	175
Common stock	11	43
Mortgage-backed[1]	460	100
Other asset-backed[1 2]	800	257

U.S. banking companies only. [1]Includes limited purpose finance subsidiaries. [2]Includes auto, credit card, and other loan receivable-backed issues.

Banking companies and government-chartered loan remarketers led the gainers last month. Among the bank issues: $150 million of preferred stock by the Bank of New York Co., complying with a Federal Reserve mandate in connection with its attempt to take over Irving Bank Corp., and $150 million in rating-sensitive notes by Mellon Financial Corp.

Also during May, the Public Securities Association expressed concern that the proposed capital requirements being considered for banks do not accurately reflect the credit risk of certain obligations and may create market distortions. And Standard & Poor's Corp. came up with a new way to rate high-yield, or junk, bonds.

These are among the findings of May's Raising Capital compilation of major debt and equity offerings by financial services companies. The *American Banker* gathers the data used in the monthly listing from news wires, press releases, and tombstone advertising. Complete listings are in tables on pages 20-22.

After dropping more than 20% in the March-April period, major debt and equity offerings by financial companies jumped 65.4% in May to $31.7 billion. These firms have not posted such a large month-to-month percentage gain since October 1986, when new issues soared more than 200%.

Compared with a year ago, the increase is even higher — 67.2%, from $19 billion in May 1987. Further, last month's dollar total is the highest since the record $32.3 billion in March 1986. (In that month, several firms issued large amounts of mortgage-backed securities, most of which were the extremely sensitive interest only-/principal only (IO/PO) instruments. A sudden hike in interest rates caused heavy losses for the month, including the $275 million by Merrill Lynch & Co. Several other firms reported losses of $20 million to $50 million.)

Banking companies and their subsidiaries issued $4.8 billion in new securities last month, an increase of 74.8% from April's $2.7 billion. Bank debt and equity issues accounted for 15% of the month's total. Compared with a year ago, bank issuance was up 30.7%, from $3.6 billion in May 1987.

Excluding foreign bank issues, U.S. banks brought $3.4 billion in debt to the markets. That is an increase of almost 120% from April, when domestic banks issued $1.6 billion in debt and equity and 12.9% from May 1987.

In the first five months of 1988, banks have issued $15.3 billion of debt, versus $21.1 billion in the same period of 1987, a decline of 27.5%. Bank issues have made up 13% of financial company earnings thus far, compared with 17% in the January-May period last year.

Of last month's domestic bank issues, 41%, or $1.4 billion, were in the form of notes maturing from 1992 to 1998, including $405 million in subordinated and senior notes.

The two-part $150 million preferred stock issue by Bank of New York is intended to help pay for its attempt to take over Irving Bank Corp. The Federal Reserve Board said the banking company had to issue common stock or noncumulative perpetual preferred stock before consummating the deal.

In its order, the Fed stated that net proceeds from the required sale must equal at least 60% of the cash portion of the tender offer. The May 19 offering satisfied those requirements, Bank of New York said.

Made up of $75 million of adjustable-rate preferred stock and $75 million of fixed/adjustable-rate noncumulative preferred, both issues were priced at par to yield 8.87% and 9.25%, respectively. This type of offering starts with a fixed rate and then is adjusted in accordance with one of the major interest rate gauges, such as Libor. Neither issue will pay before Sept. 1, 1988, and both will be redeemed if Bank of New York's tender offer is not successfully completed by Aug. 1.

If the issue remains outstanding after Sept. 1, the adjustable-rate preferred shares will become callable after three years, at prices beginning at 103% of principal and declining to par by 1993. The fixed/adjustable-rate preferred will become callable, also after three years, at par.

Both issues may be converted, under any of three circumstances, into no

Comptroller Compiles Profile of Failure-Prone Bank

By BARBARA A. REHM
Washington Bureau

WASHINGTON — National banks that have failed since 1979 tended — more than their surviving peers — to grow too quickly, to depend too much on collateral-based loans, to make more loans in distant areas, and to allow undue concentrations of credit, according to a study on why banks fail.

Why Do Banks Fail?

How lending characteristics differ between healthy and failed banks

	Healthy Banks			Failed Banks		
Are these characteristics present?	Yes	Somewhat	No	Yes	Somewhat	No
Liberal lending practices	0%	13%	84%	85%	10%	2%
Excessive growth	3	13	84	52	22	24
Overlending	0	11	79	73	12	5
Collateral-based lending	3	32	60	55	27	8
Unwarranted concentrations of credit	0	24	76	37	22	34
Out-of-area lending	3	5	88	23	15	41
Excessive financial statement exceptions	29	34	37	79	16	3
Insufficient proof of collateral	0	39	52	67	22	5

Source: Office of the Comptroller of the Currency study of 260 banks, including 171 that failed since 1979.

The study by the Office of the Comptroller of the Currency is now complete, with the release of its second part on Monday. The first part was released in January.

The latest results show that banks saved from failure usually changed management, improved banking practices and philosophy, were recapitalized, and saw improvement in their local economies. Directors also took a more active interest in banks that were saved.

"Perhaps most important, given the troubled economic regions in which they operated, these bankers emphasized profitability and conservative lending, even at the expense of growth," the study states.

The study, "Bank Failure," is subjective, not scientific, Comptroller of the Currency Robert L. Clarke said in remarks prepared for delivery Monday night to the American Bankers Association's Stonier Graduate School of Banking in Newark, Del. It focuses on 171, or 94%, of the national banks that have failed since 1979; 51 national banks that have been rehabilitated during that period; and 38 national banks that have remained healthy throughout.

The Comptroller's office did not specify percentages for rehabilitated or healthy banks studied, because these institutions were included for comparison purposes only. In all three categories, the majority of the banks have less than $100 million in assets and 80% are in the Southwest or Midwest. Copies of the study are being sent to all national bank managers and directors.

The study indicates that in terms of equity, investors injected an average of $950,000 in new capital per rehabilitated bank, but only an average of $300,000 per failed bank. "Whether a problem bank fails or recovers will often depend on the time it has before its losses completely dissipate its capital," the study said. "They [investors in the rehabilitated banks] undoubtedly bought more time for the banks to complete their recoveries."

Monday's release of the remainder of the study also revealed that banks managing to recover from bad times were more likely to have heeded regulators' advice.

"The rehabilitated banks made a serious or competent effort to meet, and succeeded in meeting, our directives more than twice as often [86% to 41%] as the failed banks did," Mr. Clarke said.

What will the Comptroller's office do with the study results? James E. Horner, a national bank examiner and coauthor of the study, said on Monday that the agency has the tools it needs to ensure safe banking. The problem, he said, lies in making national bank managers understand the severity of response expected of them when presented with enforcement actions by the agency.

The study explained that once the Comptroller's office determined that a chief executive officer lacked ability or integrity, 90% of the rehabilitated banks replaced their CEOs, while 76% of the failed banks did not.

Liberal lending practices were adopted by 85% of the national banks that have failed, while 84% of the healthy banks shunned aggressive loan making, the study found.

In his remarks to the Stonier banking school last night, Mr. Clarke again tried to debunk the notion that record bank failures are due to downturns in energy, real estate, and agriculture.

"Banks are able to remain healthy institutions throughout economic fluctuations by establishing and maintaining strong internal policies, systems, and controls," he said. It was the second time in six months that the national bank regulator downplayed the correlation between bank failures in the Southwest and Midwest and the economic problems plaguing those regions.

Nonetheless, more than half the bank failures last year occurred in the Southwest, where banks are heavily committed to the devastated energy, real estate, and agriculture industries.

Bank management and directors have much more effect on the bank's performance than the economy, Mr. Clarke told the Stonier audience.

In the first half of the study, the Comptroller's office found that only 7% of the national banks closed since 1979 were taken down exclusively by economy-related problems. ■

IN THE NEWS

US League Reverses Stand

NEW YORK — The U.S. League of Savings Institutions has reversed its stand on who should be able to own the Federal Home Loan Mortgage Corp.'s preferred stock. Two weeks ago Sen. Alfonse M. D'Amato, R-N.Y., introduced a bill that would allow the public to own Freddie Mac's preferred stock, which was trading at $82.50 on Monday afternoon. The league said it supports the pending legislation.

"A preponderance of analysts believe there will be an increase of value" in the shares if they are available to the public, league spokesman Mark Clark said. The league previously had favored the current rules on ownership, which allow only thrifts and market makers to buy and sell the 15 million shares of Freddie Mac preferred stock.

MasterCard Picks Charities

NEW YORK — MasterCard International was scheduled today to announce the six national charities that will benefit from its 1988 cause-related marketing campaign. MasterCard earmarked $2.8 million of its fourth-quarter sales volume for charitable causes in 1987. The program gives cardholders a chance to vote on how the donation pool is distributed, but each participating charity is guaranteed a minimum of $150,000.

MasterCard said the choice of beneficiaries, based on an analysis of consumer preferences, will be the Alzheimer's Association, the American Cancer Society, the American Heart Association, the American Red Cross, the Just Say No Foundation, and the National Committee for the Prevention of Child Abuse.

Primary Dealer Resigns Status

LOS ANGELES — First Interstate Bancorp said its government securities subsidiary has resigned as one of 42 primary dealers. First Interstate Capital Markets Inc. gave up its primary dealer status on Friday. Primary dealers are required to make continuous markets in government securities and are the buyers and sellers when the Federal Reserve carries out open-market operations. First Interstate, with $51.7 billion in assets, said the resignation is part of the restructuring program announced last October.

Clarifications

A revised ranking of how money center banks performed in 1987 was published on June 16 (page 2). The accompanying text implied that the Bank of Boston had supplied inaccurate data, necessitating the revision. Actually, the error occurred because of a misunderstanding between the *American Banker* and Cates Consulting Analysts Inc., which supplied the data.

□

An article on June 6 ("Capital Rules to Put Big Banks Under Gun," page 2) said that, under proposed capital rules, Continental Illinois Corp.'s core capital on Dec. 31, 1987, was 1.29% of assets, well below the 4% minimum that would be required by 1992. The figure was taken from a table supplied by IBCA Banking Analysis Ltd. A correction on June 8 said that IBCA understated the bank's ratio. However, in its report accompanying the table, the research firm noted that when convertible preferred stock owned by the Federal Deposit Insurance Corp. is counted, Continental's ratio increases to 2.62%. The report fully explained the special circumstances surrounding the FDIC's investment in Continental. ■

House Approves Bill Governing Ads, Disclosures for Home Equity Loans

By JAY ROSENSTEIN
Washington Bureau

WASHINGTON — The House on Monday approved by voice vote legislation intended to protect consumers from the pitfalls of home equity lines of credit.

In March, the Senate passed similar home equity loan protections, and other consumer legislation, as part of a big package that included expanded powers for financial institutions.

It appears likely that a home equity bill will be approved by Congress this year, but it may be several months before a final agreement is reached in a House-Senate conference committee or otherwise.

The House bill would require lenders to disclose fees and terms when a consumer applies for a home equity loan. It also would set standards for advertising.

Another section would prohibit lenders from unilaterally changing the terms of a loan during the life of the contract, with some exceptions.

The bill also would require that interest rates on most variable-rate home equity loans be tied to an index outside the control of the lender.

The Senate, according to a staffer on its Banking Committee, is likely to continue pressing for consumer legislation as part of a comprehensive bill. That move is designed to put additional heat on the House to agree to expanded powers for banks and other broad measures.

The staffer noted that home equity loan legislation, "truth in savings" bills, and other consumer measures have widespread support in Congress.

American Express To Step Up Promotion Of Insurance Plan

By LAURA GROSS

NEW YORK — American Express is beefing up its effort to take a larger share of the retail shopping market, an arena dominated by the bank cards.

At a press conference this morning, American Express Travel Related Services Co. is scheduled to unveil a $2 million advertising campaign to intensify promotion of its six-month-old Purchase Protection plan.

Introduced as a test program, Purchase Protection automatically insures most retail goods bought with the card for up to $50,000 against theft, fire, accidental loss, or damage for 90 days after the purchase.

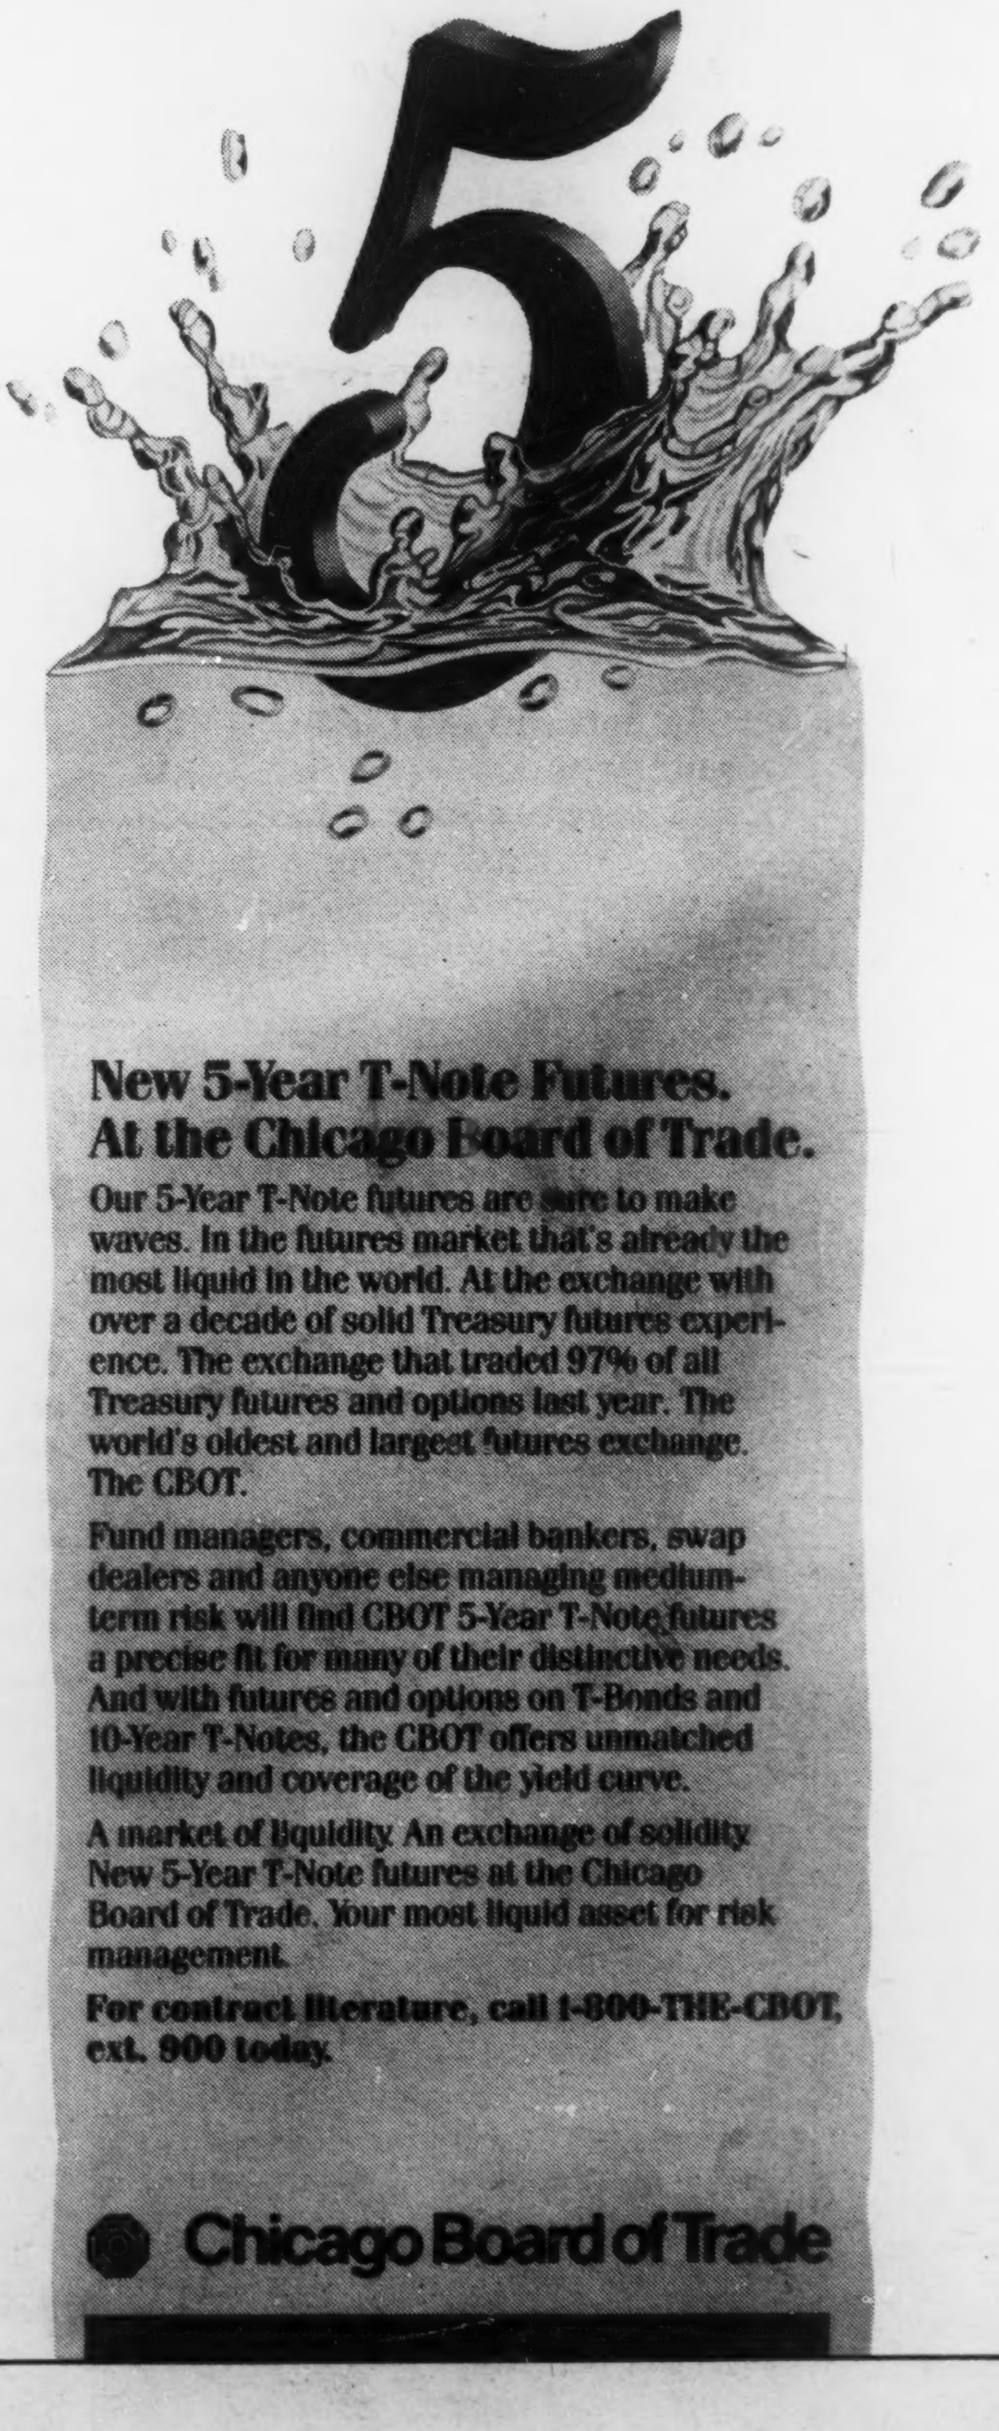
A SOLID ADDITION
TO THE WORLD'S MOST LIQUID MARKET.



**New 5-Year T-Note Futures.
At the Chicago Board of Trade.**

Our 5-Year T-Note futures are sure to make waves. In the futures market that's already the most liquid in the world. At the exchange with over a decade of solid Treasury futures experience. The exchange that traded 97% of all Treasury futures and options last year. The world's oldest and largest futures exchange. The CBOT.

Fund managers, commercial bankers, swap dealers and anyone else managing medium-term risk will find CBOT 5-Year T-Note futures a precise fit for many of their distinctive needs. And with futures and options on T-Bonds and 10-Year T-Notes, the CBOT offers unmatched liquidity and coverage of the yield curve.

A market of liquidity. An exchange of solidity. New 5-Year T-Note futures at the Chicago Board of Trade. Your most liquid asset for risk management.

For contract literature, call 1-800-THE-CBOT, ext. 900 today.

➼ Continued from Page 1

the Treasury yield plus the spread equals the going rate of 9%. In that case, lending at a spread over the Treasury rate will work, but only because it is an empty strategy, resulting in loans that fetch the same yield as at institutions not lending at a spread over Treasuries.

Second, the Treasury yield plus the spread is greater than the going rate of 9%. In this case, the bank loses customers because it is an above-market lender. And third, the Treasury yield plus the spread is less than 9%. In this instance, the bank can make all the loans it wants, but it is throwing away the difference between 9% and its actual lending rate.

In Mr. Dew's opinion, the best way to collect the liquidity premium is off balance sheet. One feasible method is to match fund the loan at six months at prevailing rates and then purchase a three-month Treasury in the futures market three months hence.

If the liquidity premium that has been shown to exist in the Treasury cash market is also present in the futures market, the bank gets to buy the contract on favorable terms. That is, it gets to buy at a lower price (higher yield) than that at which it is able to sell an offsetting contract three months later when the futures rate will have converged to the spot rate and the liquidity premium will have disappeared. Thus, despite some yield-curve risk, on average, the bank can use this approach to supplement its credit spread with a funding profit.

Mr. Dew adds that when a bank tries to collect the liquidity premium through a balance sheet mismatch, it is in effect doing so at the expense of its customers. It is far more prudent, he counsels, to try earning the premium in the more impersonal futures or forward markets.

□ □ □

The principal avowed reason for securitization of loans is the desire to escape onerous capital taxes. The level of bank capital taxation is a function of both the implicit marginal tax rate and the ratio of equity to assets.

In recent years, there has been a huge rise in the required equity-asset ratio, which has greatly increased the burden of capital taxes. Many banks contend that this burden is inequitable. Every bank is required to capitalize itself as if it had an average set of risks — that is, average in terms of the industry-wide record of chargeoffs and nonperformers. It is pointed out, however, that about 80% of banks have manageable chargeoffs while only 20% are in trouble.

Thus capital is being inefficiently distributed; it is not in place to absorb the most worrisome risks. The good banks have too much, the bad banks too little. It is therefore natural for many banks to gravitate to securitization, since loan sales afford a method of increasing income without retaining assets, helping banks to earn enough on those allegedly overstuffed capital cushions.

Can securitization achieve this result? It is axiomatic that banks must securitize on a nonrecourse basis. Any legal recourse to the originating banks necessitates capital, which of course vitiates the exercise.

Mindful of this fact, banks have been able to devise a structure for selling retail assets with reasonably predictable loss experiences which puts a lien on future bank earnings and thus on future capital accumulations, but requires no current capital allocation. Such a structure, known as a spread account, has facilitated the profitable sale of a sizable amount of retail paper.

For a variety of well-known reasons, this structure cannot yet be replicated with wholesale assets that have highly unpredictable loss experiences. Securitization of C&I loans has not emerged from its infancy. It is largely confined to supposedly nonrecourse sale of whole loans, mostly by money center banks.

It has been argued that these loan sales benefit both buyers and sellers. Mutuality of benefits could result from tax as well as capital arbitrages. Taxable originators of loans may find it unprofitable to hold paper which in the hands of tax-exempt warehousers like pension funds would yield sufficient a after-tax returns.

But the capital arbitrage is deemed to be more important. Institutions with high capital requirements may find it advantageous to sell to those that are currently required to hold less capital per dollar of assets (foreign banks) or to those that have the same capital requirements but, having excess capital, are better able to satisfy these requirements (regional banks).

Even so, it is difficult to figure out how the loan-sales market can survive and flourish. It is well known that a market cannot long endure if buyers and sellers have vastly different informational endowments. If sellers of loans withhold detrimental information on their credits, and buyers have no cost-effective way of obtaining this information, viable trading cannot be sustained.

Indeed, the economic theory of agency would argue that, given wide disparities in information, sellers of loans must offer buyers higher yields, all else being equal, than they as originators are willing to accept. Instead the money center banks have thus far been able to get banks and nonbanks to accept lower yields and have pocketed the loan skim.

It has been alleged that some key characteristics of the loan-sales market tend to mitigate the problem of dissimilar information endowments. First, it is a relatively short-term market, allowing all parties to react to adverse information reasonably quickly. Second, most sales have involved the loans of companies with investment-grade ratings — ratings available to buyers at almost zero cost. And, third, most sales have been made by banks which themselves have good credit ratings and a compelling incentive to avoid "dumping" bad loans.

However, the more cynical observers reject these reasons, pointing out, among other things, that money center banks have begun selling the loans of other than investment-grade borrowers. These observers attribute the survival of the loan-sales market to the existence of a form of covert or implied recourse. That is, money center salesmen of paper have in effect been assuring customers that they would take the paper back if some nasty surprise occurred. Thus the market is said to depend on an imaginative circumvention of federal capital requirements.

Securitization via the sale of whole C&I loans would seem to be a self-limiting venture. If the sale is truly without recourse, the seller must soon confront the agency or moral hazard problem — the buyer's fear that adverse information may be withheld, a circumstance that will ultimately force him to demand a premium from the originator (unless, of course, he can bridge the informational gap by getting cheap access to an objective, reliable credit model with which to evaluate and monitor the purchased loans).

If, on the other hand, the sale is made with implied recourse, the regulators must eventually argue that the loan is a contingent liability of the originating bank, necessitating the full and perhaps excessive allocation of equity support.

□ □ □

Some highlights from an OCC study of 162 national banks that failed from 1979 to 1987: Although 81% of the failed banks operated in depressed economic environments, this environment was the sole cause of failure in only 7% of the cases. Adverse economic conditions simply threw into sharper relief those problems of deficient management or policies that might have remained dormant in happier economic circumstances.

While not the sole cause of failure, an adverse economy was a significant causal agent in 35% of failures. And this percentage increased over time. From 1979 through 1984, depressed economic conditions were a significant factor in only 21% of the failures. In 1985-87, the environment was a significant influence in 39% of the failures.

The OCC study identifies oversight and management deficiencies as the primary causes of bank failure, appearing as significant factors in 89% of the cases. In 81% of the failures, management either neglected to establish loan policies or was unable to secure compliance with the policies that were established.

The study lays special stress on the derelictions of boards of directors, noting that "nearly 60% of the failed banks were judged to have directorates that either lacked necessary banking knowledge or were uninformed or passive in their supervision of the banks' affairs."

Nearly one third of the failed banks were newly formed institutions, established during or after 1981. The problems that predisposed these banks to failure are somewhat different from those that doomed the older institutions.

Failed new banks are more likely than older institutions to rely on volatile, high-cost liabilities. They also tend to be saddled with greater fixed asset and nonfunding expenses — reflecting, in many cases, the high cost of entry into established markets.

These elevated cost burdens tend to encourage overly aggressive behavior. Thus excessive loan growth was a much bigger problem at new banks than at older institutions. And the new banks were more likely to suffer from the importunities of super-aggressive boards of directors.

The OCC study points out, however, that an aggressive board may also be an uninformed or inattentive board. It can emphasize growth and expansive income-generating policies without keeping close track or even knowing of the particular activities of its management. It is thus at the same time unacceptably aggressive and unconscionably passive. ■

Data Source: All data are provided to American Banker by **ADP Data Services Division, New York,** from their data base of the Federal Regulatory Report of Condition (RC) and Report of Income (RI). ADP restates the 1986 data on a pro forma basis for mergers in 1987. **Business Loans** are total commercial and industrial loans, and are taken from Schedule RC-C of the Report of Condition. Data are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on Schedule RC-C are: Column A—Consolidated Bank— item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees). **Bad Business Loans** are total business loans that are 90 or more days past due plus total business loans placed on a nonaccrual basis. Data are from Schedule RC-N, item 3a + item 3b (Columns B + C). **Bad Business Loans/Business Loans** is the ratio of bad business loans to total business loans, expressed as a percentage. **Total Loans** are loans and leases, net of unearned income and are from RC-Balance Sheet, line 4.a. **Total Assets** are total consolidated assets from RC-Balance Sheet, line 12.

Data Source: All data are provided to American Banker by **ADP Data Services Division, New York,** from their data base of the Federal Regulatory Report of Condition (RC) and Report of Income (RI). ADP restates the 1986 data on a pro forma basis for mergers in 1987. **Business Loans** are total commercial and industrial loans, and are taken from Schedule RC-C of the Report of Condition. Data are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on Schedule RC-C are: Column A— Consolidated Bank— item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees). **Bad Business Loans** are total business loans that are 90 or more days past due plus total business loans placed on a nonaccrual basis. Data are from Schedule RC-N, item 3a + item 3b (Columns B + C). **Bad Business Loans/Business Loans** is the ratio of bad business loans to total business loans, expressed as a percentage. **Total Loans** are loans and leases, net of unearned income and are from RC-Balance Sheet, line 4.a. **Total Assets** are total consolidated assets from RC-Balance Sheet, line 12. **(a)**— On 2/1/88, Peoples National Bank and 212th-ranked Old National Bank, Spokane, merged under Peoples' charter and with a new title, U.S. Bank of Washington N.A.

Data Source: All data are provided to American Banker by **ADP Data Services Division, New York,** from their data base of the Federal Regulatory Report of Condition (RC) and Report of Income (RI). ADP restates the 1986 data on a pro forma basis for mergers in 1987. **Business Loans** are total commercial and industrial loans, and are taken from Schedule RC-C of the Report of Condition. Data are consolidated to include both domestic and foreign offices. Loans to both domestic and foreign businesses are included. The appropriate line reference numbers on Schedule RC-C are: Column A—Consolidated Bank— item 4.a. (commercial and industrial loans to U.S. addressees) and item 4.b. (commercial and industrial loans to non-U.S. addressees). **Bad Business Loans** are total business loans that are 90 or more days past due plus total business loans placed on a nonaccrual basis. Data are from Schedule RC-N, item 3a + item 3b (Columns B + C). **Bad Business Loans/Business Loans** is the ratio of bad business loans to total business loans, expressed as a percentage. **Total Loans** are loans and leases, net of unearned income and are from RC-Balance Sheet, line 4.a. **Total Assets** are total consolidated assets from RC-Balance Sheet, line 12.

Commercial Loans Up 12% Since '83; Big Banks Losing Market Share

➛ **Continued from Page 1**

period, banks ranked 11 through 100 gained 1.44%, to $175.6 billion.

"The last five years has been the period of the entrepreneur," who typically turns to smaller banks for financing, Mr. Snyder said.

Mr. Cates said, "The money centers have tried to offset that by shifting to the middle market as well, but that hasn't made up for the loss of the *Fortune* 1,000."

Foreign-Owned US Banks

Foreign-owned U.S. banks still find it profitable to lend to the nation's largest companies. They recorded a 6.25% gain in business loans during the last year, to $35.7 billion. Five years ago, they held $23.6 billion.

"With their strong price-to-earnings ratios, the foreign banks have a lower cost of capital," Mr. Cates said. "Their internal cost of funds is cheaper, they have triple-A ratings that lower their worldwide funding cost, and they have characteristically low overheads. You put all those factors together, and they can make money."

Mr. Cates noted, however, that the figures for business loans do not measure loans originated for the purpose of securitization and syndication — roughly $33.8 billion for nine of the largest banks at the end of 1987, according to *Asset Sales Report.* Nor do the figures reflect the unbooked exposure represented by standby letters of credit.

Looking ahead, Mr. Snyder noted that commercial and industrial lending figures for 1988 already have shown dramatic improvement over last year, thanks to a surge in export sales and the winding down of the economic growth cycle.

"Volume only booms toward the end of the business cycle," he said. "That's when banks become the lender of last resort. Since March, C&I lending has been booming. Most banks are either ahead of their projections or dead-even, depending on how optimistic they were. It doesn't take a lot to see that 1988-89 will be good years."

Other highlights of the survey:

- Citibank maintained its status as the top business lender with $31.9 billion in its portfolio at yearend — despite a 10.6% drop from the previous year. The nation's largest bank also retained its No. 2 position in domestic business loans, reporting $9.9 billion at the end of 1987, down 18.4% from $12.2 billion a year earlier.
- Bank of America passed Chase Manhattan Bank as the second largest bank in business loans by virtue of a slower rate of decrease. The San Francisco giant had $22.3 billion in C&I loans in 1987, down 7.1% from 1986, when it ranked third. Chase, which fell one notch to third place, reported $21.7 billion, down 13.6% from $25.1 billion the year before.
- Manufacturers Hanover Trust Co. ranked fourth again, with $19.1 billion, down 12.3%. It remained the nation's top bank in domestic lending, with $11.1 billion at yearend, despite a 14.85% decline from the end of 1986.
- Among the top 10 banks, Continental Illinois National Bank and Trust Company of Chicago had the lowest ratio of bad business loans — 2.36% of its total business loans. Bank of America followed with 3.38%. The highest ratios in the top 10 were at Security Pacific National Bank (11.15%) and Chase Manhattan (10.04%).
- Boston Safe Deposit & Trust Co., a subsidiary of Shearson Lehman Hutton Inc., had the largest increase in business lending among the top 300 banks, as its C&I loans increased fourteenfold to $486 million at the end of 1987, from $35 million a year earlier. The bank ranked 166 over all.

Rounding out the top five in terms of percentage gain were National Bank of Alaska, Anchorage, with a 151% increase to $492 million (ranking 162); Banco de Santander, San Juan, Puerto Rico, up 90% to place 214 with $334 million; Bank of New England-Old Colony NA, Providence, R.I., ranked 282, with a 74% rise to $217 million; and Tokai Bank of California, Los Angeles, a subsidiary of Tokai Bank Ltd., Tokyo, with a 72% gain to $847 million (ranking 101).

Tokai Bank had posted a 157% in business lending the previous year, the second largest gain in business lending among the top 300 banks. The boost had pushed it up 130 places to rank 160. ■

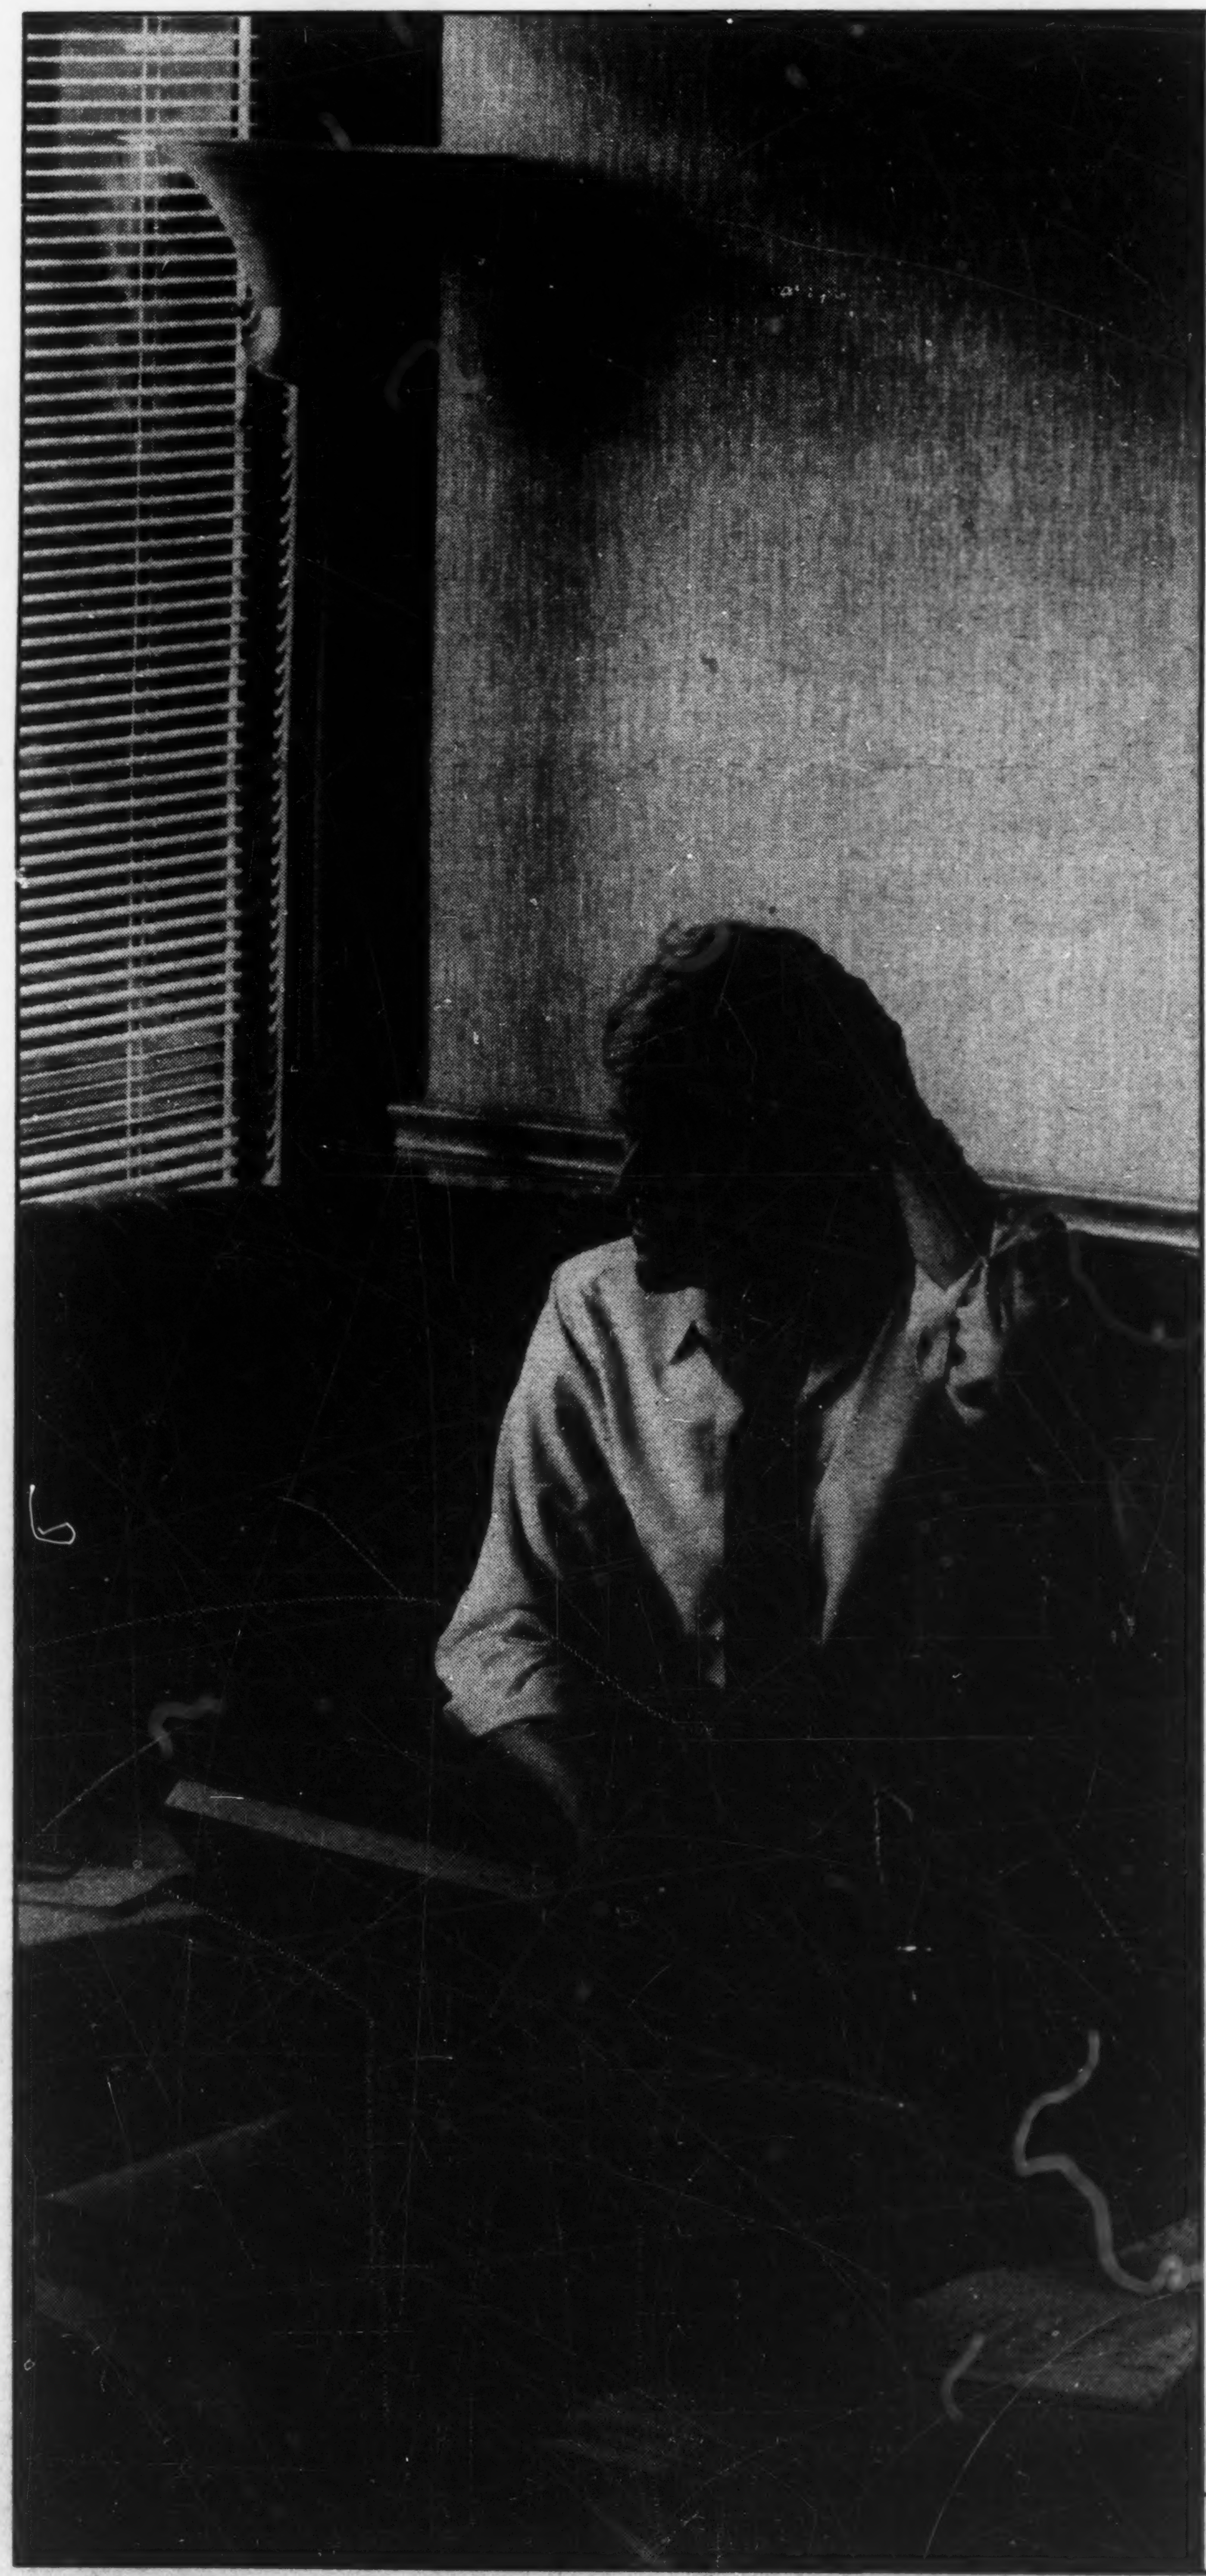
NATIONWIDE BANKING: Michigan legislation providing for nationwide interstate banking goes into effect today.



THE BOARD SAID INCREASE ASSETS. . .
THE BOARD MEETS TOMORROW.

Reach your volume goals safely, surely with GE Capital's consumer loan package.

You're supposed to build the assets, without adding costs. Sure, you could make plenty of loans. . .if you could build enough branches, cover enough markets. But how can you meet your volume objectives without leaving town?

You make one phone call. To GE Capital. 1-800-243-2222. You ask about participating in our consumer loan origination program. A program that allows you to tap into our national network of more than 300 manufacturers and 2,000 dealers in markets that we know better than anyone — markets like recreational vehicles and pleasure boats. That network depends on GE Capital for inventory financing . . . and then generates the retail volume that can immediately build you quality assets and diversify your risk.

Our consumer loan origination package expertly qualifies buyers *based on your lending criteria.* All the details — the dealer training, marketing materials, credit investigations, credit determinations, and timely funding — are handled by GE Capital. You get the paper you want.

One phone call, and you immediately add volume and diversify your risk. All on your terms. And all without adding costs.

So bring on the board meeting. Now you know how to add the dollars.

An American Banker Survey

Scale Tips Toward Consumer Lending

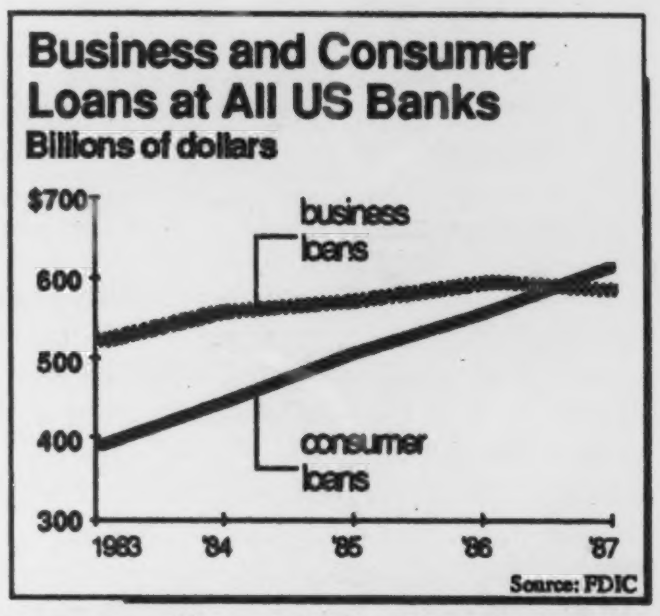
By KENNETH J. HICKS

NEW YORK — Commercial banks now hold more consumer loans on their books than business loans. Over the past five years, consumer loans at banks grew four times faster than business loans.

From yearend 1983 to yearend 1987, consumer loans at all FDIC-insured commercial banks grew more than 50%, from $391.9 billion on Dec. 31, 1983, to $614.3 billion on Dec. 31, 1987. Over the same period, business loans at banks were up only 12.3%, from $524.9 billion at yearend 1983 to $589.7 billion at yearend 1987.

These are some of the findings of a new *American Banker* survey of the top 300 commercial banks in consumer loans. Also included is a listing of the top 200 banks in home equity lending.

Data for this survey were taken from the federal regulatory report of condition, or call report, for Dec. 31, 1987, and were provided to the *American Banker* by ADP Data Services Division, New York. The Dec. 31, 1987, call report required banks to report their home equity lines of credit for the first time.



Business and Consumer Loans at All US Banks
Billions of dollars

Source: FDIC

Consumer loans, as defined by the *American Banker*, encompass mortgage loans, including home equity lines of credit, and credit card loans. Also in this category are all other loans to individuals for household, family, and other personal expenditures — including single-payment, installment, and student loans.

Last year, consumer loans at the top 300 banks increased 11.3% to $364.7 billion. At all FDIC-insured banks, consumer loans rose 10.1%.

On the other hand, as reported in the *American Banker* on June 21, business loans at the top 300 banks in lending to business fell 2.03% last year to $452.8 billion on Dec. 31. At all FDIC-insured banks, business loans were down 1.9% last year.

Industry observers believe the

Silver Lining for American S&L?

Freddie Mac Stock Sale May Ease Thrift's Takeover

By JIM McTAGUE
Washington Bureau

WASHINGTON — American Savings and Loan Association, Stockton, Calif., the nation's largest insolvent thrift, would be the biggest beneficiary if Congress allows the public to buy Freddie Mac preferred stock — and the public bites.

Analysts claim the preferred stock of the Federal Home Loan Mortgage Corp. would trade between $100 and $250 per share if current buying restrictions are lifted.

Sen. Alfonse M. D'Amato, R-N.Y., recently introduced legislation that would broaden the ownership of Freddie Mac preferred stock, touting the measure as a painless way to raise new capital for the thrift industry. Freddie Mac stock is owned by 2,900 institutions, including a number of insolvent institutions. The Senate Banking Committee holds a hearing today on that legislation.

American Savings and Loan Association owns more Freddie Mac preferred

Brazil Debt Plan Faces Resistance from Regional Banks

By BART FRAUST

NEW YORK — Brazil and its lead creditor banks are on the verge of signing an agreement that will end the period of tensions sparked by Brazil's declaration of a debt moratorium in February 1987.

Bankers close to the steering committee of 14 creditor banks around the world said official talks with Brazil have concluded. The banks are now discussing how to allocate their portion of $5.2 billion in new loans to Brazil. The signing of the accord is imminent, they said, although as of Wednesday afternoon, it had not yet been consummated.

The lead banks will now attempt to sell the agreement to the 600 banks worldwide that have previously lent money to Brazil, the developing world's second largest creditor after Mexico.

"It will be a very, very hard sell," said Lawrence Cohn, money center bank analyst for Merrill Lynch & Co.

The Brazilian moratorium was a pivotal event in the international debt crisis, that began in 1982. This declaration convinced the largest banks in the U.S. to take massive reserves against their foreign debt, resulting in the banking industry's worst year since the Depression.

In the wake of the moratorium, large regional banks here turned their backs on this type of lending and moved to eliminate Third World debt from their books any way possible — through debt-for-equity swaps, sales to the secondary market, and outright chargeoffs.

Creditor banks have already received interest payments from Brazil for the fourth-quarter 1987 and first-quarter 1988 as part of a short-term financing ironed out earlier this year. But, pending the latest agreement, banks have not included these funds as income.

For the largest creditor banks, Brazil's return to the international financial fold provides needed relief, particularly as the prospect grows that billions of dollars in Argentine loans will become nonperforming this year.

"A comprehensive Brazilian agreement could thus go a long way toward bolstering worn capital bases and alleviating a psychological overhang for share prices of the banks most affected," said James J. McDermott Jr., executive vice president of Keefe, Bruyette & Woods Inc.

Under the accord, about $62 billion in medium-term and long-term Brazilian debt will be rescheduled over 20 years. During nine months of negotiations, bankers argued that the $5.2 billion in new loans should be linked to Brazil's compliance with economic targets expected to be set by the International Monetary Fund in August. Brazilian negotiators sought to avoid any hint that their country was going to operate under the thumb of the IMF.

Under a compromise worked out during the talks, Brazil will receive $4.6 billion in loans in two installments without having to meet IMF targets. A final disbursement of $600 million will be made only if Brazil meets the targets or if banks holding 85% of Brazil's loans agree to waive that requirement.

Creditors are also nearing a compromise with Brazil on the question of whether they are entitled to seize Brazilian assets held abroad if there should be another debt moratorium. Brazil had earlier balked at this proposal.

The accord reduces Brazil's interest payments on existing debt. The $62 billion in existing Brazilian debt will be rescheduled over 20 years at 0.8125 percentage point over prevailing domestic interest rates or the London interbank offered rate, depending on the individual bank's preference. At present, Brazil pays 1.7 percentage points over Libor.

The $5.2 billion in new loans will be pegged at the same interest rate as the old loans but have a maturity of 12 years. For five years, Brazil will not have to make any principal payments.

As inducements to attract U.S. regional banks to the package, there will be increased opportunities to convert Brazilian debt into equity. The potential for these transactions makes lending more attractive by providing banks with options for eliminating the debt from their books. Third World countries, concerned about foreign corporations' gaining control over their economies, have restricted the number of swaps available to banks.

Regionals Slam the Door

Even with these incentives, selling the agreement to other banks will be a problem, analysts and bankers said. Large U.S., Japanese, and European banks with vested interests in Brazil will agree to new lending. The 14 primary banks led by Citibank will make about 40% of the loans, analysts said. But regional U.S. banks, once active participants in international lending, are unlikely to come along this time.

"The chances are very slim if any," said Susan Carr, manager of investor relations at NCNB Corp., Charlotte, N.C., when asked if her bank plans to participate in the new Brazilian loan or future Third World credits.

"For the foreseeable future, no," said Bruce Crooks, spokesman for the Fleet/Norstar Financial Group, Providence, R.I., in response to the same question.

Mr. Cohn of Merrill Lynch said his best guess is that the steering committee will be able to attract no more than $4.5 billion in new loans for Brazil.

However, Stephen Berman, bank stock analyst for County Securities USA, said he thinks regional banks can be convinced to make new loans, particularly with the debt-for-equity incentives.

"What regionals say and what they do are not always the same," he said.

Mr. McDermott said that the agreement will add a total of about $1.6 billion, representing two years' interest, to the coffers of the 10 U.S. banks with the largest Brazilian exposures.

Over the next several months, the banks will have to decide whether to include the interest as income or use it to reduce the principal of existing Brazilian loans.

Mr. Cohn said most of the money center banks will record the interest as income. He said he would not be surprised if banks looking to exit from the Third World loan market — he mentioned First Chicago Corp., Continental Illinois Corp., and Security Pacific Corp. — decide to use the funds to reduce the principal.

Mr. Berman said using the funds to reduce principal will send a bad signal

Fed Rejects GAO Criticisms, Defends Reserves for Foreign Loans

By BARBARA A. REHM

Washington Bureau

WASHINGTON — The Federal Reserve Board on Wednesday rebuffed the General Accounting Office's critical review of international bank supervision by unanimously endorsing existing bank reserves against foreign loans.

Last month, congressional investigators at the GAO concluded in a study that U.S. banks are overstating the value of loans to Third World countries by at least $28 billion. Reserves for these loans should be increased to $49 billion from the paltry $2.3 billion that bank regulators have required to date, said the GAO.

Regulators should rely less on bank examiner judgments about loan repayment and more on the value assigned these loans by the secondary market, the GAO continued. Ignoring the devaluation of loans to foreign countries inflated first-quarter bank profits, the group added.

The Fed, while declining to comment on specific numbers, faulted any plans to use the secondary market to evaluate Third World loans.

"The secondary market basically reflects the sale price for assets that are being sold on an expedited basis by banks exiting the business of lending to developing countries," the central bank said. "It provides little useful information about ultimate collectibility of the loans being sold."

In response to the GAO's calls for more reserves against foreign loans, the Fed fell back on its work to improve overall capital levels. More than two years of work should be completed by yearend as the Fed and other bank regulators finish up an international effort to tie bank capital to asset risk.

"The emphasis on primary capital has been considered the more appropriate focus of supervisory attention," the Fed explained, "since the reserving process per se involves only a transfer of funds and does not increase the total resources available to banks to absorb losses."

The Office of the Comptroller of the Currency agrees with the Fed, according to Edwin J. Clock, deputy comptroller for international relations and chairman of the Interagency Country Exposure Review Committee. The committee, which includes representatives from all the banking agencies, assesses the riskiness of lending to specific countries.

The Comptroller's response to the GAO study will be similar to the Fed's and presented to Congress soon, Mr. Clock said in an interview.

Rep. Jim Leach, R-Iowa, who released the GAO study on May 12, responded Wednesday to the Fed's action: "Inconsistent regulation appears to be the bane of American banking."

The primary capital of the nation's largest 24 banks has increased $33 billion since 1982, the Fed said, adding that the ratio of problem loans to capital has fallen to 97% from 195%.

The GAO report said regulators should expand the number of loan classifications requiring reserves. Only foreign loans tagged "value-impaired" or "loss" require reserves or writedowns by banks. And only 2% of the $108 billion in outstanding foreign loans by U.S. banks fall into these categories.

But the Fed vetoed any increase in the number of categories requiring reserves. "The magnitude of any eventual loss is highly subjective," the Fed said. Bank management, not bank regulators, should decide whether a marginal borrower will remain current or default, the Fed argued.

Mr. Leach said the Fed's belief that banks are best suited to determine loan-loss reserves is a "nutty cop-out of regulatory accountability."

Regulators' slapping labels on loans "entails a significant risk of creating a self-fulfilling prophecy," according to the Fed. Bank examiners report when a bank's loans are concentrated in countries believed to be in poor financial shape, the Fed noted.

The Fed's response will be sent to the Senate and House government affairs committees. ■

Deregulation Requires Changing Leadership Skills

By JAMES H. DONNELLY JR.

THIS IS THE TIME of year when many bankers return to campus to attend banking schools. The industry's young and old come together as students and teachers in environments far removed from their everyday work lives.

During a period of almost 20 years, I have been fortunate to be a faculty member at many of these schools. Class discussions, informal seminars, and debates in faculty lounges and local pubs are the usual forums for airing and sharing common concerns.

Over the past several years, I have noticed a shift in the focus of many of the discussions. The major concerns, problems, and gripes seem to focus less and less on banking and more and more on managing. As a result, I have become convinced that what is holding back many banks has little to do with banking capability and everything to do with managing capability.

In 1985 and 1986, two published industry reports focused on the factors crucial to the success of banking in the decades ahead. Each report identified quality of management as the most important single factor that will, in the future, separate high-performing from low-performing banks.

But the reports did not go on to identify the meaning of quality management. Both emphasized that management behavior in competitive industries was different from that in regulated industries. But the reports did not specify that difference.

For years, I had heard the best and the brightest in the industry struggle with the same issue: What is effective management in the banking industry? Some individuals would say, "We need more training in management, not more training in banking."

Instinctively, they apparently recognized that management had not been a key success factor in the past, but that deregulation had altered the job of managing a bank. To be sure, a bank can fail because of poor-quality loans, economic decline, or any of the usual causes. But poor quality in management must now be added to the list.

Prior to deregulation, management-selection decisions ran little risk of failure. The required knowledge and skill thought to be associated with effective bank management were spread more or less equally among individuals in the industry. Besides, demonstrated skill in banking — not management — was the primary basis for selecting bank managers.

Since 1983, along with two of my university colleagues, Jim Gibson and Steve Skinner, I have been involved in an ongoing research project that focuses on how deregulation has altered the job of managing a bank.

In 1986, after three years of talking with hundreds of bankers and banking educators from all over the nation, we decided to undertake some formalized field research. Our goal was to identify the specific behaviors associated with effective bank management — that is, what effective bank managers do. We wanted to determine the educational methods that would develop these skills.

The project, funded by the Prochnow Educational Foundation of Madison, Wis., was completed earlier this year. While many of the results have important implications for management in banking, one in particular presents a challenge for educating our next generation of industry leaders. The set of skills required of an effective bank manager has enlarged because of deregulation, and the mix of three distinct skills within the set has shifted.

Greater technical skills are required, and these skills are different than they were. In addition, two types of skills of less importance before deregulation — conceptual and human skills — are now of equal importance to technical skills.

Technical skill is the most familiar in the industry, because it has always been the most important and required of the largest number of people. It involves specialized knowledge and analytical tools within a specialty. It also involves the capability to use the tools.

Most banking education programs focus almost entirely on the development of technical skills such as asset-liability management, commercial lending, installment lending, investment and trust administration, and technical-/functional skills such as marketing, human resources management, and investment analysis.

Future bankers must be technically proficient, and educational programs will be hard-pressed to keep current their curriculums. However, our results indicate clearly that managing the bank will require conceptual and human skills.

To be sure, a bank can fail because of poor-quality loans, economic decline, or any of the usual causes. But poor quality in management must now be added to the list.

— James H. Donnelly Jr.
Turner Professor of Marketing
University of Kentucky

Conceptual skill involves the ability to see the big picture and deal with high levels of abstract reasoning and analyses.

Bankers' day-to-day activities involve dynamic environmental forces, interaction with other organizations, information, and ideas. Bankers must read what parts of the environment are of strategic importance to their bank or unit and must create a vision that specifies the relationship between that bank or unit and the environment. Then they must develop and sustain a culture that reinforces the vision.

These tasks require skill in strategic analysis, organizational design, and organizational change. Yet bank managers have typically had little direct experience with this kind of abstraction. Little in the character and composition of the industry has created a natural setting for acquiring conceptual skills.

Human skill involves a person's ability to be effective interpersonally, as well as his or her ability to be an effective team builder and team member. The increasing importance of the human element is heard in the expression: "Banking is a people business." The skill pervades the manager's relationships not only with subordinates, but also with peers, superiors, customers, and external groups. It will require skill in leadership, team building, communication, and decision-making.

Previous experience conditioned many bank officers to believe that they alone could do the work of the bank, and that employees' contributions were minimal. Our results indicate that banks in the future will require good leadership at virtually all levels of the organization.

The challenge to those organizations that have historically been involved in banker education will be to develop bankers who are also manager/leaders. Any efforts to develop individuals for managerial and leadership positions in banking must recognize the changing nature of the industry.

But, more important, these efforts must recognize the changing nature of the positions themselves. Meeting this challenge will require education and training in each of the three skills — technical, conceptual, and human. ■

Mr. Donnelly is Turner Professor of Marketing at the University of Kentucky.

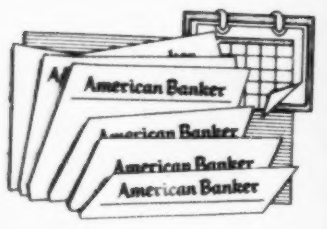
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- Former American Bankers Association president Orval Adams urged a return to the gold standard in a speech to the annual convention of the Wyoming Bankers Association. "Gold is a gift to the world from an all-wise creator," Mr. Adams said. "The gold standard is the automatic watchman on the tower of the government of free man, to guard against the poison of totalitarianism entering the bloodstream of sound money. No honest American will ever thumb his nose at Fort Knox."
- The Chicago Terminal Bank and the Industrial National Bank of Chicago announced they would merge to form the Chicago National Bank.

20 Years Ago

- The House Banking Committee approved bills to permit thrifts to refer to shares as "deposits" and dividends as "interest," and to allow them to raise capital by issuing notes, bonds, debentures, or other obligations.
- Congress enacted legislation to end the tax exemption on income from most industrial aid bonds. The proposal was supported by the Treasury Department. Treasury officials claimed that the industrial aid bonds had outlived their usefulness as a device for wooing job-creating industries to economically depressed areas. They said the bonds were chiefly used as a means of getting tax-exempt status for securities that actually were corporate bonds.

10 Years Ago

- The Federal Home Loan Bank Board proposed that acquisition by management of savings and loan association stock be limited to prevent insider windfall profits when thrifts convert from mutual to stock form.
- The House Banking Committee agreed to an amendment to prohibit revolving-door relationships between financial institutions and former regulators for two years after an agency head leaves office. The bill applied to future members of the Federal Deposit Insurance Corp., Federal Reserve Board, and Federal Home Loan Bank Board.

5 Years Ago

- Treasury Secretary Donald T. Regan granted a one-month delay in the scheduled start of tax withholding on interest and dividends after the Senate voted in favor of a Republican plan to repeal the withholding measure.
- President Reagan announced he would reappoint Paul A. Volcker chairman of the Federal Reserve Board.
- A Los Angeles consulting service criticized the quality of the average chief executive officer of the average new California thrift. The average tenure of a CEO was only about five months, according to David B. Laing and F. Douglas Nehls of Financial Charters and Acquisitions Inc., a result of executive incompetence and unrealistic expectations by thethrifts' founders. The consultants said new thrifts in California were being opened less frequently by groups of community businessmen, as was most often the case in the past, than by developers and builders, mortgage bankers, and syndicates.
- Mercantile Texas Corp., Dallas, and Southwest Bancshares Inc., Houston, said they would merge to form Mercantile Southwest Corp., the third largest banking company in Texas.
- The Federal Reserve Board voted unanimously to give BankAmerica Corp. permission to acquire Seafirst Corp.

1 Year Ago

- Comptroller of the Currency Robert L. Clarke backed Security Pacific National Bank's bid to sell mortgage-backed pass-through certificates. The comptroller's move cleared the way for a flood of asset-backed securities underwritten by national banks, and gave the securities industry a long-awaited opportunity to bring a lawsuit against the regulator.

— Domenica Trevor

First Annual Survey

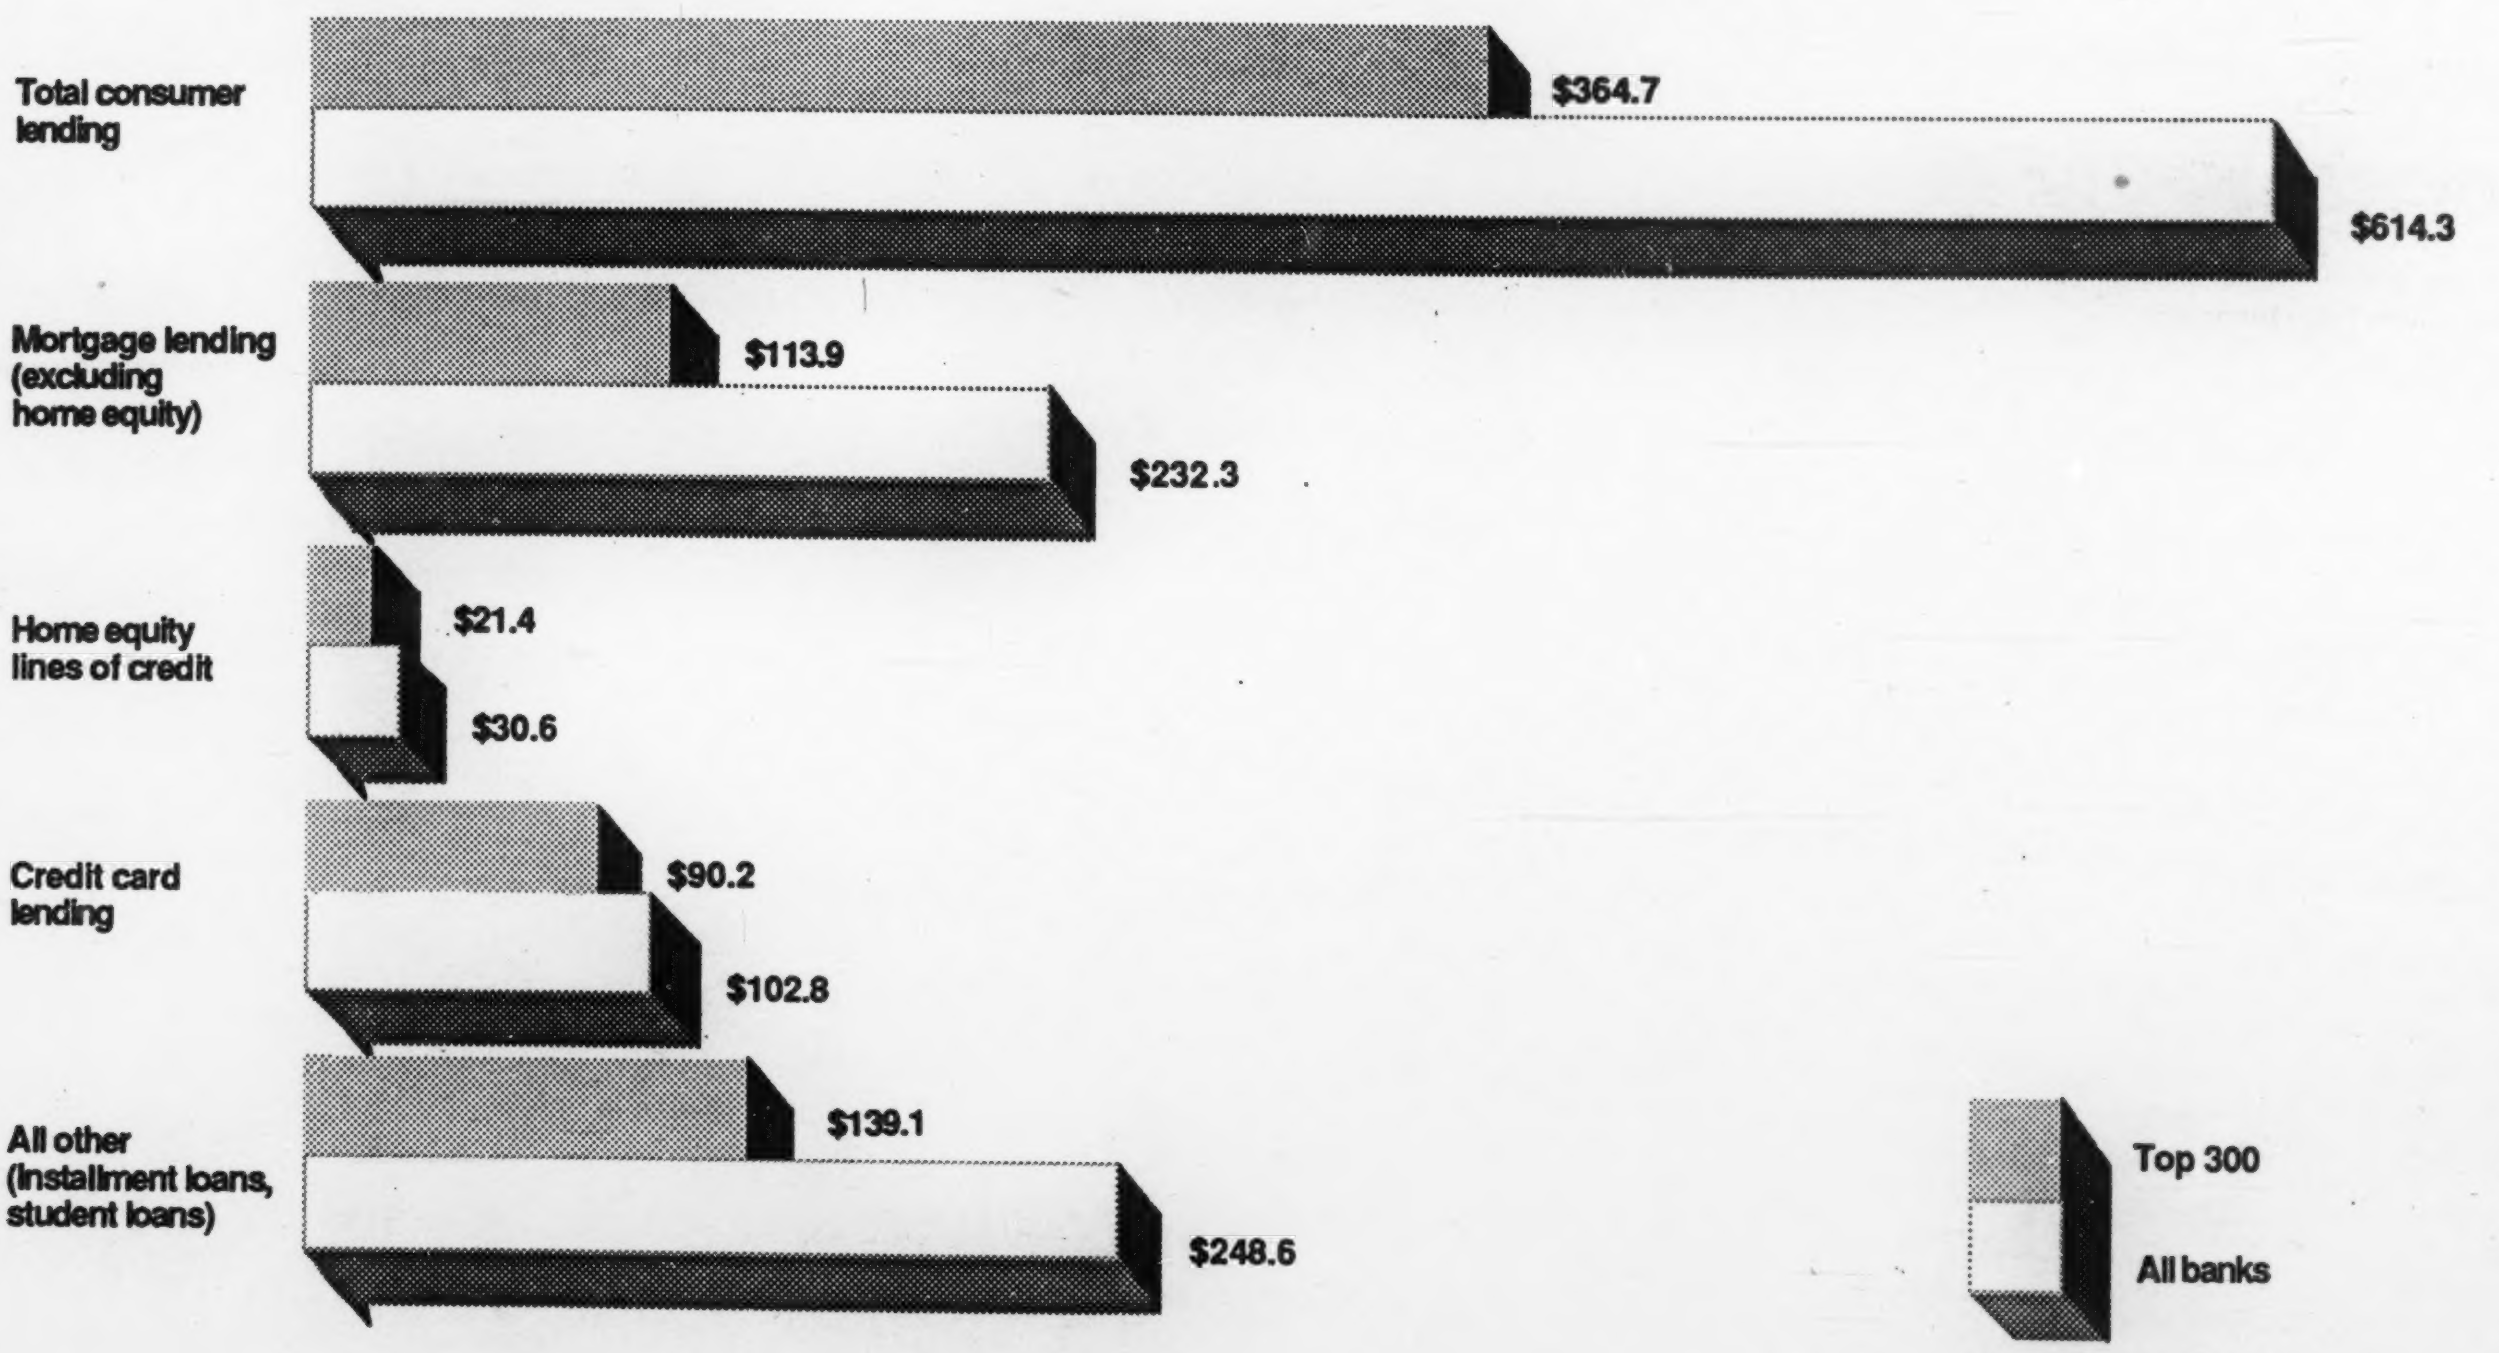
Top 300 Banks in Consumer Lending

Dec. 31, 1987 Compared with Dec. 31, 1986

American Banker ranks the top 300 banks in consumer lending on Dec. 31, 1987, based on federal regulatory reports of condition. Consumer lending is defined as lending to individuals to purchase real estate property (mortgage lending), including home equity lines of credit, lending through credit cards, and all other lending which includes installment lending (auto loans), student loans, and home improvement loans.

Consumer Lending at the Top 300 Banks Compared with All Banks

In billions of dollars as of Dec. 31, 1987



Source: American Banker 1988

Data Source: Data were provided by **ADP Data Services Division, New York,** from its data base of the Federal Regulatory report of condition (RC). ADP adjusts the 1986 data for mergers occurring in 1987. **Total Consumer Loans** are mortgage loans plus credit card loans plus all other consumer loans. **Mortgage loans** are loans secured by 1-4 family residential properties, including home equity loans. (Schedule RC-C, Column B-Domestic Offices, items 1.c.(1) + 1.c.(2).) **Home equity loans** are revolving, open-end loans secured by 1-4 family residential properties and extended under lines of credit. (Schedule RC-C, Column B, item 1.c.(1).) **Credit card loans** include all extentions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans. (Schedule RC-C, Column A-Consolidated Bank, item 6a.) **All other consumer loans** are loans to individuals for household, family, and other personal expenditures and include single payment, instalment, and student loans. (Schedule RC-C, Column A, item 6b.) **Consumer loans % of total loans** is the ratio of total consumer loans to total loans. **Total loans** are Loans and leases, net of unearned income. (RC-Balance Sheet, item 4.a.) **(1)—** Please note that home equity loans— which were reported by banks for the first time on the Report of Condition for Dec. 31, 1987— are included in the "Mortgage Loans" column. **(‡)—** In billions of dollars. **(†)—** Aggregate data are from the Federal Deposit Insurance Corp., Washington, D.C.

Data Source: Data were provided by **ADP Data Services Division, New York,** from its data base of the Federal Regulatory report of condition (RC). ADP adjusts the 1986 data for mergers occurring in 1987. **Total Consumer Loans** are mortgage loans plus credit card loans plus all other consumer loans. **Mortgage loans** are loans secured by 1-4 family residential properties, including home equity loans. (Schedule RC-C, Column B-Domestic Offices, items 1.c.(1) + 1.c.(2).) **Home equity loans** are revolving, open-end loans secured by 1-4 family residential properties and extended under lines of credit. (Schedule RC-C, Column B, item 1.c.(1).) **Credit card loans** include all extentions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans. (Schedule RC-C, Column A-Consolidated Bank, item 6a.) **All other consumer loans** are loans to individuals for household, family, and other personal expenditures and include single payment, instalment, and student loans. (Schedule RC-C, Column A, item 6b.) **Consumer loans % of total loans** is the ratio of total consumer loans to total loans. **Total loans** are Loans and leases, net of unearned income. (RC-Balance Sheet, item 4.a.) **(¹)**— Please note that home equity loans— which were reported by banks for the first time on the Report of Condition for Dec. 31, 1987— are included in the "Mortgage Loans" column. **(‡)**— In billions of dollars. **(†)**— Aggregate data are from the Federal Deposit Insurance Corp., Washington, D.C.

Data Source: Data were provided by **ADP Data Services Division, New York,** from its data base of the Federal Regulatory report of condition (RC). ADP adjusts the 1986 data for mergers occurring in 1987. **Total Consumer Loans** are mortgage loans plus credit card loans plus all other consumer loans. **Mortgage loans** are loans secured by 1-4 family residential properties, including home equity loans. (Schedule RC-C, Column B-Domestic Offices, items 1.c.(1) + 1.c.(2).) **Home equity loans** are revolving, open-end loans secured by 1-4 family residential properties and extended under lines of credit. (Schedule RC-C, Column B, item 1.c.(1).) **Credit card loans** include all extentions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans. (Schedule RC-C, Column A-Consolidated Bank, item 6a.) **All other consumer loans** are loans to individuals for household, family, and other personal expenditures and include single payment, installment, and student loans. (Schedule RC-C, Column A, item 6b.) **Consumer loans % of total loans** is the ratio of total consumer loans to total loans. **Total loans** are Loans and leases, net of unearned income. (RC-Balance Sheet, item 4.a.) **(1)—** Please note that home equity loans— which were reported by banks for the first time on the Report of Condition for Dec. 31, 1987— are included in the "Mortgage Loans" column. **(‡)—** In billions of dollars. **(†)—** Aggregate data are from the Federal Deposit Insurance Corp., Washington, D.C. **(a)—** On 2/1/88, Peoples National Bank and Old National Bank merged under Peoples' charter and with a new title, U.S. Bank of Washington NA.

Scale Tips Toward Consumer Lending

➸ Continued from Page 1

switch to consumer lending is the result of a continuing trend over a period of years. They point to the loss of the Fortune 500 market from bank lending.

John Lyons, managing partner with Lyons Zomback & Ostrowski, said the move away from commercial lending as developed over the past 10 to 12 years.

"Larger corporations have been drifting away from bank borrowing," and relying more on other and cheaper forms of borrowing, such as commercial paper, said Mr. Lyons. "Big banks have been losing their bread-and-butter business . . . the Fortune 500 borrowers. They're not borrowing from banks but from each other," through the commercial paper markets. "The big banks are losing their business to the securities markets."

Thomas A. Durkin, chief economist for American Financial Services Association, a consumer finance industry trade group, agreed. But he noted that "some of the banks' credit activities do not show up on the balance sheet. Items such as bankers acceptances, credit facilities, commercial paper are all off-balance-sheet items."

"With the Supreme Court decision allowing banks to enter the security markets," Mr. Durkin said, "there may be a reverse in the [negative] trend of the big banks dealing with corporate clients."

Mr. Durkin also pointed out the possibility that heavy merger activity "may have brought more retail-oriented banks into [the ranks] of the top 300 commercial banks." Further, banks have been active in mortgage and real estate lending, a component of consumer lending that has jumped 57.1% since 1983, or 9.5% on an annualized basis. "Banks have been finding home equity loans and second mortgages to be very profitable products."

Citibank Is the Top Consumer Bank

Citibank — the nation's top bank in deposits, assets, and commercial loans —is No. 1 in consumer loans as well. The giant money center bank reported $22.9 billion in total consumer loans at yearend 1987, an increase of 27.5% from the year before.

Consumer loans accounted for 24.1% of Citibank's total loans last year, a significant increase from the previous year's ratio of 20%. Conversely, Citibank's commercial loans dropped 10.6% in 1987 to $35.6 billion. This accounted for 33.5% of total loans, down from 39.7% in 1986.

The banking subsidiaries of Citicorp — Citibank's parent and the nation's top bank holding company — dominated the rankings. Among the top 25 banks in consumer loans, four were Citicorp subsidiaries.

Commercial Bank Loans to the Consumer

Yearend 1983 to yearend 1987 ($ Billions)

	1983	1984	1985	1986	1987	Annual Growth
Mortgage loans[1]	$167.3	$181.6	$198.7	$222.5	$262.9	9.46%
Credit card loans	17.2	61.2	78.1	91.9	102.8	42.99
All other[2]	207.4	205.6	230.5	243.8	248.6	3.69
Total consumer loans:	**391.9**	**448.4**	**507.3**	**558.2**	**614.3**	**9.41**

(1)— Mortgage loans are 1-4 family real estate loans, including home equity loans. (2)— Includes loans to individuals for household, family, and other personal expenditures and include single payment, installment, and student loans. Annual growth: This is the compounded annual growth rate over the five-year period Dec. 31, 1983 to Dec. 31, 1987.

Source: Data are from the Federal Deposit Insurance Corp. and are for all FDIC-insured banks.

In addition to top-ranked Citibank, Citibank (South Dakota) NA, Sioux Falls, ranked third with $11.6 billion in consumer loans; Citibank Nevada NA, Las Vegas, was 15th with $3.2 billion; and Citibank New York State, Perinton, was 23d with $2.7 billion. Combined, these four banks had $40.4 billion in consumer loans, or 6.6% of consumer loans held by all banks.

Wells Fargo was the top bank in home equity loans, with $1.5 billion. These loans accounted for 20.9% of Wells' mortgage loans. As mentioned earlier, this is the first time these loans are being reported as a separate item on the call report, and there are no comparable year-ago figures.

Wells is followed by Citibank NA with $1.2 billion, or 14% of its mortgage loans; Irving Trust Co., New York, $936.3 million, or 99.9%; Bank of America NT&SA, San Francisco, $487.7 million, or 4.82%; and Connecticut Bank and Trust Co. NA, Hartford, $472.2 million, or 43.4%.

The top 200 banks in home equity loans had $21.9 billion in these loans on Dec. 31, or 72% of the $30.6 billion held by all commercial banks at yearend 1987. Home equity loans accounted for 19.6% of all mortgage loans for the top 200 banks, while these loans accounted for 11.7% of the mortgage loan portfolio of the entire commercial bank industry.

Other Survey Findings

- Credit card loans at all banks have been the fastest-growing component of consumer lending since 1983. While the subject will be dealt with more fully in the Sept. 26 edition, the breakdown in today's survey reveals that the compounded annual rate of growth of credit card loans over the past five years was 43%, compared with 9.5% for mortgage loans and 3.7% for all other consumer loans.

Credit card loans have grown sixfold since 1983, from $17.2 billion on Dec. 31, 1983, to $102.8 billion at yearend 1987. Last year, credit card loans accounted for 16.7% of consumer loans at all banks, up from 4.4% in 1983.

- Total consumer loans of the top 300 commercial banks accounted for 59.5% of consumer loans at all banks. The top 300 also held 49% of mortgage loans (excluding home equity loans); 69.9% of home equity loans; 88.5% of credit card loans; and 56% of all other consumer loans.

- The bank with the largest gain in consumer loans was American Express Centurion Bank, Newark, Del. The limited-purpose subsidiary of American Express Co. ranked 47th, with $1.7 billion in total consumer loans, an increase of 640.9% from the previous year. Virtually all of the bank's loans were in the form of credit card loans (99.8%), with the remainder as home equity loans.

Another top gainer was Barnett Bank of Pinellas County, St. Petersburg, Fla. Reporting $938.9 million, it was No. 102, an increase of 254.6%, from 1986; 78.1% of the loans were mortgage loans.

Chase Bank of Arizona was No. 261, booking $356.6 million in consumer loans — a rise of 220%; 80.2% were mortgage loans. Greenwood Trust Co., Newcastle, Del., ranked 16th, with $3.1 billion, 99.6% in credit card loans.

- Pennsylvania had the highest number of banks in today's listings, with 24. Following Pennsylvania were New York and Ohio, with 23 each, New Jersey with 22, Delaware with 21, and Florida with 19.

The listing of the top 300 banks in consumer loans appears on pages 14-20 of today's edition. These tables show the consumer loans for 1987 and 1986 for each bank; a breakdown of the consumer loan components, including home equity loans; a geographical breakdown of the top 300 banks in consumer lending; and the top 200 commercial banks in home equity loans.

Federal regulators define home equity loans as revolving, open-end loans secured by one-family to four-family residential properties, extended under lines of credit. ■

Bank of New York Accuses Irving Of Stalling on Bid

➸ Continued from Page 3

Some banking industry analysts believed that Irving's board did not respond immediately to the offer because it was anticipating an increased offer from the Italian bank. So far, however, BCI has not raised its bid for 51% of Irving, which is valued by analysts at $73 to $74 per Irving share.

After its meeting, Irving's board said it was "pleased that Bank of New York had made the revised offer," but various aspects of the bid, it said, "require further clarification."

If further negotiations are not possible, Mr. Bacot said, Bank of New York will seek an expedited ruling on its challenge to a portion of Irving's poison pill shareholder rights plan. If successful, it will buy as much as possible of Irving at the old price through a tender offer and operate it as a separate subsidiary.

The conditions set by Irving for further talks are (1) a favorable ruling by the Fed on the special dividend, (2) a special session of Bank of New York shareholders to obtain two-thirds approval for the stock portion of the deal, (3) an end to Bank of New York's court challenges, and (4) a promise not to oppose BCI's application to the Fed for permission to acquire control of Irving.

"As the Irving board must appreciate, your position is unacceptable," Mr. Bacot told Mr. Luke in his letter. "We had come to the meeting hoping to reach an amicable resolution, but your position leaves us no room for negotiation."

Mr. Bacot noted in an interview on Wednesday that Irving had not offered to drop takeover defenses — principally the poison pill — or waive antitakeover provisions of New York State law even if Bank of New York accepted the Irving conditions.

"So we said, 'How long could this take?' " Mr. Bacot related. "They said two months, three months, up to six months. You'll just have to rely on us as long as this auction goes on.

"Obviously, time is of no consideration to them," the Bank of New York chairman said. "But it is to us, since I doubt that under any circumstances the Fed is going to let this all casually go on and on. They just won't do it.

"In the Fed's ruling [last month, granting a 45-day extension] they made it clear that this is not to be dragged out," Mr. Bacot said. "But it's clear to us that Irving's strategy is to drag it out as long as they can."

He said that Martin Lipton, a New York lawyer representing Irving, had characterized the request during the meeting by suggesting that Bank of New York "put itself totally in the hands of the Irving directors."

"How do you negotiate under those circumstances?" Mr. Bacot asked. "They say trust us, but knowing how they acted for eight and a half months, it is hard to see — if they had the ability to dismiss us — why they wouldn't do just that." ■

Sale of Stock May Benefit American S&L

➸ Continued from Page 1

than any other single thrift, with 301,594 shares valued at approximately $85 per share. The Federal Home Loan Bank Board is trying to sell the $32 billion thrift to an investment group headed by Robert Bass, a Texas billionaire. Negotiations are scheduled to end one way or the other the first week of July.

Three Citicorp thrift subsidiaries — Citicorp Savings of Florida, Citicorp Savings of California, and Citicorp Savings of Washington, D.C. — owned a total of 428,828 shares as of this month.

Observers say congressional action would also help Freddie Mac by making it more difficult for politicians to draw on its resources, if more money is required to bail out the Federal Savings and Loan Insurance Corp.

Freddie Mac recently limited the number of shares its market makers could hold at any one time, when the price began a 24-point climb in reaction to Mr. D'Amato's June 6 bill. On June 13, speculation boosted the price from $77 per share to $92; it fell back to $82 by the close.

Administration officials reportedly have discussed the liquidation of Freddie Mac, a congressionally chartered mortgage corporation owned by the thrift industry, to provide the FSLIC with the billions it may require to close some 400 insolvent thrifts. Though denied by officials, many analysts see the D'Amato bill as an attempt to make the concept too costly and difficult to implement.

Under existing laws, only S&Ls and market makers may own Freddie Mac preferred stock, which is listed on the New York Stock Exchange. Freddie Mac common may be owned only by the 12 Federal Home Loan banks.

Freddie Mac's top 20 stockholders as of June were American S&L, Calif., 301,594 shares; Great American First Savings, Calif., 240,377; Great Western Savings, Calif., 226,707.

Main Line Federal Savings, Pa., 150,000 shares; American Savings, Calif. (not American Savings and Loan of Stockton), 150,000; Citicorp Savings of Florida, 150,000; Citicorp Savings of California, 150,000.

World Savings and Loan, Calif., 150,000 shares; Imperial Savings and Loan Association, Calif., 150,000; Mutual Savings and Loan Association, Calif., 150,000; Great American First Savings, Calif., 150,000.

First Federal of Michigan, 145,000 shares; California Federal Savings, 144,092; First Federal Savings and Loan, Ariz., 119,496; Citicorp Savings of Washington, D.C. (formerly National Permanent Bank) 128,828.

The First Federal Savings Bank, Ohio, 123,609 shares; Georgia Federal Savings and Loan, 120,541; Great Lakes Federal Savings, Mich., 116,162; Commercial Federal Savings, Neb., 113,599; Security Savings and Loan, Wis., 112,633. ■

Dallas Home Loan Bank May Get Qualified Opinion

Continued from Page 1

surance Corp. to make good on the loans in the event of default has prompted accounting firm Deloitte, Haskins & Sells to delay issuing an opinion on the Dallas Home Loan Bank's 1987 results, pending release of the annual audit of the FSLIC by the General Accounting Office.

Officials at the Dallas bank do not rule out a qualified opinion but say it would not hurt bank operations. "We have been candid with those interested in the financial strength of the Dallas bank," said George Barclay, the bank's president. If Deloitte does issue a qualified opinion, he said, "it won't have that much of an impact."

On the other hand, some industry experts warn that an accounting disclaimer might affect the consolidated borrowing ability of the 12 district banks as investors demand higher interest rates on Federal Home Loan bank obligations.

And they say the affair should serve as a warning to anyone in Congress who thinks the FSLIC crisis can be reversed without further legislation.

A qualified opinion by an auditor signals limitations to the audit or exceptions the auditor takes to the statements. Giving a member institution of a federal agency a qualified accounting opinion "would be like saying that the emperor has no clothes," said John Kris, an associate director at Moody's Investors Service. "It should prompt action in Congress to solve FSLIC's problem."

In the meantime, the accounting crisis poses a dilemma for Deloitte. The firm cannot back down from a similar tough stance it took last year. But it has not found comfort in the General Accounting Office's preliminary report, which states that the FSLIC's insolvency deepened to $13.7 billion from $6.3 billion in 1987 despite the Competitive Equality Banking Act, which granted the Bank Board $10.8 billion in extra borrowing authority over three years.

"I'm sure that Deloitte is wrestling with the issue," said Tom Bloom, a former chief accountant at the Bank Board's office of regulatory policy, oversight, and supervision.

Bruised Expectations

Behind the scenes, sources say, there are some bruised expectations on both sides of the issue.

A year ago, Deloitte put its foot down when the Federal Home Loan Bank of Dallas was carrying $1 billion of uncollateralized loans on its books and the FSLIC was perilously close to insolvency. To deal with the crisis, the FSLIC wired $1 billion in cash to the Dallas bank, thereby erasing the bank's exposure and prompting Deloitte to issue a clean opinion on the bank's 1986 financial statements.

Last December, however, the Federal Home Loan Bank of Dallas turned around and bought back $500 million of the questioned obligations from the FSLIC. That put Deloitte back at square one in efforts to certify the financial soundness of the bank in 1987.

And the firm looked a little foolish for assuming that the Dallas bank wouldn't work itself into the same jam as last year. "It was relatively dumb for the accounting firm to think the Dallas FHLB wouldn't do that," said one Big Eight accountant who specializes in thrift audits.

On the other side of the fence, Bank Board officials are dismayed that Deloitte has not taken more comfort from the passage of the Competitive Equality Banking Act.

"The feeling at the Bank Board was that once we got the extra $10.8 billion, [the unsecured advances] wouldn't be a problem," said one Bank Board source. "We were a little surprised when Deloitte balked."

Now that it has, however, the ball is in Deloitte's court. A replay of last year's cash infusion from the the FSLIC is out, given the Dallas bank's demonstrated propensity to reverse course.

"I doubt that a repeat of last year will be acceptable to Deloitte," said Edward Montgomery, chairman of the thrift accounting section at Arthur Young & Co. The Bank Board's belief is that complete results from the GAO audit of the FSLIC will encourage Deloitte to give the Dallas bank a clean report card.

Frederick Wolf, director of the GAO's accounting and financial management division, "made optimistic noises that the FSLIC is not in danger of imminent collapse" in testimony before the House Banking Committee, said Noel Fahey, senior vice president of the U.S. League of Savings Institutions.

"Wolf hoped that would assuage the fears of Deloitte," Mr. Fahey said.

If that proves not to be the case, the Dallas Home Loan Bank could obtain some form of additional guarantees on the uncollateralized obligations, such as a letter of credit, Mr. Montgomery said.

As Deloitte deliberates, the Federal Home Loan Bank of Dallas is on the street with a 1987 report that is devoid of an auditor's certification. "Obviously, it's a matter of concern" Mr. Fahey said. ■

MasterCard Plans Charity Campaign

Continued from Back Page

1986 could be attributed to "Choose." All credit card activity was up. The competing bank card group, Visa International, enjoyed a 27% boom of its own, possibly fueled by equally memorable cause-related advertising tied to the 1988 Olympic Games.

Come Oct. 1, when the 1988 "Choose" program goes into full swing, the Summer Olympics will be over and Visa's advertising will enter a new phase. It may give "Choose" an opening it lacked last year, though it remains to be seen what Visa strategists have up their sleeves for the fourth quarter.

"If [Visa's campaign] runs its course by the fall, it would be terrific for MasterCard, but, in any event, our consumer research shows that charities have a wider and more motivating appeal than the Olympics," Mr. Dimsey said.

American Express Co., which reported an 18% increase in card and travelers check sales last year, introduced the cause-related marketing concept in the early 1980s but has since changed its advertising focus.

After donating several million dollars to numerous causes, including the Statue of Liberty renovation, American Express is now stressing consumer protection plans to encourage card usage in retail stores. ■

Brazil Debt Plan Faces Resistance

Continued from Page 2

to the Third World nations, many of which have adopted austerity measures in order to attract financing.

"If you collect the money and immediately use it to pay down principal, it's very negative psychologically," he said. "It shows the banks are just cutting and running."

Mr. McDermott said removal of Brazilian loans from nonaccrual status will dramatically improve large banks' ratios of nonperforming loans to total loans. For the 10 banks with the biggest exposures to Brazil, the ratio would drop to 2.9% from 5.3%; at Citicorp, the ratio would fall to 1.9% from 4.5% and at J.P. Morgan & Co. to 1.1% from 4.9%, Mr. McDermott said.

The additional interest income would boost the top 10 banks' earnings per share this year by an average 30%. BankAmerica would feel the biggest benefit, with its estimated earnings per share nearly doubling. Earnings per share at Chase Manhattan Corp. would be boosted by 43%, while Manufacturers Hanover Corp.'s profits would be increased by 38%, according to the Keefe Bruyette analyst. ■

Shareholders Approve Nashua Federal Merger

NASHUA, N.H. — Shareholders of First Federal Bank of Nashua have approved the bank's merger with New Hamphire Savings Bank Corp., Concord.

State and federal regulatory approvals have been granted, including the transfer of First Federal Bank's deposit coverage from the Federal Savings and Loan Insurance Corp. to the Federal Deposit Insurance Corp. ■

FDIC Forecasts 2 Texas Bailouts, To Surprise of Bank Executives

By BARBARA A. REHM
Washington Bureau

WASHINGTON — The Federal Deposit Insurance Corp. plans to bail out Texas American Bancshares Inc., Fort Worth, and National Bancshares Corporation of Texas, San Antonio, by yearend, according to a press statement and the text of a speech scheduled to be delivered today by FDIC Chairman L. William Seidman.

The FDIC's decision to announce the planned rescues of major Texas banks is highly unusual. Normally, the agency does not admit it has agreed to a rescue until the deal is sealed.

In April, Texas American and National Bancshares said they were considering a plan to merge. The combined bank would get some cash from the FDIC and private investors to start fresh, the banks explained.

Texas American and National Bancshares were caught off guard by the news of the FDIC statements on Thursday.

"We haven't heard them tell us that," said Texas American spokeswoman Gail Cooksey. "Apparently, you're telling us something we don't know."

Richard W. Calvert, chairman of National Bancshares' board, said in a phone interview yesterday, "It's news to me. I hadn't heard that." National

California First, Activists Reach Loan Pact

By MICHAEL A. ROBINSON
West Coast Bureau

SAN FRANCISCO — In one of the largest accords of its kind, California First Bank reached an agreement with dozens of minority and community groups to provide at least $84 million in loans to low-income areas of California through 1990.

Representatives of a broad array of activist groups said Thursday that the agreement with California First was the first of its kind involving a U.S. financial institution controlled by a foreign bank. The Bank of Tokyo Ltd. owns 77% of California First, the Meiji Mutual Life Insurance Co., Tokyo, owns 6%, and the remainder is publicly held.

The agreement under the federal Community Reinvestment Act came after several weeks of negotiations between the bank and three coalitions representing about 90 community groups in California: Minorities Investing for the Future, the California Reinvestment Committee, and the Associa-

First Data Adds To Its Share Of Card Market

American Express Affiliate Buying Bank-Owned Group

By JEFFREY KUTLER

NEW YORK — First Data Resources Inc., a subsidiary of American Express Co., has announced another in a series of acquisitions that will increase its already dominant share of the bank card processing market.

First Data said it has reached an agreement in principle to acquire Eastern States, the largest of the bank-owned associations that process MasterCard and Visa accounts for their members. The purchase terms were not disclosed. A definitive agreement still must be drafted and presented to the companies' boards.

Pending approval of the deal, Eastern States would add almost 8 million accounts to the 25 million currently being serviced by First Data at its headquarters in Omaha and three regional computer centers.

That would boost First Data's share of the approximately 150 million domestic MasterCard and Visa accounts to about 21% from 16%. It is an irony not lost on bankers who have criticized American Express Co. for competing against banks while also getting rich off them.

First Data has been affiliated with American Express since 1980. It was founded in 1971 by P.E. Esping, an Omaha-based entrepreneur.

Citibank, Bank of America, and several other leading credit card banks have back-office operations comparable in size to First Data Resources'. But the American Express affiliate is well

An American View of Europe's Consolidation in 1992

By DENNIS WEATHERSTONE

With the European Community in the process of dismantling intra-European trade barriers by Dec. 31, 1992, international business leaders are gauging the impact of a true Common Market. The following remarks on the issue were made by Dennis Weatherstone, president of J.P. Morgan & Co., before the Swiss-American Chamber of Commerce in Zurich on June 20.

□

NOWHERE WILL the changes promised by the 1992 integration be more profound, or have more far-reaching effects, than in financial services. More competition will force greater efficiency, leading to lower costs and wider choices for consumers. And financial liberalization will benefit all sectors of the economy that rely on the capital markets.

If savings can be better mobilized and credit can be better allocated throughout Europe, business opportunities opened up by the move to a single market can be realized more quickly and easily. Investment will rise and, down the road, we may start to see the high rates of unemployment in the Community decline. Although Switzerland and the United States, neither a member of the European Community, technically will be observers of these changes, they will significantly affect those two countries, and others beyond European Community borders.

We in the U.S. would do well to benefit from the example of deliberate reform that Europe is poised to provide over the next four years.

— Dennis Weatherstone
President
J.P. Morgan & Co.

So today I will focus my remarks on financial services. I readily admit that I find finance a source of endless fascination, and I suspect that it is of more than passing interest to an audience in Zurich, perhaps the Continent's foremost financial center.

A unified market for financial services, embracing 320 million people, glimmers on the 1992 horizon. To create this market, the European Community must eliminate remaining capital controls, harmonize taxes and regulations that discriminate against other member states, and establish a regulatory framework that will permit financial firms to expand and sell a full menu of wholesale and retail services freely across borders — that will permit them to become, in effect, European universal banks.

Under the guiding principle of mutual recognition of supervisory authority, banks will be supervised principally by their home market regulator, rather than by a central regulatory authority or by the regulators of their host countries. To even out the playing field, the European Community plans to establish minimal prudential regulations for banks, including harmonized capital standards and accounting policies.

That will do for facts . . . How do all these proposed changes appear to an American? What might they mean? And more specifically, what might they mean for various market participants, nations, and other interested parties?

Admirable Agreement on Basic Issues

First of all, the general sense of agreement among the countries of the European Community on fundamental financial market issues is impressive. As a veteran of the continuing Glass-Steagall wars in the U.S., I express my admiration with some feeling for the effort to transcend local interests and traditions in order to achieve a greater good — in this case, the eventual creation of a more efficient European market for financial services.

We have had less success across the Atlantic in forging consensus on a similar goal, in many ways more modest: namely, allowing financial firms to engage in both banking and securities activities nationwide, in the interest of creating a more efficient financial services market in the U.S. And we have just one country to deal with, not 12!

It is entirely proper, of course, to be skeptical that the European Community's member states will follow through on all of the planned reforms. The U.K. for one is reluctant to surrender supervision of London's foreign banking community to home country regulators.

Moreover, under current proposals, host countries would retain supervisory authority over bank liquidity and other factors deemed necessary for monetary control, and over foreign banks' securities activities. As a result, host country regulators have some leeway to work against the thrust of European Communitywide regulation if they choose to do so. Still, we are betting that the momentum toward unification will continue to build.

We in the U.S. would do well to benefit from the example of deliberate reform that Europe is poised to provide over the next four years. But, happily for those of us who think change in our own market is long overdue, the integration of European financial markets may also directly increase the pressure for reform in the U.S. — and other nonmember states — through demands for reciprocity.

The European Commission has reserved the right to deny applications from third-country banks to obtain an European Community banking license or to acquire an ownership interest in a Community bank, if the Commission believes that banks of any member state are not receiving reciprocal treatment. Significantly, the reciprocity language in the guidelines is vague, giving the Commission wide scope for enforcement.

Insistence on Reciprocity

All the signals suggest that the European Commission will not be shy about seeking reciprocity. Earlier this month the Commission asked member states to begin applying the proposed reciprocity provisions even though they have not yet been formally adopted by the Community. The U.S. and Japan will probably feel the pinch of reciprocity demands the most, since they permit far fewer securities, insurance, and investment activities for banks within their borders than do most European countries. Australia, Canada, and even Switzerland also may be affected because of continued restrictions on the entry of foreign banks to their markets.

Any deregulation that results from demands for reciprocity may strengthen the ability of New York and Tokyo to compete with the European Community's financial centers.

Perhaps ironically, any deregulation that results from demands for reciprocity may strengthen the ability of New York and Tokyo to compete with the European Community's financial centers, and particularly with London. The potential return of some dollar business to New York and yen business to Tokyo at the expense of London should parallel the repatriation of home-currency business to European financial centers. Banks and securities firms in these centers have a natural advantage over their London-based brethren in being closer to home-currency issuers, borrowers, and investors.

This trend toward decentralization, if it develops, would contradict the view that the wholesale market for financial services, in contrast to the retail market, will not be much affected by 1992. The theory is that financial services used by corporations, such as trade finance, commercial lending, and securities underwriting, are already subject to intense foreign competition in most countries. Over the past 20 years, however, cross-border financial flows have been heavily influenced by taxes and regulation.

Borrowers and investors, as you know, flocked to London in the 1970s and early 1980s mainly because London was free from the withholding taxes, reserve requirements, interest rate ceilings, and product restrictions that hampered the growth of business on the Continent, and in New York and Tokyo. And today, France, Italy, the Netherlands, and Spain are beginning to reap the benefits of having taken steps to liberalize their capital markets over the past few years: business that had migrated abroad is flowing back.

I doubt that the growth of domestic markets will sound the death knell for the London-based Euromarkets, however. London is likely to remain a major international financial center, provided that changes adopted in London in light of regulatory and tax harmonization in the European Community do not impose onerous costs on financial dealings with investors from outside the Community.

Too Soon for a Single Currency

Looking ahead, any movement towards a single European central bank and a single European currency may again cause international finance to gravitate towards a single financial center, located most likely close to the central bank. But, realistically, a full-fledged European central bank belongs to the realm of the future.

A European currency replacing national currencies would indeed be the crowning achievement of European integration, but it would require the member countries to give up control over monetary policy, and reduce their control over fiscal policy within national borders. They have shown no inclination to surrender power to that extent. For my money, there seems little point in pursuing this remote goal now; instead, the step-by-step improvement of economic policy coordination and patient dismantling of barriers between national economies is challenge enough.

What about the currency markets, assuming we continue to have marks and francs with us for the foreseeable future? The European Community members' commitment last week in Luxembourg to remove most remaining capital controls within two years is sure to create more pressures within the European Monetary System. This in turn will require more frequent realignments — or broader control bands — unless policymakers realize their stated objective to improve macroeconomic coordination.

More volatility and frequent realignments might well argue for an increase in the use of the European currency unit within the community, a trend that Europewide business activity may also encourage. Invoicing in ECUs, for instance, is becoming more appealing; and the market for financial products denominated in ECUs may expand as restrictions on holding ECUs are removed.

I'd like to turn now to the prospect of business restructuring in European fi-

1st Tennessee Calls Off Deal with Large Thrift

By ANDREA BENNETT
Washington Bureau

CHICAGO — First Tennessee National Corp. called off the acquisition of a large Tennessee savings and loan when it learned the thrift plans a substantial boost to its loan-loss reserve.

First Tennessee, based in Memphis, is the state's second largest bank holding company, with assets of about $5.9 billion. The company terminated the proposed acquisition of Metropolitan Federal Savings and Loan Association, Nashville, following completion of its due-diligence review. Metropolitan, with about $1 billion in assets, is Tennessee's second largest savings and loan.

The nonbinding deal, announced in April, was valued at about $127.9 million. It was called off after First Tennessee asked to reopen negotiations, Metropolitan said, when the thrift disclosed the addition to reserves in its fiscal fourth quarter, ending June 30. Metropolitan Federal said its board unanimously rejected the request to renegotiate.

In announcing the termination, Metropolitan Federal also said that the increased regulatory problems of merging a healthy thrift with a commercial banking company were prolonging the time for completing a possible merger.

"I don't agree with that assessment," said Lee Welch, First Tennessee's executive vice president and general counsel. "I think it [the merger] was doable. The regulatory environment had nothing to do with it."

Metropolitan Federal announced this week it expects to report a loss for the fourth quarter because of the $21 million addition to its loan-loss reserve, raising reserves from 0.89% of loans as of March 31 to about 1.95% of total loans.

The thrift did not specify the expected fourth-quarter loss. However, Merilyn Herbert, senior vice president, said Metropolitan Federal will probably report a loss for the fiscal year of $6 million to $7 million. Metropolitan Federal earned $7.7 million for the first nine months of the fiscal year.

The boost in the reserves primarily reflects problems with loans for investor-owned commercial real estate projects that have been affected by the Tax Reform Act of 1986, she said.

Ms. Herbert described the boost in loan-loss reserves as a "one-time thing." She pointed out the thrift will have an equity-to-assets ratio of 7.3% following the addition, more than double the level required for thrifts.

"We're a very strong institution. We expect to have good earnings for the next fiscal year," she said. ■

Hanover in $475 Million Offering Backed by Credit Cards

By EVELYN WALLACE
The Bond Buyer

NEW YORK — Manufacturers Hanover Corp. joined the fast-moving asset-backed securities market this week with an offering of certificates backed by credit cards.

The $475 million offering of Manufacturers Hanover Amortizing Revolving Card Certificates makes Manufacturers the third money center bank to publicly securitize its card receivables. BankAmerica Corp. and First Chicago Corp. have also securitized the receivables.

The issue was comanaged by Manufacturers Hanover Trust Co. and lead-managed by Salomon Brothers Inc.

Volume in the asset-backed market this year has totaled just over $6 billion so far this year, according *Asset Sales Report*, an *American Banker* newsletter. That is more than double the $2.7 billion tallied for the same period in 1987.

The five-year Manufacturers Hanover issue has an expected average life of 2.35 years and carries a coupon of 8.85%. It was offered at 99.79 to yield 8.95%, 70 basis points above comparable Treasuries.

The issue is expected to be part of a program of future securitizations, but no specific agenda has been set, said Mark Scanlon, vice president of corporate finance at Manufacturers. The bank has a $2.6 billion portfolio of credit card receivables.

Both Moody's Investors Service and Standard & Poor's Corp. rated the issue triple-A, largely on the basis of a 13% letter of credit from Union Bank of Switzerland. ■

2d Mortgages Grew in 1987 At Top Thrifts

By PHIL ROOSEVELT

NEW YORK — The top 300 thrifts in second mortgages increased their holdings of these loans by 7.1% last year. But second mortgages made up a slightly smaller percentage of the group's total mortgage credit outstanding than in 1986, according to an *American Banker* survey.

City Federal Savings Bank, Bedminster, N.J., retained the top spot, with $757.8 million in second mortgages at the end of 1987. Citicorp Savings of Florida, Miami, and Sears Savings Bank, Glendale, Calif., retained the No. 2 and No. 3 posts, respectively.

John Atherton, president and deputy chief executive of City Federal, attributed the thrift's lead to a four-year-old push in home equity lines of credit, the dominant form of second mortgages. "We got in early and had an opportunity to build market share," he said.

City Federal, which concentrates on the New Jersey and Florida markets, had a 1.82% drop in aggregate second mortgage holdings in 1987. But home equity lines outstanding grew by 35%, and the thrift continues to originate about $25 million a month in those loans, City Federal said.

The survey was based on Federal Home Loan Bank Board data on second mortgages, as reported by member thrifts. Second mortgages accounted for 2.7% of total mortgage loans held by the top 300 at the end of 1987, down from 2.86% a year earlier.

Among all thrifts insured by the Federal Savings and Loan Insurance Corp., second mortgages outstanding dropped 2.07% during the year to $14.3 billion, according to the Bank Board data.

But SMR Research Corp., Budd Lake, N.J., said the Bank Board data are misleading. A study by SMR shows that the thrift industry actually increased its second mortgage holdings by a full 40% last year, to $42 billion.

Jeffrey Tuchman, a vice president at SMR, said the Bank Board figures understate second mortgage activity by failing to count second mortgages held by thrifts with first mortgages collateralized by the same properties.

In addition, he said, thrifts often report their home equity lines of credit as consumer or home improvement loans, rather than second mortgages — a practice that a Bank Board official said is allowable.

Richard Pickering, deputy director of policy and economic research at the Bank Board, said its second mortgage information "is still of value even though we know there is this peculiarity in reporting." He said he doubted the Bank Board data were as seriously skewed as the SMR study might suggest.

Some of the confusion may soon be alleviated. Beginning with the quarter ending in June, Mr. Pickering said, the Bank Board will require thrifts to disclose their holdings of home equity lines of credit, regardless of whether the thrifts consider the loans second mortgages or consumer credit.

Data Source: All data are taken from the Quarterly Financial Report to the Federal Home Loan Bank Board. Most of the thrifts reporting to the FHLBB are FSLIC-insured institutions. Most FDIC-insured thrifts are excluded. Data were provided by **ADP Data Services Division, New York. Second Mortgage Loans** are all mortgage loans secured by junior liens, except those where the institution holds all prior liens. **Total Mortgage Loans** are the unpaid balance of all mortgage loans and contracts held as assets of the bank. Included are first and second mortgages and mortgage-backed pass-through securities. **Ratio:2nd Mtg. Loans/Total** is second mortgage loans expressed as a percentage of the institution's total mortgage loans and contracts. **N.A.— Not available. (r)—** Revised by the thrift

Data Source: All data are taken from the Quarterly Financial Report to the Federal Home Loan Bank Board. Most of the thrifts reporting to the FHLBB are FSLIC-insured institutions. Most FDIC-insured thrifts are excluded. Data were provided by **ADP Data Services Division, New York. Second Mortgage Loans** are all mortgage loans secured by junior liens, except those where the institution holds all prior liens. **Total Mortgage Loans** are the unpaid balance of all mortgage loans and contracts held as assets of the bank. Included are first and second mortgages and mortgage-backed pass-through securities. **Ratio:2nd Mtg. Loans/Total** is second mortgage loans expressed as a percentage of the institution's total mortgage loans and contracts. **N.A.— Not available.**

Issues Boost Core Capital In Japan

By JAMES R. KRAUS

NEW YORK — Japanese banks this year will issue between 1 trillion and 2 trillion yen in equity to meet new capital adequacy guidelines, Japanese bankers here have predicted. At current exchange rates, that is between $7.75 billion and $15.5 billion.

Sources said banks are taking advantage of bouyant securities markets in Tokyo to boost equity.

Banks issued an estimated 1.7 trillion yen (about $13.18 billion) worth of yen-denominated shares and convertible bonds, as well as Swiss franc- and dollar-denominated convertible bonds during the year ended March 31.

The proposed capital guidelines set by the Bank for International Settlements are scheduled to take effect by the end of 1992. Equity is also being issued to comply with Japanese Ministry of Finance guidelines effective in 1991 that set a 6% minimum for total capital-to-asset ratios.

"If the Tokyo markets continue to be favorable, the banks won't miss a chance to raise equity," said Yuko Oana, managing director and general manager of Dai-Ichi Kangyo Bank Ltd.'s New York office.

Analysts estimate that Japanese banks will have to issue up to 5 trillion yen (about $38.75 billion) worth of equity between now and 1992 in order to keep up with normal asset growth.

"Our estimates are that if banks continue to expand their assets at the normal rate, there will be a 5 trillion yen shortfall" in required capital," said Akihiko Ito, chief economist with Yasuda Bank and Trust Co. (U.S.A.).

Mr. Ito said that bankers are confident that securities markets will respond favorably to new issues given healthy prospects for the Japanese economy.

Capital-to-Asset Ratios At Japanese Banks

Capital Standards Won't Open Japan, Bank Experts Say

NEW YORK — Efforts to harmonize Japan's banking regulations with those in the United States will not automatically smooth the entry of American banks into the Japanese market, analysts and bank executives are predicting.

The executives spoke June 16-17 at a conference on doing business with Japan, sponsored by the American Banker-Bond Buyer. They also predicted that new international guidelines requiring generally higher capital could make Japanese banks still stronger than their U.S. counterparts and lead to new inroads into the U.S. market.

"Many observers have commented that Tokyo may well remain the most restrictive of the major international financial centers for some years to come," said Joseph Diamond, a partner in the New York office of Skadden Arps Slate Meagher & Flom.

Mr. Diamond and other executives stressed that Japan's broad cultural differences will continue to restrict the entry of foreign banks.

"In part, this restrictiveness is a reflection of the segmented banking system in Japan. But it also derives from close informal channels of communication between regulatory officials and domestic banks," Mr. Diamond said.

"We all are niche players in Japan," said John F. Loughran, senior vice president of the Asia-Pacific department at Morgan Guaranty Trust Company of New York.

Complicated cross-ownership among banks and other concerns, and powerful business relationships binding Japanese banks with Japanese customers, have been the bane of foreign banks seeking to enter the market, he said.

Mr. Loughran said he hopes the new capital guidelines will loosen some of these links and free up banking in Japan by forcing the larger banks to divest themselves of some of their industrial and commercial shareholdings.

"Barriers have fallen but market practice will prevent most U.S. companies from participating in indigenous business," said Mark J. Lerner, vice president of the Japan banking group at Merrill Lynch Capital Markets. "The expertise that needs to be sold is expertise in U.S. markets," he said.

Merrill Lynch is now concentrating on business between Japan and the United States, which will hopefully lead to domestic business within Japan.

Higher capital ratios, required of both Japanese and U.S. banks under proposed guidelines by the Bank for International Settlements, should create a slightly more level playing field in Japan, said Mr. Diamond. "However, it is important to remember that large Japanese banks may find it easier to raise additional capital through stock offerings than will money center banks from the U.S.," he said.

"Japanese bank stocks typically command premium prices from the investing public," he said, whereas stocks of U.S. money center banks are depressed. If this continues, Mr. Diamond said, "the largest U.S. banks may be forced to trim their assets quite significantly," putting them at a competitive disadvantage.

According to John V. Rindlaub, managing director-corporate finance at Bankers Trust Co., Japanese banks will carry out further acquisitions in the U.S. market as part of an ongoing effort to develop product expertise, build up a local banking operation, and possibly move into broader banking activities.

"A Japanese financial institution does figure in your future," Mr. Rindlaub said.

California First Inks Community Reinvestment Pact

➥ **Continued from Page 1**

tion of Community Organizations for Reform Now, known as Acorn.

Called the community service action plan, the agreement provides commitments for $36 million in loans 1989 and $48 million in 1990 for housing, rehabilitation, consumer, and small business.

Negotiations for the special lending commitment began after California First announced last February that it was buying Union Bank, Los Angeles, from Standard Chartered PLC, London, in a deal valued at about $750 million.

When the merger is completed later this year, the combined institutions will be called Union Bank and will have more than $15 billion in assets and 167 offices around the state.

A spokesman for California First, which is based in San Francisco, confirmed that the agreement with the community groups had been reached but said the document was not scheduled to be filed with the Federal Deposit Insurance Corp. until late Thursday. The FDIC and state banking authorities must approve the merger of California First and Union.

Community groups involved in the negotiations praised the agreement.

"This plan is a financial blueprint for the 21st century and demonstrates California First's commitment to serve the lending and economic development needs of the entire community," said Robert Gnaizda, staff attorney for Public Advocates, a nonprofit public interest law firm in San Francisco.

Elena Hanggi, a member of the Federal Reserve's consumer advisory council, said the agreement represented a breakthrough because a Japanese-owned bank has made a greater commitment for low-income housing loans that have most domestic banks.

"We applaud Cal First's willingness to take a leadership role in this area and hope that other commercial banks follow their lead," added Ms. Hanggi. She is the former president of Acorn, which participated in the negotiations with California First and is a national leader in obtaining loan commitments under the reinvestment act.

"We recognize that with the greater size our merger with Union Bank will bring, we must accept a broader responsibility to the community we serve." said Seishichi Itoh, president and chief executive officer of California First.

Passed by Congress in 1977, the Community Reinvestment Act requires a financial institution to meet not only the deposit needs but also the credit requirements of the community in which it is located. Under the act, federal regulators must consider a bank's community record when deciding on a merger application.

Increasingly, activist groups are using the law to obtain commitments from banks and thrifts to make available millions of dollars in loans for housing, rehabilitation, and small businesses in hard-pressed communities.

Allen J. Fishbein, general counsel of the Center for Community Change in Washington, said reinvestment act agreements have increased dramatically in the past three years, reflecting the increase in mergers among financial institutions.

Many of the agreements are not made public, but the 55 that were disclosed last year totaled $1 billion, said Mr. Fishbein. The Center for Community Change, which advises community groups on banking and reinvestment, also publishes the *CRA Reporter*, a newsletter that keeps track of agreements reached under the act.

"I like to think that banks find this is good business," said Mr. Fishbein. "There is no question that this kind of lending can succeed." ■

FDIC Approves Merger Of Massachusetts Thrifts

PORTLAND, Maine — The Federal Deposit Insurance Corp. has approved the merger of two Massachusetts banking companies in preparation for their acquisition by the One Bancorp of Portland.

The approval was granted to the Southstate Bank for Savings, a $220 million-asset institution in Brockton, and East Weymouth Savings Bank, a $95 million-asset thrift in Weymouth.

The merger is contingent upon the acquisition of Southstate by the One Bancorp, which has $2 billion in assets. The merger also depends on regulatory approval by Massachusetts banking authorities.

The One Bancorp announced in August that it would pay $18 cash for each of the 2.3 million outstanding common shares of Southstate, for a total of $41.4 million.

The One Bancorp's agreement with East Weymouth, announced in December 1987, calls for East Weymouth shareholders to receive $20 in cash per share, for a total of $19.8 million. ■

NEWS MONDAY

The Comptroller's analysis of why banks fail might have overlooked one culprit — the regulatory agency itself. The agency might have been too free in issuing new bank charters and too lax in ensuring safe and sound operations, writes Bart Fraust in the Perspective column. ——— 9

Money-laundering fears have resurfaced, and officials here and abroad are considering get-tough plans. Proposals include undercover sting operations, more transaction reports from banks, and fewer restrictions on access to financial records. ——— 3

International capital rules will be refined when bank regulators from 12 western countries meet in Basel, Switzerland. ——— 10

INSIDE

A wave of mergers is not likely to occur if Massachusetts moves to permit nationwide banking. ——— 2

A legal wrangle over the exportation of credit card fees was settled when Sun Bank, Orlando, agreed to recompute a North Carolina cardholder's balance in line with North Carolina law rather than with Florida law. ——— 2

Texas would allow statewide branching for national banks under a ruling in federal district court that struck down the state's 84-year-old ban. ——— 2

Workers/Workplace: After the stock market crash, a number of companies with long-term incentive plans have canceled outstanding stock option grants for reissue at a a lower exercise price, a survey finds. ——— 13

Start-up banks in Pennsylvania are finding seed capital in larger banks. The big fish hope to leverage their expertise and profit from their investments. ——— 24

COMMENT

An outside consultant can readily point out the follies of some practices that banks have employed for years, writes Dr. Paul S. Nadler. ——— 4

Gov. Cuomo's handpicked commission has failed to offer tough solutions to problems looming for the U.S. economy, writes H. Erich Heinemann. ——— 5

Worth Repeating

I'm 99% sure that the independent bankers around Texas will do everything they can to see the fight carried on.

Charles N. Brewer, president of Reunion Bank, Dallas, after a federal district court struck down a Texas ban on bank branching. [Page 2]

Big NY Banks May Spin Off Chips Network

By YVETTE D. KANTROW

NEW YORK — In its continuing quest to control risk, the New York Clearing House Association may spin off Chips, its large-scale electronic funds transfer system.

Clearing house officials are considering a plan to convert Chips into a state-chartered, limited-purpose trust company, which would be eligible for membership in the Federal Reserve System. The move, according to John F. Lee, executive vice president of the clearing house, would provide legal protections for any of the system's users against the failure of another participant.

Chips — the Clearing House Interbank Payments System — is operated by the 12 banks that own the New York Clearing House Association. The system now moves nearly $1 trillion a day among 137 participating banks and is the principal mechanism for settling international transactions denominated in dollars.

In its nearly 20 years of operation, none of Chips' participants have failed. But its operators and bank regulators agree that such an event could be catastrophic for the world's payment system. If one bank on the network were to fail, it could set off a chain reaction of failures, as banks relying on payments from the failed participant could not cover their own payment obligations.

Banks that use Chips transmit funds-transfer instructions among themselves electronically. Settlement of those transactions — the actual transfer of cash — occurs at the end of the day.

For example, during the course of a day, Bank A may send instructions to

An American Banker Special Report

Number of New Financial Firms Declined by 34% in '87: Survey

Failures Surpassed Openings for 1st Time Since '30s

By KENNETH J. HICKS

NEW YORK — The number of new financial institutions plunged in 1987 for the third consecutive year, according to an *American Banker* survey.

The survey identified 169 financial institutions that opened last year, a 34% drop from 1986, when there were 258, and down from 280 in 1985.

And for the first time since the Depression, more commercial banks failed in one year than were opened. There were 136 new commercial banks, versus 184 failures.

Reasons cited for fewer openings were increases in minimum capital standards and closer scrutiny by regulators.

The commercial banks that opened comprised 80% of the new institutions. There were also 12 new thrifts, 11 credit unions, and 10 trust companies. More than a third of the new institutions were in the Southeast. (Tables on the new companies begin on page 15.)

Seed Capital for New Banks Page 24

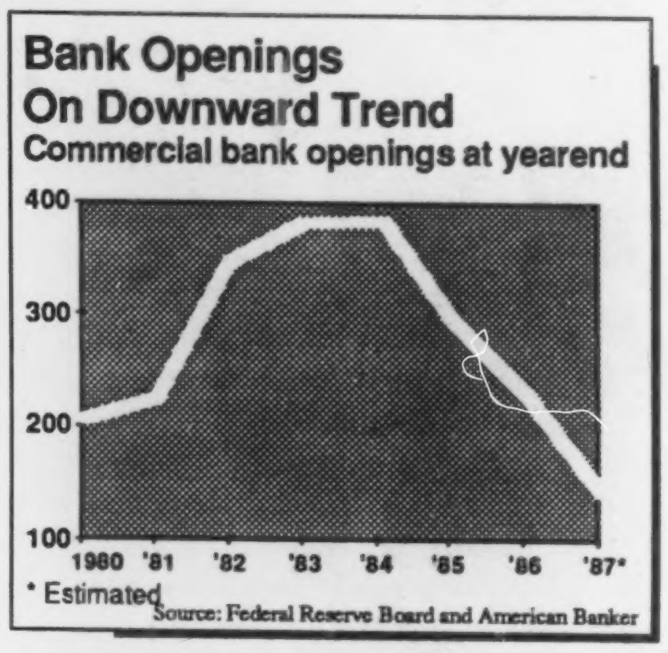
Two-thirds of the new institutions responding to a mailed survey said they were targeting a special segment of the population.

The number of new commercial banks dropped 31%, from 198 in 1986. This continued a downward trend. More than 300 banks had opened each year from 1983 to 1985, peaking at almost 400 in 1984. Until 1986, at least 200 commercial banks had come into existence during each year of the 1980s.

Of the commercial banks that opened in 1987, 98 were state chartered and 38 were federally chartered, according to the *American Banker* survey. In 1986, 115 national banks and 83 state-chartered banks popped up in the United States.

Bank Openings On Downward Trend

Commercial bank openings at yearend



* Estimated

Source: Federal Reserve Board and American Banker

The *American Banker* compiled the data from several sources, including the Comptroller's office, the Federal Reserve Board, the National Credit Union Administration, state banking and savings and loan departments, press releases, and mailed questionnaires. The survey counted only actual openings and excluded applications.

Deborah Bateman, managing director of the Bateman Group, a consulting firm based in Phoenix, believes part of the reason for fewer openings is that "regulators are being much tougher" when it comes to charter approvals. While she did not foresee a severe decline in the number of bank start-ups, Ms. Bateman believed the number of

Outsider Can Point Out Banking Follies with Ease

By DR. PAUL S. NADLER

TRADING banking stories with Peter Louderback — principal of the Earnings Performance Group of Chatham, N.J., and a leading banking consultant with Peat, Marwick, Mitchell & Co. for 22 years — reminds you of how much fun banking really can be.

At lunch earlier this month, Pete told me the story, reputed to be true, of the national bank examiners who went into a small midwestern bank under the old rules of operation. They showed up first thing in the morning, unexpected, spread out — with examiners at each teller station, in the vault, and elsewhere — and almost took over the bank. As examiners used to do, they started a normal week's exam of everything from counting the cash to examining the loans.

About half an hour into the exam, the head examiner realized he was in the wrong bank! Instead of being in the national bank in town, he had come into the state-chartered bank across the street.

What to do next? He thought fast.

Nadler Says:

Why have high service charges that are not enforced half the time? Why not have lower ones that have to be maintained?

The lead examiner told all the examiners and all the top officers to report to the board room immediately. He sat the examiner near the door, then addressed the crowd:

"Now listen. We did a test. We are national bank examiners. We were not supposed to be allowed in here, and you didn't even ask for our credentials. You have failed this test, and we are gong to report you to the proper state bank authorities."

With the announcement, he turned to his staff and said, "All right. Now let's get out of here."

Pete uses the same type of smarts and whimsy in handling his clients.

The basic function of his company, which now employs more than 40 people, is to help banks improve earnings by reducing noncredit expense and increasing noncredit earnings. In today's world of gap management and variable-rate deposits and loans, many banks have found that this noncredit area is the most fruitful place to increase the bottom line.

Nuts and Bolts of Troubleshooting

What do Pete and his Earning Performance associates do?

Sure, they work on the big things. And his fancy brochure talks about streamlining back-office operations, product pricing, waiver practices, staff reduction, and branch profitability.

But sit down to lunch with Pete and you learn that his bread-and-butter value to banks is the outsider's perspective, to point out follies of practices that have been employed for years. Some examples follow.

Banks set service charges that should compensate for services provided. Yet, all too often, the individual branch manager or other contact person waives the charges out of fear of alienating the customer. This often makes unprofitable the individual account of which the contact officer is so solicitous.

Maybe the account is held by a former employee, a friend of the banker, or someone whose business was far more valuable when the account was opened and the service charge was waived than it is today. But the waiver has never been removed from the computer record.

Why have high service charges that are not enforced half the time? Why not have lower ones that have to be maintained? Pete suggests that a bank with a policy of charging $30 for a check written on insufficient funds and a capture rate of 40% would be far better off with a $20 charge and stiffer standards that lead to a 90% capture rate.

In talking about how marketing people frequently impose waivers on collection of service charges, Pete reminds me of Charlie Agemian, the retired banker and lecturer. He always used to say, "The function of the marketing department, as I see it, is to give away the bank."

Pete reports that when he talks about waiver practices to management, they usually reply, "I didn't know things were that bad."

Pete also tells of the bank that has a two-day to five-day hold period on obtaining funds against a deposited check. But if the customer splits the deposit to get some cash back, the bank accepts the entire deposit as good immediately so that the transaction will be less complicated.

On top of the float and risk involved, the procedure takes a teller two minutes to complete with a split check, while it takes only 45 seconds if the entire check is deposited and the normal delay on availability is imposed. Changing that practice can result in substantial bottom-line improvement.

Pete points out that many banks have a lower service charge for a stop-payment than for an overdraft. So naturally, when people write checks beyond their balances, they call in with stop-payments and give the bank extra work. The banks, meanwhile, earned less than they would have if the customers had let the checks bounce in the normal manner.

Penny Wisdoms, Pound Follies

When Earnings Performance pointed this out to one bank, the chief executive replied: "We will wait till June when we publish our new price list for services, and then we will correct this."

To Pete, this means the bank gave up about $400,000 in income to save $2,000 or so in printing costs for a new price list.

Pete firmly believes the day is near when bankers will charge for their time as lawyers and accountants do.

He steams when he sees a bank officer helping someone balance a checkbook and not charging for this service. He also gets mad when he sees his investigations and suggestions stopped at middle management out of fear of what will happen if the recommendations go to the top. The chief executive might ask why things haven't been changed before.

Many banks continue giving extra copies of customer statements without charge, balancing checkbooks for free, and keeping more cash at each branch than is needed, at the cost of extra reserves and higher insurance costs. All this is simply because no one has stepped back and analyzed the procedures to see if they make sense today.

Who works for Earnings Performance? Pete is proud to say that in addition to technical people, one of his most effective employees is an individual who never had any formal business education but worked for several decades as a teller. She goes into a bank, looks at how every piece of paper crosses each desk, asks why each process is necessary, and even examines how the desks are arranged.

Pete believes branches should eliminate much of their operations function and serve as selling locations for customers instead of paper-processing centers. He also gets upset when he sees a computer system that only allows the front-line people to read a screen and know what has happened. He wants the scope to allow data entry; that would avoid a second operation later, after the initial transaction with the customer has taken place.

He looks at the contact-area equipment as an information base to cross-sell, and if it does not serve this function, he considers it a lost opportunity.

Pete's views on ATMs are straightforward: Charge if the customer uses an ATM other than those operated by the customer's own bank. The customer will pay for the convenience.

Place the ATM on the wall of the

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 6.

1. According to a special report by this newspaper, what management strategy — which has cut some costs by 25% to 30% in the hospital industry — might have the potential to work equally well for financial institutions?

2. In a study of why banks fail, prepared by the Office of the Comptroller of the Currency, what was the leading characteristic found at 85% of the 171 institutions that have failed since 1979?

3. While credit from banks and finance companies appears to be generally available to small businesses in New York State, survey interviews by Interface — a not-for-profit research group — find that bankers in the Empire State are most reluctant to provide credit to small operators in what type of business?

$
Commercial Lending

4. The Federal Deposit Insurance Corp. closed the bidding on June 17 for bulk sale of an $874 million portfolio of poor-quality loans from Chicago's Continental Illinois Corp. The agency had set a minimum price of 34 cents on the dollar for these loans. What was the outcome of the bidding?

5. What big banking company led the financial services industry — and placed sixth among all corporate political action committees in the U.S. — with $375,000 in PAC donations to candidates and the related promotion of big-bank issues, as reported to the Federal Elections Committee for the 15-month period ended March 31?

6. Based on this newspaper's survey of data from the federal regulatory report of condition for Dec. 31, 1987, do the top 300 commercial banks in the U.S. hold more business loans or more consumer loans?

7. In this excerpt from a speech delivered in 1948 by Orval Adams, former president of the American Bankers Association, fill in the blanks with the missing term: ".....is a gift to the world from an all-wise creator. The ..... standard is the automatic watchman on the tower of the government of free man, to guard against the poison of totalitarianism entering the bloodstream of sound money."

8. Although the well-known communication services company claims it did not deserve this species of notoriety, Western Union won a Harlan Page Hubbard award from the National Consumers League in Washington for its television advertising campaign dramatizing several situations in which desperate travelers got fast access to money in emergencies via Western Union wires. Who was Mr. Hubbard, and why did Western Union repudiate the award given in his name?

9. For nearly a century the IDS Certificate Co., Minneapolis, has been successfully marketing an investment product known as the face-amount certificate, closely resembling a bank CD. Sold in a range of denominations from $1,000 to $500,000, but yielding up to 25 basis points more than the national average for comparable bank CDs, the IDS product logged cash sales of $491 million in 1987. In what important aspect does the IDS face amount certificate differ from a bank CD?

—Robert Paul Molay

Ranking the Financial PACs: Who Are the Big Fundraisers?

WHAT do Central Bankshares of the South Inc., Citicorp, Barnett Banks Inc., First RepublicBank Corp., and MCorp have in common? Very little, usually, but all of these institutions are leaders in raising funds and distributing them through their political action committees — PACs. Central Bankshares and First Republic, for instance, rank among the top 50 corporate PACs in receiving funds between Jan. 1, 1987, and March 31, 1988, according to Federal Election Commission data released last week. MBank ranks among the top 50 corporate PACs in disbursements during that same period.

In all, PACs raised more than $213 million and spent just over $162 million in those 15 months, the election commission said. Candidates seeking election in 1988 received $56.4 million during this period, a 34% increase from two years ago, when the last election cycle occurred.

Below are three tables showing some highlights of the top financial trade group and corporate PACs and what they have contributed in this election cycle to federal candidates.

PACs: Who Gave The Most?

Rankings Among Top 50 PACs

Rank	Trade Group/Firm	Contributions
2	**National Association of Realtors**	$982,115
12	**National Association of Home Builders**	$565,971
18	**National Association of Life Underwriters**	$471,756
22	**American Bankers Association**	$380,900
32	**American Institute of Certified Public Accountants**	$292,559
35	**Independent Insurance Agents of America**	$273,854
41	**U.S. League of Savings Institutions**	$252,250
42	**Credit Union National Association**	$251,625
45	**Citicorp**	$240,244

Trade groups or corporations in the financial services or related industries operated 9, or 18%, of the top 50 PACs ranked by contributions. The National Association of Realtors' PAC was the nation's second largest PAC contributor, topping the National Association of Home Builders PAC by more than $400,000 and the American Bankers Association's BankPac by more than $600,000. Citicorp is the only financial firm to appear among the top 50 PACs.

Which Companies Gave the Most?

Rankings Among Top 50 Corporate PACs

Rank	Corporation	Contributions
6	**Citicorp**	$240,244
11	**Barnett Banks Inc.**	$193,000
13	**J.P. Morgan & Co.**	$178,250
25	**First Boston Corp.**	$158,000
27	**E.F. Hutton & Co.**	$151,421
33	**Goldman, Sachs & Co.**	$139,700
41	**Prudential Insurance Co.**	$120,562
46	**Travelers Corp.**	$109,000
47	**Morgan Stanley Group Inc.**	$108,000
50	**Aetna Life and Casualty Co.**	$103,166

Only five corporate political action committees — AT&T, United Postal Service, Philip Morris, Federal Express, and Textron — reported larger contributions than the Citicorp PAC to federal candidates during the 15-month reporting period from Jan. 1, 1987, to March 31, 1988. Of the top 50 corporate PACs, 10, or 20%, were operated by financial institutions, and others — including J.C. Penney, Chrysler, and TRW — were in related activities.

Leaders Among Mutual Firms

Rankings Among Top 50 PACs of Nonstock Corporations

Rank	Corporation	Contributions
1	**Chicago Mercantile Exchange**	$226,650
4	**Equitable Financial Services**	$124,000
6	**Massachusetts Mutual Life Insurance Co.**	$89,401
9	**New York Life**	$52,422
11	**New England Mutual Life Insurance Co.**	$43,850
12	**Connecticut Mutual Life Insurance Co.**	$37,700
13	**MONY**	$31,250
15	**Chicago Board of Options Exchange**	$26,500
17	**John Hancock Financial Services**	$25,000
28	**Glendale Federal Savings Association**	$11,600
34	**San Antonio Savings Association**	$6,500
37	**Empire of America Federal Savings Bank**	$5,925
47	**Pioneer Federal Savings and Loan Association**	$3,283
49	**People's Bank**	$3,143

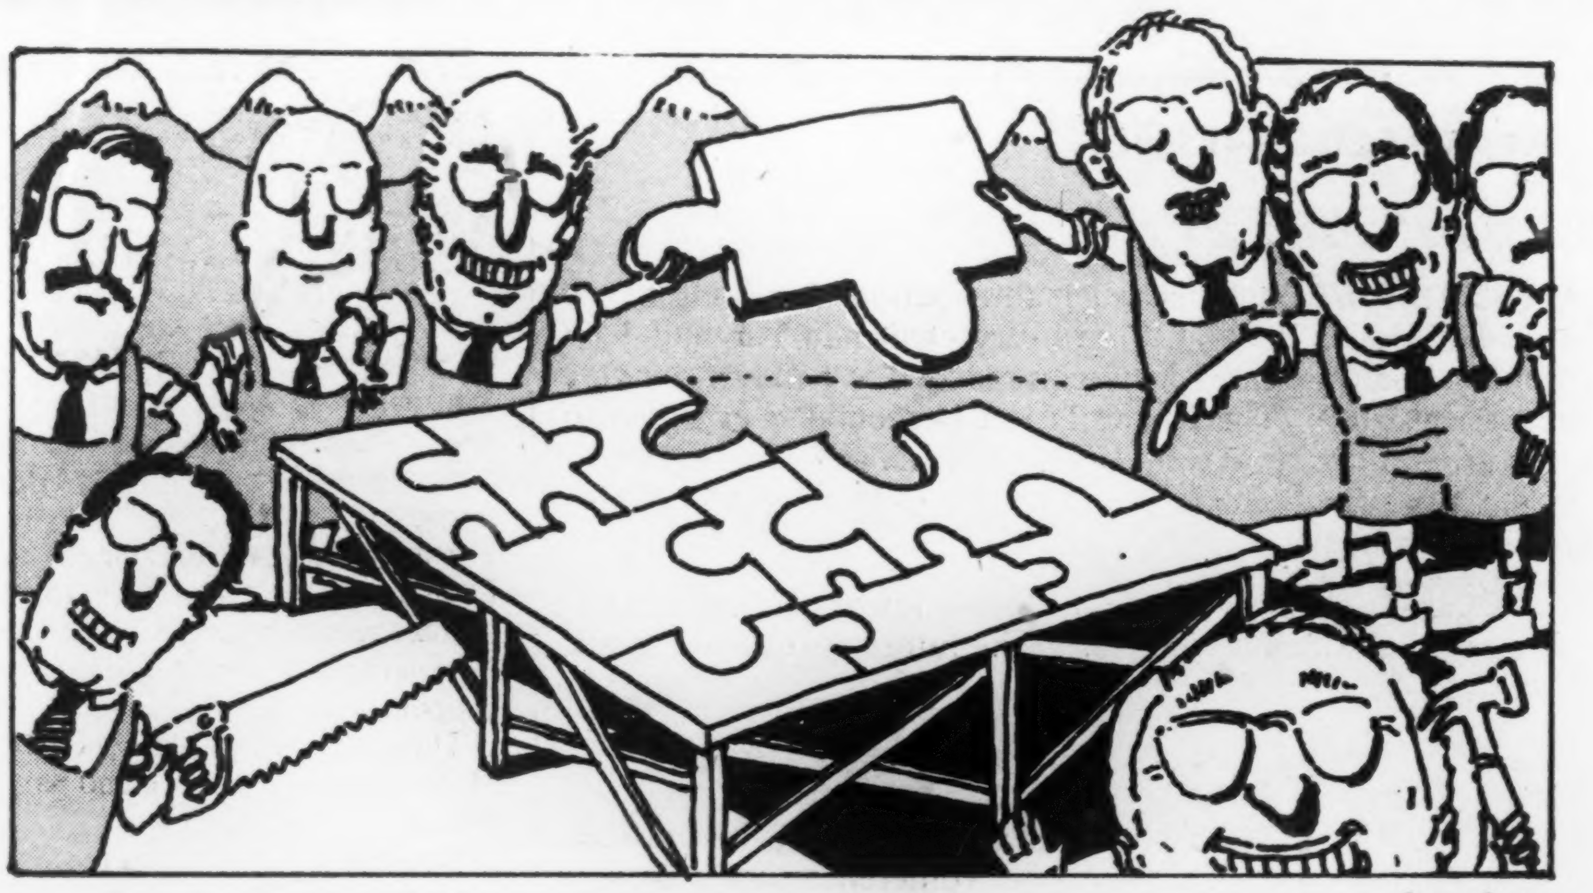
Mutual insurance companies and savings banks dominate the list of largest PAC contributors among nonstock corporations. Equitable topped the insurance firms with contributions, while Glendale Federal was the savings institution giving the most to federal candidates.



James Jones

Finishing a Risk-Based Puzzle

At Basel Session, International Capital Rules Near Completion

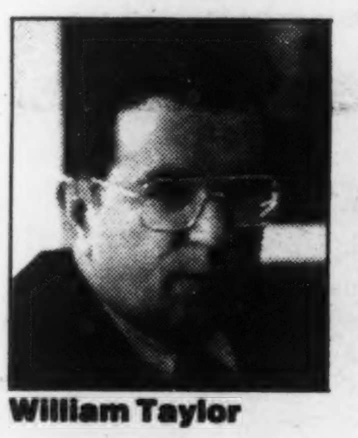
By BARBARA A. REHM

BANK regulators from 12 western countries will meet in Basel, Switzerland, today and tomorrow. Their mission: refining a risk-based capital proposal.

Begun more than two years ago, the risk-based capital plan will force banks to back riskier assets with more money. It will also require capital for off-balance sheet items for the first time.

The industry was given time to persuade the regulators to make changes. After studying comments made on the plan, representatives from the Federal Reserve Board, the Federal Deposit Insurance Corp., and the Comptroller of the Currency have gone to Basel this week to bargain for changes and hash out final capital rules.

Some of the hottest points of contention here in the United States — such as requiring the same capital backing for home mortgages as for other, more risky types of loans — will not get much attention this week as the negotiators focus more on questions common to all 12 nations.



William Taylor

Based on interviews with regulators and industry sources last week, the big topics on the table in Basel will be:

- Whether perpetual preferred debt should be counted as primary capital.
- Whether parent companies of banks should be forced to adhere to the capital guidelines.
- Whether capital backing loans to countries should vary based on the economic health of those countries.
- Whether the quality of collateral backing a loan should affect what risk weighting is assigned.

The Basel negotiations are being conducted at the Bank for International Settlements, which is the central bankers' bank. This session is a forerunner to a formal vote by the governors of the international bank, who are central bankers from each member country. The U.S. delegate is Federal Reserve Board Vice Chairman Manuel H. Johnson.

The next meeting of the BIS governors is set for July 10. A final vote could be taken then, but sources said the governors probably will use the July meeting to go over what the staff develops this week. A final vote could be taken in August.

William Taylor, director of the Fed's supervision and regulation division and one of the regulators meeting in Basel, described in an interview what he expects to happen.

"They'll get to be long days," he admitted, noting that one meeting of international regulators on risk-based capital did not adjourn until midnight. "Everyone gets to say what they want to say."

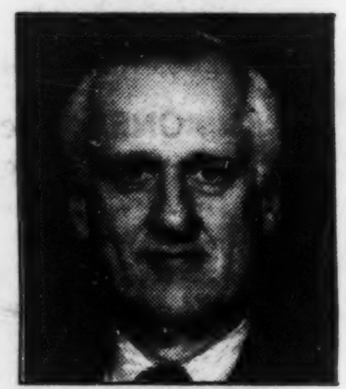
The other three U.S. regulators attending today's meeting are Paul G. Fritts and Dean S. Marriott, who, respectively, oversee bank regulation at the FDIC and the Comptroller's office, and Irwin D. Sandberg, senior vice president for foreign relations at the Federal Reserve Bank of New York.

After the BIS governors approve a refined version of the risk-based capital plan, the final rules will then be considered by each country.

As the proposal now reads, bank primary capital would have to be composed strictly of common equity and would have to equal 4% of risk-weighted assets by the end of 1992. Total capital-to-asset minimums will be 8% by then, with the additional 4% comprising subordinated debt, loan-loss reserves, and so-called hidden reserves, among other things.

COMPLAINTS by the industry have centered on the argument that perpetual preferred is just as able to absorb losses as common equity and thus should be treated as primary capital. The criticisms from congressmen, banks, and rating agencies appear to have convinced U.S. regulators. Sources agreed last week that other countries probably will accede to this request.

If they do, big U.S. banks will have less trouble meeting the higher capital standard. Most regional and smaller banks already hold at least 4% common equity.



Dean S. Marriott

Whether the nonbank financial parents of banks must meet these capital minimums is more controversial. The Fed wants bank holding companies to subscribe to the new capital rules. Other countries, which don't have bank holding companies, per se, but do have insurance companies that own banks, are less enthused about extending risk-based capital rules to these companies. (The FDIC agrees the rules should only apply to banks.)

This debate is more likely to be resolved by the BIS governors than the staff this week, sources said. Mr. Taylor appeared to confirm this when he said: "We will probably come back with a more defined proposal with maybe this or that left open."

Mr. Taylor identified the questions of country risk and collateral as two other issues still subject to debate.

Paul G. Fritts

Should an asset, such as a government security, be weighted differently when it is held directly by a bank than when it is backing a loan the bank has made?

Whether collateral should be treated as a direct obligation, however, raises the thorny question of how to gauge the risk of specific collateral.

Just as contentious is ranking the risk of one country against another. Is Great Britain more likely to pay back a loan than Brazil? What about each country's banks? Which are more stable? Everyone involved seems to know the answers to such questions — but no one wants to say them out loud. The rub is detailing what factors would be used to determine a country's riskiness.

Under the current proposal, claims on domestic banks carry a smaller capital requirement than claims on foreign banks. But that raises the question of whether a loan guarantee, for example, issued by Manufacturers Hanover Trust Co. is less risky than one from West Germany's Deutsche Bank, sources suggest.

These three issues will be aired in Basel, but it is doubtful they will be acted on — at least not now. Risk-based capital is likely to be approved later this year in much the same form as it was proposed last January. ■

June 27, 1988, American Banker

Number of New Financial Firms Fell Again in '87

Commercial Bank Failures Surpass Openings for First Time Since the Depression

Continued from Page 1

bank openings will remain low.

The trend follows a bell curve, she said. "The number of banks decrease and the size of banks increase" during a merger and acquisition frenzy. "We're looking at a five-year window, so that it probably won't be until 1992" that new charters begin to edge up again.

In addition, charter application fees and minimum capitalization levels have been rising. For example, the Comptroller's office raised its application fee to more than $15,000 from $6,000.

In 1986, capitalization for a new institution averaged $3.6 million. For 1987, that figure climbed to about $4 million.

In Georgia, where five new financial institutions opened in 1987, the minimum capitalization was raised from $1 million to $3 million. The minimum is $5 million in urban areas of the state. The initial capitalization of Georgia banks averaged $6.9 million in 1987, compared with $4.4 million in 1986.

Both state and federal authorities are taking a much closer look at the management and directors of any proposed bank. In 1985, the Comptroller's office ruled that a proposed bank must have a chief executive officer in place to be granted a charter. This gives a bank a better chance of success as management is "a critical component of the charter application."

Opponents of the rule contend that few chief executive candidates are willing to commit themselves to an uncertain venture.

Almost 40% of the new institutions in 1987 were in the Southeast. Of the 63 financial institutions that opened in the region, 32 were in Florida. In the past two years, 65 new financial institutions have opened in the state, compared with 6 closings.

Florida was followed by Texas with 17 openings in 1987. In the past two years, openings have edged out closings in Texas by 79 to 76. California, Missouri, New Jersey, and New York followed in the ranking with eight openings each.

Of the 73 institutions that responded to a query on an *American Banker* questionnaire, 48 said they targeted a specific segment of the community. Twenty-three sought upscale clients; 25 considered themselves community banks.

Merger mania may have opened the door for smaller banks to take advantage of specific niches that big banks lack the flexibility to address.

During a time of consolidation in the industry, with more small, community banks being gobbled up by superregionals, concern mounts about banking services for the average person.

State and federal authorities are taking a much closer look at the management and directors of any proposed bank. In 1985, the Comptroller's office ruled that a proposed bank must have a chief executive officer in place to be granted a charter.

An *American Banker* survey of consumer attitudes for 1987 showed that most customers of banks that had been acquired believed service quality had declined since the takeover. Among banks that had merged, most consumers believed service remained the same (57% in 1987 against 54% in 1986).

But only 14% of customers of merged institutions felt their banking services had improved since the merger, compared with 24% in 1986. There was a corresponding decrease in those who felt service was better since the merger — 19% vs. 14%.

In the survey, Edward E. Furash, president of Furash & Co., a Washington-based consulting firm, noted that some customer dissatisfaction stems from the way mergers are heralded.

"Banks usually promote the improvement that the consumer should get in terms of benefits from the new institution," Mr. Furash noted. "This results in raising consumer consciousness and making the consumer more critical of what he does get."

The fact that fewer customers find conditions improved at their banks may indicate that "banking is short of good managers," Mr. Furash said. "It's too easy to slide over the little things that make a difference . . . and create customer unhappiness."

Rapid turnover among tellers and branch managers were the primary complaints of customers served by the new banking giants, according to a *Wall Street Journal* article of April 20 that looked at the incursion of the superregionals into the Florida market.

The *American Banker's* consumer attitude survey found that consumers are becoming more concerned with service quality than convenience. Tom Hefter, of the Financial Institutions Marketing Association, a U.S. League of Savings Institutions affiliate, said errors made by new computer systems in merger situations can touch off customer dissatisfaction.

Financial institutions should "upgrade and expand the level of communications that they have with customers," Mr. Hefter said, "so the customers feel they are a part of it [the merger] from the very beginning."

In a speech given to the American Bankers Association's American Institute of Banking, Thomas A. Cooper, chairman of Invest, a Florida-based insurance and securities firm, and former president of Bank of America, San Francisco, also warned that consumers increasingly are choosing their financial services providers by value and not tradition.

"Consumers are not particularly concerned whether the provider is a bank, a thrift, a stockbroker, an insurance company, a carmaker, or a department store," Mr. Cooper said. "The message from consumers to bankers — as to automakers, toaster makers, shirtmakers — is the consumer will no longer pay for inefficiency in any industry."

One of the more interesting specialties reported by a new institution was a decision to target young people. Young Americans Bank, Denver, a state-chartered commercial bank, aims to provide banking services and education to people under 22 years of age. The bank, which opened Aug. 3, 1987, had assets of $3.5 million and deposits of $2.2 million at yearend. It reached the

Bank: Page 18

Boston Private Bank Caters to the Well-Heeled

NEW YORK — Boston Private Bank & Trust Co. is dedicated to the practice of banking "to fit the client's convenience, rather than the banker's," according to Robert H. Bradley, president.

The Boston bank, which opened on May 1, offers highly personalized banking and financial services for domestic and international clients. Boston Private has an untraditional look, with an open layout and only one teller's window, located discreetly in the rear of the bank. Transactions take place in one of four private client rooms.

"There was a conscious decision not to do any advertising in the first year or two, but rather to concentrate on public relations positioning," said Michael Stedman of Financial Marketing and Communications, Wellesley Hills, Mass., the public relations consultant for the bank.

Mr. Stedman said the bank strives for person-to-person relationships between clients and the bank's officers and directors. "The feeling was that the high level of banking and financial services available at Boston Private Bank & Trust would not be something the general population could effectively use," he explained. "Therefore, more targeted communications were chosen."

The bank strives for direct client-officer relationships.

"We provide premiums to clients who require high-quality, long-term banking relationships — sophisticated clients looking for mortgage, real estate, personal, and small business lending, as well as deposit services," Mr. Bradley said. "High-performance investment management and financial planning is scheduled by the year's end."

To attract depositors in its early phase of growth, Boston Private Bank is paying 6% on money market accounts and aggressive rates on jumbo certificates of deposit.

The bank's private bankers also will make "house calls" when necessary and provide courier service to those needing it. An elegant room is available where clients, especially those from overseas or out of town, can telephone, hold meetings, or review the latest financial news.

Ensign Trust of London, a major British investment company, has purchased a 14.3% ownership in the bank with an investment of about $1 million.

— Kenneth J. Hicks

Northside Bank Shaped to Bypass The Bureaucracy

By KENNETH J. HICKS

NEW YORK — Northside Bank & Trust Co., Roswell, Ga., is a prime example of how a new community bank is created when a local bank is acquired by a larger out-of-state bank.

Roswell Bank was bought by First Union National Bank of Georgia, a subsidiary of North Carolina-based First Union Corp., in 1985. Local leaders — including former Georgia Gov. Joe Frank Harris and chief administrative officer Tom Perdue — came together to organize Northside Bank & Trust. The idea was that a large bureaucratic bank like First Union would not be able to meet the needs of the residents of Roswell and northern Fulton County.

Further, the entire senior management of Roswell Bank flocked to Northside, including Donald D. Howard, its president and chief executive officer.

The new community bank — serving a wealthy suburb 25 miles north of Atlanta — was well received, with an initial capitalization of $10 million. At that time, it was the highest capitalization for a new bank in Georgia. Northside set a state record for opening-day deposits, with $7.2 million, and logged close to $10 million in 410 accounts within a week of the July 13, 1987, opening.

An opening-week promotion offered a $10 donation to a depositor's favorite charity. Those who opened an account within the first month were eligible for a drawing for a $1,000 deposit and matching charitable donation.

As of June 20, 1988, Northside had total deposits of $55.9 million and assets of $67.4 million.

The bank plans an aggressive growth campaign over the next few years, hence, its large capitalization. This strategy will allow Northside to "grow- . . . without forcing us to go back and recapitalize two or three years later," Mr. Perdue told the *Atlanta Journal*.

Northside bank offers a full range of consumer and commercial financial services, as well as a drive-in facility, automatic teller machine, and safe-deposit boxes. ■

A St. Louis Bank For Entrepreneurs

NEW YORK — Heritage National Bank, St. Louis, targets small businesses and consumers with an emphasis on the entrepreneur and senior citizens.

The federally chartered bank opened Feb. 9 with initial capitalization of $2 million. It doesn't have specific programs for the entrepreneur but runs newspaper advertisements directed at the small business community, a bank spokesperson said.

For the senior citizen, however, the bank runs the Heritage 55 senior citizens club. "Senior citizens receive discounts on some bank services," the spokesperson said, "as well as special activities . . . We usually have something each month."

A minimum account balance is necessary to become a member of the club. There are approximately 300 current members in Heritage 55.

As of March 31, Heritage National had $22 million in assets and $20.4 in deposits. ■

California Companies Announce Merger Plan

TUSTIN, Calif. — Citizens Holdings, Newport Beach, Calif., has announced its intention to acquire Eldorado Bancorp, Tustin, and its wholly owned subsidiary, Eldorado Bank.

Each share of Eldorado common stock will be exchanged for $15 cash, in a total deal valued at about $34.2 million. Completion of the acquisition is expected late this year or early 1989.

The $250 million-asset Citizens Holdings is owned by the Pratt family of Australia. It owns Citizens Bank of Costa Mesa, Calif., and El Camino Bank, Anaheim, Calif.

Eldorado Bancorp, the holding company of Eldorado Bank, has assets of about $240 million. Eldorado recently acquired American Merchant Bank, Orange, Calif., and now has nine offices. ■

Bank . . .

➜ Continued from Page 14

5,000-acccount mark in May of this year. Young Americans' president, Linda Sanders, is one of 12 women presidents in today's listing.

Another unusual specialty was reported by First Trade Union Savings Bank, Boston. The federally chartered thrift, which opened Sept. 10, is owned by the International Brotherhood of Carpenters and Joiners of America.

Though operated by the union, the savings bank does not serve its members exclusively. At yearend, the thrift reported assets of $74.1 million and deposits of $61.6 million.

In addition to the 12 women presidents, the listing shows 26 women in other key posts, such as treasurer, chief financial officer, and senior and executive vice president. ■

VOL. CLIII NO. 125 Tuesday, June 28, 1988 153rd Year

Today

While the nation's thrifts know they need some strong medicine, none of the tonics being offered seem likely to put the industry back on its feet. 11

The Federal Reserve Bank of New York has given primary-dealer status to three government securities dealers. Missing from the list is Yamaichi Securities International, a Japanese firm widely known to be an aspiring primary dealer. It was shut out, sources say, by political pressure. 19

Blackstone Financial Management, the firm started by the former head of First Boston Corp.'s mortgage department, has announced its first public offering — a $100 million fund that will invest nearly exclusively in mortgage-backed securities. 21

William E. Simon's investor group has finished buying enough stock in First Interstate Bank of Hawaii's parent to give it just under a 40% stake — the most it can buy without violating a gentlemen's agreement with the bank's board. ____ 32

The weekly listing of financial services stocks features regional industry groups and price indexes. __ 24

Executive Changes ____ 10

COMMENT

Comptroller of the Currency Robert L. Clarke argues that in the majority of cases banks are not the prisoners of fate — that even in depressed economies, banking performance is primarily the result of managerial behavior. ____ 4

Values are especially important to service organizations; they need to be reinforced and adapted; and a special type of leadership is necessary to make that happen, writes Nigel Williams of McKinsey & Co. ____ 9

CORPORATE FINANCE

The Federal Reserve Board wants banks to file regular reports that would help it gauge the volume of commercial loan stripping. ____ 3

Asset-based lenders are starting to thrive on the leveraged buyout boom of the 1980s — by moving in on deals gone bad, says one industry veteran. 6

Security Pacific National Bank is selling Security Pacific Acceptance, its field warehouse operation, to the unit's manager. ____ 6

A venture capitalist and former banker says there are plenty of opportunities for his current and former colleagues to engage in some mutually beneficial teamwork. ____ 8

Worth Repeating

Basically, we're a high-class pawnshop. We go after the tough deals — smokestack companies, auto parts, timber companies — when these industries are going belly-up. Everybody has a niche, I guess.

Gerald Blum, president of Fidelcor Business Credit Corp. [Page 6]

Random Thoughts

By SANFORD ROSE

It has always been a source of amazement to this writer that banks generally give multiple answers when asked to describe their interest-rate-risk position. They may say that they are liability sensitive (liabilities repriced before assets) in the short run, asset sensitive (assets repriced before liabilities) in the medium term, and balanced in the long term. This type of formulation, distressingly common in convention talks, makes precious little sense.

Every institution has one interest rate position. All gaps are not created equal. A liability-sensitive gap in the short bank may be more or less important than an asset-sensitive gap in the long bank.

These various gaps must be blended into one position by measuring the time-weighted present value of the projected asset cash inflows relative to a similar calculation for the projected liability cash outflows. This reveals the duration (true average life) of the asset and liability accounts.

Knowing the duration of these accounts and their respective dollar

Wriston Protege Looks Back

By DAVID NEUSTADT

NEW YORK — The old adage says: Be smart — and if you can't be smart, be lucky. Donald Howard, Citicorp's first chief financial officer, has been both.

"People don't properly appreciate the importance of luck, just plain luck, in a career," says Mr. Howard, who retired in January after 31 years at Citicorp and its predecessor, First National City Bank. The 60-year-old executive was named CFO of Salomon Inc. this month.

In 1958, as a trainee in First National City Bank's London office, he was picked to study the Eurodollar market that was then just developing.

"Once I got the people who were really doing the transactions, it wasn't difficult to understand," he recalls. From the time he wrote a page-and-a-half memo in 1958 until he left he was the bank's expert on the Eurodollar market.

"The market took off in the late 1960s and I rode that crest," he says. My career is as attached to the development of the Eurodollar market as it is to any other single factor, and that's just plain dumb luck."

He was also smart — enough so that he caught the attention of George Moore and Walter Wriston, two future chairmen of the bank.

As a research associate at Harvard Business School in 1957, it was Mr. Howard's job to entertain bankers who came to the campus to recruit. That year Citibank's recruiting was "disastrous," he says.

The following summer, while Mr.

Trust Assets Rose 10% in '87 Despite Crash

By BART FRAUST

NEW YORK — The value of stocks, bonds, and other assets managed for others by the 100 largest bank trust departments advanced 10.1% last year, according to the *American Banker*'s 20th annual trust banking survey.

The gain came in the face of declines in the stock and bond markets last year that culminated in the Oct. 19 crash.

Bankers and analysts attributed the asset gain in a down market to several factors, including substantial increases in new business, diversification of investments, required additions to bank trust funds by large pension managers, the effects of mergers, and a stock market recovery late last year.

"We found that assets were going to trust departments for the conservative, safe management for which they're known," said Gail Triner, manager of TrustCompare, an annual study of trust

values enables us to calculate the duration of the equity. Since it represents a claim on the difference between the asset and liability cash flows, equity is in reality a net bond. When we know its duration, we can, as with any bond, measure the changes in its value — the value of the bank — for a given change in interest rates.

Unfortunately, banks are often unconcerned with the impact of rate movements on valuation. Indeed, asset-liability management at all too many banks is defined as the controlled mismatching of maturities in order to maximize net interest earnings, subject to reasonable business risk, in the next accounting period or, at the most, over the next fiscal year.

This is far too narrow a definition. Good managers should want to track the effects of mismatch positions on bank value, which is nothing more than the discounted present value of all future net-interest-earnings outcomes.

If a bank is liability sensitive in the so-called short run, its net interest earnings should improve if rates decline. But if the overall duration of bank assets is measurably less than that of the liabilities, resulting in an asset-sensitive position, a decline in rates will lower the bank's value.

This comes about because, given the bank's duration gap, its liabilities are more price sensitive than its assets. If rates fall, the value of both assets and liabilities will increase. But the value of the latter, in view of their longer duration, will increase by more than the value of the former, squeezing the worth of the equity.

Otherwise put, a bank with an asset-sensitive or negative duration gap has, in effect, sold its equity short. Being a short seller, it benefits from a fall in bond prices (a rise in rates). But it loses when bond prices move up (a decline in rates).

The extent of the gain or loss depends on the duration of the equity bond and the amount of the rate change. Changes in the valuation of the equity account can be approximated by multiplying the negative of its duration by the change in rates. If rates fall by 1% and the duration of the equity is minus 10 years, then the value of the bank will fall by around 10%.

This drop in the economic value of the equity account foreshadows a decline in the bank's reported net interest earnings in future accounting periods. Indeed, the drop in equity values when rates fall merely reflects the fact that the bank is now obligated to pay its depositors and creditors the higher, preexisting rate of interest for a longer period of time than it is enabled to earn that same favorable yield from its borrowing customers. So, assuming no further changes in rates, net interest earnings must eventually suffer.

Focusing on the impact of rate changes on short-term profits or net interest earnings without simultaneously considering their effect on valuation and therefore on longer-run interest profits can hardly be described as acceptable management. Thus well-run banks must understand and implement duration analysis, described as the "theoretically correct but fiercely disliked approach to the monitoring of interest rate risk."

Duration is not, of course, universally disliked. Specialists report that they can have an entirely pleasant conversation about the concept with executives of insurance companies and finance companies. They can even have a tolerably agreeable exchange with thrift managers. But they can't talk duration with the senior officials of many banks. These gentlemen execrate the concept. To them duration is very nearly a dirty word.

□ □ □

Dan Brumbaugh's much-quoted and entirely praiseworthy volume, "Thrifts Under Siege," includes a felicitously phrased attack on regulatory restriction of particular asset categories. Deploring the Federal Home Loan Bank Board's efforts to circumscribe thrift direct investments, Mr. Brumbaugh notes that risk for a depository institution is not a function of a given asset type but rather of the behavior of all assets taken together.

Suppose that a thrift has one asset — a mortgage whose value falls when interest rates rise. And suppose, further, that it can make a direct investment in a somewhat risky firm whose fortunes nevertheless stand to improve when rates rise.

A portfolio of both assets, the author emphasizes, can be less risky than a portfolio of mortgages alone because the increased value of one can offset the decreased value of the other when rates change. In other words, because the two assets exhibit negative covariance — their values change in opposite directions when rates rise — supplementing an investment in mortgages that is relatively safe in terms of default with a direct investment that by itself is less safe (more default prone) can prove risk-reducing rather than risk-enhancing.

Mr. Brumbaugh points out that the direct investments in the portfolios of well-capitalized thrifts have not in fact posed a threat to the insurance fund, the FSLIC. And although the direct investments of poorly capitalized thrifts may have been made pursuant to a high-risk strategy, the problem lies not in the asset category, but in the tendency of insolvent or troubled institutions to "go for broke."

That tendency cannot be curbed by restricting particular types of portfolio choice. Given the wide range of assets in which thrifts can invest, troubled associations can always find a way of immolating themselves, thus compromising the insurance fund.

□ □ □

Mr. Brumbaugh's commonsensical observations suggest some obvious questions. If risk depends on the covariance of assets, what possible validity can there be to a risk-based capital standard that takes no account of the mix of an institution's commercial loan portfolio? Under current regulatory proposals, for example, every bank must backstop its loans to commercial customers with the full 4% common equity support, regardless of whether the business fortunes of these customers covary strongly, weakly, or even negatively.

What's more, if risk depends on covariance, why do banks and thrifts attempt to assess the riskiness of loans almost exclusively through analysis of individual-borrower balance sheets? Why don't they instead make more formal attempts to measure the economic linkages among their borrowers, charging higher risk premiums to new customers whose returns tend to be closely correlated with those of their existing borrower base and lower premiums to new borrowers whose returns are poorly correlated?

Suppose that a bank or thrift lends to 50 different customers, and each loan has an expected probability of default of 10 basis points. If the fortunes of the 50 borrowers are 40% linked or correlated, then the standard deviation of losses — the extent by which actual losses can diverge from the expected value of 10 basis points — amounts to 69 basis points. This says that loan losses for such a group of borrowers are likely to range between zero and a high of 79 basis points two-thirds of the time.

However, if the institution lends to a group of borrowers with the same average loss expectation but less interdependence — e.g., their coefficient of correlation is 30%, not 40% — then the standard deviation of losses, a proxy for true risk, declines from 69 to 50 basis points — meaning that losses are likely to range between zero and a high of only 60 basis points.

As the degree of interdependence among a given population of borrowers drops, so also does the risk to the lending institution. So, other things being equal, an institution that lends to a more independent group of customers needs less capital per dollar of assets than one that serves a clientele whose destinies are more closely intertwined. Yet neither the regulators nor the lending institutions themselves seem to pay very much attention to this vital question of customer or asset covariances. ■

Banking in Trouble: What Hurts? What Helps?

The following address was delivered June 20 by Robert L. Clarke, comptroller of the currency, before the American Bankers Association's Stonier School of Banking, Newark, Del.

□

SEVERAL years ago, the American existentialist philosopher Woody Allen began a graduation speech in this way: "More than any other time in history, mankind faces a crossroads. One path leads to despair and utter hopelessness. The other, to total extinction. Let us pray we have the wisdom to choose correctly."

Allen wasn't talking to the Stonier School of Banking. But if he had been, he would merely have been echoing widely held sentiments about the banking industry.

Throughout the 1980s, the number of troubled banks and the number of bank failures have risen dramatically. In the Midwest and the Southwest especially, depressed conditions in agriculture, energy, and real estate have pummeled banks like tempests battering ships at sea.

Hundreds of banks have foundered. Hundreds more have barely weathered the storm. Yet, others have righted themselves. And thousands in America's heartland have sailed through the storms practically unharmed as a matter of course.

Over the past year, the Office of the Comptroller of the Currency undertook a detailed study to gain a better understanding of why the performance of banks diverged so dramatically when they were faced with similar declines in their economic environments over the past decade.

We looked at three groups of banks: those that failed, similarly situated banks that experienced problems but were restored to health, and banks whose condition never deteriorated despite the problems in their local economies.

	TOTALS FOR THE TOP 100 FIRMS‡	**1,113,999,579,754**	**1,011,991,137,016**	**+10.1%**			

Data Source: American Banker survey questionnaire to the 200 largest trust firms in the nation. **Discretionary assets:** assets of accounts over which a firm is authorized to make investment decisions. Also included are assets in accounts for which the firm recommends, but does not make, investments. Assets of accounts where the firm shares investment power are also included. **Type of institution**— A footnote, appearing after the name of each firm, describes its type: **(B)**— Commercial bank; **(M)**— Multibank holding company; **(O)**— One-bank holding company; **(T)**— Nondeposit trust. **(a)**— PNC acquired Central Bancorp. Inc., Cincinnati, on 2/29/88. However, the trust functions of Central Bancorp were merged with those of PNC before yearend 1987. Therefore, the 1987 data for PNC include the trust assets of Central Bancorp. **(b)**— On 1/1/88, Fleet Financial Group, Providence, and Norstar Bancorp., Albany, N.Y., merged to form Fleet/Norstar. The 1987 data are for Fleet/Norstar, and the 1986 data are for Fleet Financial Group. **(c)**— On 2/29/88, Hartford National Corp acquired Shawmut Corp. and changed its title to Shawmut National Corp. Had the merger taken place before yearend, Shawmut National would have ranked 37th in discretionary assets with $9.8 billion. **(d)**— On 2/29/88, First Fidelity Bancorp acquired Fidelcor, Inc. Had the merger taken place before yearend, First Fidelity would have ranked 34th in discretionary assets with $10.2 billion. **(r)**— Data were revised since publication on 6/30/87. Rank firm would have had, if the revised data were used. **(†)**— Asset rank of the holding company as of 12/31/87. **(‡)**— The 1986 data are for the top 100 firms that year. **N.A.**— Not available.

Data Source: American Banker survey questionnaire to the 200 largest trust firms in the nation. **Number of subsidiaries engaged in trust activity:** *American Banker* asked respondents to indicate the number of commercial bank subsidiaries, nondeposit trust companies, affiliated investment advisor subsidiaries, and all other subsidiaries engaged in trust activities in 1987. The number shown is the sum of all these subsidiaries. **Affiliated Investment Advisor Subsidiaries:** This column indicates whether or not the firm has an affiliated investment advisor subsidiary or subsidiaries. "Yes" indicates the firm has such a subsidiary and "No" indicates it does not. **N.A.**— If a firm did not respond to the *American Banker* questionnaire, it was sent a mailgram. The mailgram did not ask for the number of subsidiaries engaged in trust activities. Thus, for these firms, the data are not available. **(†)**— Includes 32 international subsidiaries and five domestic subsidiaries.

Trust Units Posted Gains Despite Stock Market Debacle

➻ Continued from Page 1

department profitability produced by Cates Consulting Analysts Inc.

The *American Banker* survey also found that income from all types of bank trust activities rose 20.8% in 1987 for the 100 largest units, a result of substantial price increases.

In addition, the survey showed that Citicorp had supplanted J.P. Morgan & Co. as the nation's top producer of trust income. Morgan had led in this category in each of the previous 19 years. It finished second in 1987.

Although managed trust assets rose 10.1%, the market decline did make an impact. The percentage gain is the smallest since the 6.8% rise in 1984. In 1985 and 1986, in the heat of the bull market, the value of these holdings advanced a record 23% and 22.8%, respectively.

Managed, or discretionary, trust assets are stocks, bonds, and other holdings for which a trust banking company is authorized to make investment decisions. Also included are assets for which the trust banking company recommends but does not make the investments, and accounts over which the bank shares investment power.

Since trust departments invest heavily in stocks and bonds, increases or decreases are reflected in the value of discretionary assets.

From December 1986 to December 1987, stock prices fell 3.1%, as measured by the Standard & Poor's 500 index. Bond prices also plummeted during the period, with the Shearson-Lehman Treasury index falling 11.2%.

While lagging behind Citicorp in trust income last year, Morgan held on to the No. 1 spot in total managed trust assets. Morgan's discretionary assets totaled $65.4 billion, up 6% from 1986. Filling out the top five were Bankers Trust New York Corp., with $64.6 billion in trust assets; Wells Fargo & Co., with $53.9 billion; Mellon Bank Corp., with $53.5 billion; and Citicorp, with $51.8 billion.

Citicorp's ranking has been falling steadily over the past few years. In 1985, the nation's largest banking company was also the biggest trust bank. However, in 1986 it dropped to third place and last year fell to fifth.

A Citicorp trust officer said the decline in managed assets is part of a strategy to exit what he described as a thin-margin business. Instead, the corporation is emphasizing worldwide trust businesses in which it does not directly manage funds, for example, record-keeping services.

"There are some places in the world — Spain, Italy, part of the Far East — where a bank can charge 2% or 3% for handling a custody account," he said. "In the U.S., the whole deal is done for 15, 20 basis points."

And Citicorp's portfolio of managed trust assets continues to get smaller. The corporation has agreed to sell its domestic institutional investment management unit and its $18 billion portfolio to USF&G Corp., a Baltimore-based insurance holding company.

The strategy has propelled Citicorp to the top of the trust income rankings. Last year, Citicorp earned $513 million, up 34.6% from 1986. Second-place Morgan earned $443 million, up 11.2%.

Income at the 100 largest totaled $7 billion last year, compared with $5.8 billion in 1986.

Ms. Triner, the Cates analyst, attributed the higher income largely to substantial, across-the-board price increases for trust services.

The analyst also found that the profitability of trust departments rose slightly last year. She said that of the 120 trust departments included in the TrustCompare survey, the profit margin on average rose to 31% from 30%. "It undoubtedly would have been higher if not for Oct. 19," she said.

In the *American Banker* survey, MNC Financial Inc., Baltimore, showed the biggest percentage increase in trust income. MNC's earnings more than tripled to $37 million from $11.9 million.

Walter Fatzinger, executive vice president of American Security Bank, MNC's Washington-based bank unit, attributed the sharp increase to effects of MNC's acquisition last year of American Security and to a one-time boost to earnings from a change in accounting procedures mandated by the Tax Reform Act of 1986.

BankAmerica had the biggest percentage drop in trust income, which fell 23% after the company sold its consumer trust division to Wells Fargo & Co. ■

Merrill Beats Out Commercial Banks On Banc One's $1 Billion Paper Issue

By GEORGE YACIK

NEW YORK — Banc One Corp. expects soon to complete a program of $1 billion in private commercial paper backed by its credit card receivables.

Details on the huge transaction are sketchy, but market sources said the holding company based in Columbus, Ohio, will sell the receivables to a newly created trust, which will issue the paper. Merrill Lynch & Co. is investment banker on the deal.

"We do have a deal," a Banc One official said, but he would not comment further. The official said the company would have more to say about it "in a couple of weeks."

Sources said Merrill has been working on the deal for several months. The paper will be sold privately to a limited number of accredited institutional investors, sources said.

Officials at competing investment firms expressed disappointment they did not land the big Banc One account.

"Commercial banks couldn't bid on this" until the Supreme Court's recent decision granting banks new underwriting powers, an official at a large bank said. "This is exactly the kind of third-party transaction commercial banks would love to do and are well-placed to do," he said.

Market sources said Banc One was one of the earliest and most aggressive proponents of securitization, completing several deals in the private market. ■

Wriston . . .

➻ Continued from Page 2

"There's an awful lot that's no longer exciting in the job because I have done that over and over again." He says he has had the same basic responsibilities at Citicorp for 15 years.

One investment banker says there has been a high burnout rate among the bank CFOs of Mr. Howard's generation. No one at a major bank holding company, the banker says, has lasted as long as Mr. Howard.

Mr. Howard won't be able to take it easy at Salomon. The investment bank is beset with a variety of troubles and unsure of its direction. He will be Salomon's second chief financial officer. The first, Gerald Rosenfeld, lasted only one year.

Mr. Howard's main contribution to Citicorp? "The people," he says. "I have hired, developed, trained, and leave behind a legacy of people that is far and away my largest contribution to the corporation." ■

Thrift Power Base Growing, Pitt Says

By LINDA ELLIS

NEW YORK — The political power base of the thrift lobby in Washington has grown beyond savings and loan associations to include mortgage bankers, Realtors, and other groups involved in housing, the chairman of the nation's largest thrift trade group said Monday.

While the number of savings institutions — and thus membership in the U.S. League of Savings Institutions — is shrinking, there is still a powerful voice for the industry in Washington, Theo H. Pitt Jr., chairman of the U.S. League, told the New York Society of Security Analysts.

"If not us, who? Who will step in and provide the means to the American dream, home ownership?" Mr. Pitt said in response to a question about the viability of the troubled thrift industry.

Last year, savings institutions accounted for more than 54% of the residential mortgage loans outstanding in the private sector, he said.

Mr. Pitt, who is chairman and president of Pioneer Savings Bank, Rocky Mount, N.C., said an analysis of recent earnings reports "shows the bulk of the business to be healthy and vibrant."

Like the first-quarter 1988 earnings report, he said, 1987 losses were "confined to a relatively small number of institutions located primarily in economically depressed parts of the country."

Mr. Pitt said the reports showed that in the first quarter, for example, 20 institutions, mainly in Texas, accounted for $3 billion of the $3.8 billion industry loss, and 50 institutions accounted for $3.7 billion of the loss.

At the end of 1987, he said, citing the reports, 89% of the healthy institutions were profitable, with after-tax earnings of $4.9 billion. ■

Affinity Programs Target Deposits

By DONALD SHOULTZ

NEW YORK — The use of affinity programs to sell deposit products may become the next financial services marketing bandwagon. And at least two institutions have already climbed on.

Indiana National Bank will launch a nationwide affinity deposit program on Friday in conjunction with the American Legion. The Indianapolis-based bank plans to pitch a special money market deposit account to the Legion's nearly three million members.

"Certainly, a program of this magnitude has tremendous strategic potential for Indiana National Bank," said bank president Andrew Paine Jr. in a statement announcing the account.

AN AMERICAN BANKER WEEKLY FEATURE

Section Begins on Page 6

The Indiana National announcement came on the heels of the introduction by Bloomfield Savings and Loan Association, Birmingham, Mich., of the Share in Life certificate — a certificate of deposit targeted to members of religious organizations. When the CD matures, the thrift promises to pay a "goodwill contribution" to the customer's religious group.

"I think we are going to see a great deal of experimentation in the area in the next year or so," said Edward Furash, president of Furash & Co., the Washington-based consultancy.

"Everyone has been very impressed with the way credit card affinity marketing was so successful," he added. "As a result, I think there is a wide range of experimentation all over the country trying to figure out how to make the same trick work on a new dog."

Affinity group marketing involves tailoring a product with features that will interest consumers who share a common interest. Successful affinity credit card programs, which usually feature lower interest rates and reduced annual fees, have been aimed

FSLIC Infusion on Slower Track

Timetable Extended for Floating $10.8 Billion in Bonds

By JIM McTAGUE
Washington Bureau

WASHINGTON — Thrift regulators plan to take eight years to raise $10.8 billion on the bond market to recapitalize the insolvent Federal Savings and Loan Insurance Corp.

The news came as a surprise to many in the industry and on Wall Street, where it had generally been anticipated that the last of the bonds would be issued by late 1990. One analyst said the Federal Home Loan Bank Board, the top thrift regulatory agency, was gambling that interest rates would drop.

Last August, Congress authorized the Bank Board to raise the money in no less than three years. The Bank Board chartered the Financing Corp., more commonly known as FICO, to issue bonds. Since September, FICO has gone to the market six times and raised $2.9 billion at an average yield of 9.96%.

Bank Board Chairman M. Danny Wall said the slower pace of bond issuance will save the industry money.

"Yes, we are slowing the rate of FICO borrowing," Mr. Wall said Wednesday. He said FSLIC would continue to use notes, rather than cash, to finance the disposition of troubled S&Ls because "then we don't have to spend 10% interest borrowing from FICO."

Mr. Wall said the notes, which are

Revision Hinted In Capital Plan

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Federal bank regulators may capitulate to industry demands on at least one risk-based capital proposal and allow banks to support mortgage lending with half the capital that would be required for other types of loans.

Federal Reserve Board Governor H. Robert Heller said on Wednesday that regulators may be ready to back off their long-standing position that by giving mortgage lending preferential treatment over other types of lending, the government is allocating credit.

Mr. Heller also repeated the Fed's long-held position that the new capital standards should apply to both banks and their holding companies. Bank

Salomon Model Forecasts Value Of LDC Debt

By BART FRAUST

NEW YORK — Salomon Brothers Inc. unveiled an econometric forecasting model on Wednesday that the company expects to facilitate secondary-market trading of Third World debt.

The model is intended to help banks and other investors exchange the debt of one developing country for another's.

"Our analytic goal is to create a systematic method for identifying trading opportunities in the cross-border swap market," said John F.H. Purcell and Diego J. Orlanski, corporate bond researchers for Salomon, in a new report.

But some of Salomon's competitors in this market had their doubts about the usefulness of the model. "It's preposterous," said one rival at a New York investment banking firm. "How do you value the asset when you have no idea of what's going to happen to the economy or political conditions or the country's ability to repay?"

The Salomon researchers found that implementing buy/sell transactions derived from the model in the first, second, and third quarters of 1987 would have produced net profits of 27%, 53%, and 28% if held by an investor until the end of first-quarter 1988.

A $15 billion secondary market has developed in the estimated $1 trillion in loans that banks have made to Third World nations. Banks and other investors buy and sell the loans to exchange for equity positions in companies in the debtor countries. They also trade the loans for investment purposes as an investor would buy or sell securities.

Kenneth L. Telljohann of Salomon's international loan trading desk said the new model is intended to help banks make judgments about the values of different Third World credits, before trading the loans for investment purposes.

Rescheduling Record Considered

The model comprises five economic variables that, according to Salomon, can predict the likely change in a debtor country's secondary-market price.

Besides looking at the country's per capita income and ratio of external debt to exports, Salomon's model also assigns relative values to the nation's record of rescheduling debt, its ability to service loans, and the availability of debt-for-equity conversions there.

The model penalizes countries that have rescheduled their bank debt during the past five years, if they have failed to make interest payments at any point during the five years, or if no debt-for-equity programs exist there. Many countries, resisting foreign ownership of their companies, severely restrict debt-for-equity swaps. Secondary market prices are higher where these programs exist.

The Salomon researchers conceded that their model cannot anticipate all the uncertainties and nuances surrounding Third World debt. They said that to increase the power of the model, they established "confidence levels" around the predicted price of a debtor country. For example, Brazil's confidence level is between 27.48% and 55.11% of the par value of its outstanding loans. If a country's debt trades within the upper and lower bounds of this confidence level, there is a 95% probability that the issue is fairly priced, they said.

A strategy of buying credits indicated by the model as underpriced and selling those that are overpriced will generate positive returns for investors, Salomon said. ■

Loan Pricing Stabilizes, Survey Shows

By DAVID NEUSTADT

NEW YORK — Loan pricing for small companies has stabilized, a survey shows, but at levels that continue to ignore borrowers' creditworthiness.

Those findings were among the preliminary conclusions of a survey of 15,888 companies with sales between $5 million and $50 million, released today by Greenwich Associates, a market research firm in Greenwich, Conn. A final report and analysis of the survey is due in two weeks.

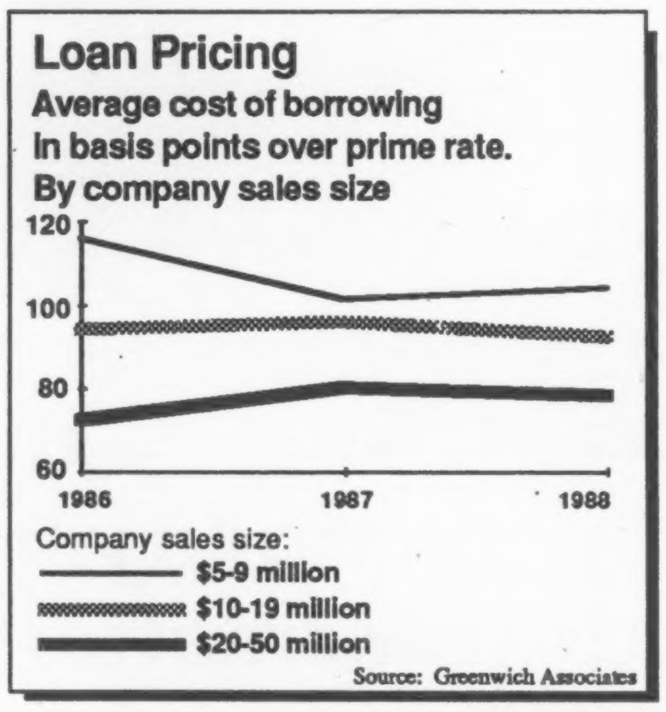
The average cost of a loan for all the companies in the group was 94 basis points over the prime rate in 1988, the same as in 1987 for a smaller sample of companies. In 1986, loans were made at an average of 99 basis points over prime.

But the averages mask an important trend, a flattening of the difference in prices between the smaller and larger companies within the whole group.

Greenwich divides the sample into three subgroups: companies with sales of $5 million to $9 million; those with $10 million to $19 million; and those with $20 million to $50 million. Generally, the bigger companies pay a lower rate then the smaller ones, reflecting the stronger credit standing of the bigger companies.

But between 1986 and 1987, the difference in credit cost between the bigger companies and the smaller companies dropped more than half, to 21 basis points from 44 basis points. In 1988, it remained little changed at 26 basis points.

"The fact is that there is not a lot of difference in rate for a substantial difference in credit quality between a $5 million company and a $45 million company," said Peter Garrison, a Greenwich partner.



Source: Greenwich Associates

"There is continued aggressive pricing in the marketplace," Mr. Garrison said. Since price is one of the easiest factors to change when faced with tough competition, one bank will usually decide to be aggressive on price, he said. That forces other banks either to compete on price or risk losing relationships. Most choose to compete on price.

"That leaves them with a strategic dilemma, how to increase the profitability of the relationship when one element is under price pressure," Mr. Garrison said. "The natural conclusion leads to better cross-selling to existing relationships. However, not all banks are equal in their success in that task."

There is some hope for banks that choose to resist the price pressure, in another of Greenwich's findings. In the list of factors that would make them leave a bank, companies listed high prices fifth, behind the condition of the bank itself, inefficient operations, and two responses about getting loans that meet their needs.

However, low fees and interest rates were second in the list of criteria used in selecting a new bank. That suggests that price is important in establishing a new relationship, but not as important once the relationship is established.

The top criterion in picking a bank was the institution's personal attention to the company's needs, the survey showed. Since many banks have similar products and policies, "the bank account officer is the important ingredient that breaks the tie," Mr. Garrison said. That is why banks are spending more time and money training account officers, he said.

After personal attention and price, the next three criteria revolve around lending. That reflects the fact that most of these companies are borrowers.

The average company in the group borrows $1.1 million a year. That ranges from average borrowings of $2.43 million for companies with revenues of $20 million to $50 million to borrowings of $528,000 for companies with revenues of $5 million to $9 million.

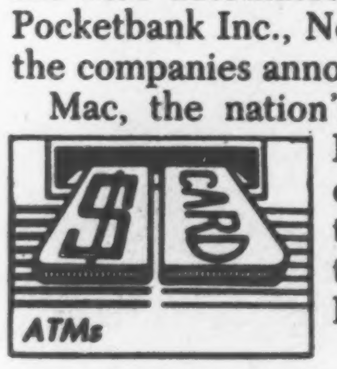
The bigger companies maintain short-term investments of $1.93 million and cash balances of $1.33 million. The smaller companies had short-term investments of $487,000 and cash balances of $374,000.

There is one bit of potentially good news in the latest survey. About 18% of the companies use one or more nonbank financial institutions, down from 25% in 1987. However, the difference may not mean that banks are getting less competition. Instead, it could reflect the fact that the two surveys were conducted in different areas of the country. ■

CoreStates Buys New Hampshire ATM Network

By YVETTE D. KANTROW

NEW YORK — CoreStates Financial Corp., operator of the Mac automated teller machine network, will acquire Pocketbank Inc., New Hampshire's leading ATM network, the companies announced on Wednesday.



Mac, the nation's third largest regional network, and Pocketbank will consolidate in 1989 under the agreement. For Mac, the acquisition represents its first expansion out of the Middle Atlantic region into New England.

The seven owners of Pocketbank — Amoskeag Bank, BankEast Corp., Bank of New Hampshire Corp., First NH Banks Inc., Indian Head Banks Inc., New Hampshire Savings Bank, and Numerica Financial Savings Bank FSB — will become members of the combined network.

All other Pocketbank participating financial institutions will be encouraged to join Mac by Nov. 1. Technical conversion will not begin before midyear 1989. Purchase price was not disclosed.

The Pocketbank network has 68 participating financial institutions, operating 327 ATMs. It consists of 300,000 Pocketbank cardholders who perform one million transactions per month.

"We have felt for some time that Pocketbank eventually would have to become part of a larger operation," said Philip M. Stone, executive director of the network. As part of Mac, Mr. Stone expects Pocketbank members to benefit from CoreStates' investments in electronic home banking and small business banking, as well as retail point-of-sale capabilities.

Bonnie E. Hill, a senior vice president of Philadelphia-based CoreStates and manager of Mac, said few changes would be made in Pocketbank and its present management will be retained.

Mac is the nation's largest regional ATM network in terms of interchange transactions, those that flow between banks through a central switch. It has 538 participating financial institutions. The network has 4,566 ATMs in Delaware, Maryland, New Jersey, New York, Pennsylvania, and West Virginia. Approximately 11 million cardholders use ATMs bearing the Mac logo 24 million times a month.

The largest network is the New York Cash Exchange with about 6,000 ATMs, followed by Star System Inc. with about 5,000. The Mac network, which derives its name from Money Access Service, earned its status as the nation's third largest network earlier this year, when it merged with Pittsburgh-based CashStream, Mellon Bank's 194-member regional network.

The deal was characterized as a consolidation rather than an acquisition. Mellon and its eight subsidiary banks officially became Mac members and agreed to endorse and promote Mac membership to the rest of CashStream. ■

Let a Skilled Marketer Tell Your Earnings Story

By N.W. "RED" POPE

WHEN times are good for our banks, one of the true thrills is writing and releasing the quarterly earnings. We can't wait until the business section includes our financial successes. We hope for bold headlines.

But when times are not so good — as has been the case in recent quarters for many banks, due to lesser-developed-country debt, real estate, energy, agriculture, and assorted lending difficulties — that necessary news release does not present a happy opportunity. It is one of the few times when the PR person at the bank truly hopes the story will be buried in the paper or lost altogether.

However, right is right; so the numbers must be released, with appropriate editorial comment, as those quarters roll around inexorably. How they are released, how the material is put together in prose form, and what management statements are offered, is where the marketing professional earns his or her keep. This is where the bank can make the most of a difficult situation, or at least ease the pain.

It doesn't take a great writer or adroit publicity to make good numbers glow. Nor should it require a great writer to do something positive with poor numbers, either. But it does require some thinking, and the touch of a professional marketer.

Too often, when the numbers are poor, the press material is prepared razor thin by the finance people. Barebones information is provided. No extraneous or even legitimate support is given, nor are any positives provided. "Just the facts, ma'am," as it were.

The result is a dull but legal litany of numbers. Save for a few analysts who actually enjoy such arithmetical boredom, such a release does no favors for anyone. On the other hand, this approach usually indicates the bank is anxious to get the pain over with. It makes no excuses and sees no silver lining.

Good and Bad Examples

For example, read the following mythical introductory paragraph, written by the number crunchers:

"The First National Bank reports earnings of $250,000 for the first quarter of 1988, or 25 cents per share, a decline of 11% over first-quarter 1987."

Obviously, the bank's earnings are down and that must be reported. But how dull and deadly must the release be?

Compare that opening shot with this one:

"The First National Bank, largest financial institution in Hooray County with 17 branches and $1 billion in assets, announced earnings of $250,000 for the first quarter of 1988, or 25 cents per share."

Following quickly is a positive statement from the CEO:

"These results give our bank a positive start for the year, compared with yearend results for 1987," said Charles Jones, chairman. "A number of loan-related factors that had a negative effect on our performance last year are now behind us, we believe, due to the aggressive actions we have taken. Positive benefits over the balance of 1988 and into the future should occur on the strength of management's actions."

Obviously, the chairman's statement, using words like "strength" and "aggressive" and "positive" — and the tone of his sentences — indicates that the past year was not up to par; but we are assured that management has taken steps to overcome adversity and get things moving upward. That's what the shareholders want to read, and the public finds such comments comforting.

Certainly, the forthcoming performance must show improvement. Otherwise, similar statements in future quarters may be met with some hostility, and the chairman's words could become suspect. At this juncture, however, it is in order to blend the down numbers with the up potential — if it is true.

Finding Grounds for Optimism

There is no question that all the information must be revealed; that occurs in ensuing paragraphs. Diligence is necessary as well as desired. But how things are said, in what context they're said, can make chicken salad out of plain chicken, or something like that.

Pope Says:

How things are said, in what context they're said, can make chicken salad out of plain chicken.

In candor, producing a release that is totally numbers is all that is absolutely required. Such releases tend to be short and, naturally, they get the job done.

But, I contend the bank deserves more, especially if management is getting a grip on the problems that caused the poor performance. Few individual and local shareholders of bank stock may want to sell out, preferring to stick it out and hope for the best. They are looking for good news.

The institutional types that are numbers-oriented, quarter-to-quarter driven, may have no interest in anything *but* numbers. They'll have their opportunity in the following paragraphs and the attached balance-sheet data. But to those who have a personal involvement, a real feeling of ownership, let them read more than bad statistics.

In essence, marketing people should produce the earnings releases, not the financial people within the bank. Both the legal and the numbers people must sign off on what is written for accuracy, completeness, and adherence to regulatory requirements. But the tone of the piece should be in the hands of those who see beyond statistics and who understand the power of communications.

There is nothing wrong with the chairman stating his disappointment with past results. Or focusing on the problem areas. Nor is there anything wrong with pointing out the strengths, the virtues, and the promising opportunities that are there as well.

Finance, do your job. Then, marketers, do yours. ■

Mr. Pope is senior vice president-marketing at the Valley National Bank of Arizona, Phoenix.

LETTERS TO THE EDITOR

Management Consultants Can Provide Perspective

To the Editor:

In a letter to the editor, printed June 2, page 5 ["Consultants Not Needed"], Mr. Straight of Higbee Associates faults Pacific Western Bancshares, San Jose, Calif., for retaining management consultants to review the profitability of its product lines. He continues that management should know its costs better than any consultant.

In today's highly competitive banking environment, many banks realize that a fresh and objective look by experienced and knowledgeable management consultants, whose specialty is to help banks identify opportunities to reduce expenses and increase revenues, is valuable.

All but the largest banks most often do not have support staff to aid the line executive to plan and cope with change as well as provide in-depth analysis to challenge current ways of doing business.

In this age of specialization, it behooves management to use all resources that are available.

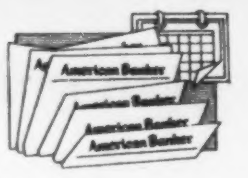
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- The Federal Reserve Board notified the Transamerica Corp. that the California banking giant faced charges that it was exercising a credit monopoly and was in violation of antitrust laws.

20 Years Ago

- The Federal Home Loan Bank Board joined the Federal Reserve Board, the Treasury, and the Federal Deposit Insurance Corp. in opposing a plan by Sen. William Proxmire, D-Wis., to force the Fed to take a more active role in supporting the mortgage market.

10 Years Ago

- Citibank, Midlantic National Bank, and United Jersey Bank were among several banks and retailers in the New York-New Jersey area that agreed to help the Federal Reserve Bank of New York and the U.S. Treasury increase the circulation of $2 bills in the district.
- Businesswomen applying for credit at commercial banks appeared to be victims of a "pattern of subtle discrimination," according to a White House survey of about 3,000 female entrepreneurs.
- Attorneys for the Bunny's Club filed a $10 million suit charging two top executives of United American Bank — chairman Jake F. Butcher and vice chairman Mark F. Vorder Bruegge — with conspiring to have the Memphis club's lease canceled. The owner of the building that housed the bank's headquarters and the club had earlier filed a complaint that noise from the club — which opened at 11 a.m. — created a disturbance, and that the topless dancers who worked in the club, and who shared a restroom with the bank's female customers and employees, were using the facilities while allegedly still in their working costumes.

5 Years Ago

- Citing $13.4 million in overdue loans, three banks and the Federal Deposit Insurance Corp. sued to put Knoxville, Tenn., banker C.H. Butcher Jr. into involuntary bankruptcy.
- Shareholders of the ailing Seafirst Corp., Seattle, approved the merger of their bank holding company with BankAmerica Corp., San Francisco, by a 79% majority.

1 Year Ago

- A House-Senate conference committee dealt the banking industry an unexpected setback by tightening a proposed moratorium on new powers to include curbs on the power of the Office of the Comptroller of the Currency to permit new bank activities. The committee also agreed to close the loophole allowing nonbank institutions to own limited-service banks, and to authorize an $8.5 billion rescue plan for the insolvent Federal Savings and Loan Insurance Corp.
- The Senate confirmed M. Danny Wall as chairman of the Federal Home Loan Bank Board.
- The Federal Home Loan Bank of New York sent two supervisory bulletins to its 276 member thrifts, calling for tighter controls on securities trading in the wake of significant losses.
- The Federal Reserve Board approved Citicorp's request for its Citicorp Savings unit to acquire 50 Sears Savings Bank branches in California.
- First RepublicBank Corp., Dallas, said it would make a special addition of $325 million to its reserve for loan losses in the second quarter, including $275 million against troubled international credits. The company forecast a loss of $313 million for the quarter but said it expected to make a profit in the second half of the year.
- Brazil suspended payment of principal on $1.05 billion in debt due to foreign export credit agencies.
- Revised government figures showed that S&Ls lost $400 million more in 1986 than had previously been reported. During the fourth quarter of the year, according to new numbers released by the Federal Home Loan Bank Board, the nation's thrifts lost $1.4 billion.

VOL. CLIII NO. 128 Friday, July 1, 1988

Today

One year after the deregulation of Canada's financial services industry, remaining barriers to foreigners are crumbling fast. But some analysts question to what extent outsiders plan to establish a presence there. 2

Electronic Data Systems Inc. completed its merger with MTech Corp. this week and has brought its ex-rival into a new strategic business unit. 2

Commonwealth Savings and Loan, Fort Lauderdale, Fla., expects a loss of more than $20 million as a result of unauthorized trading activities in a series of investment accounts. ____2

The Senate Banking Committee is considering a bill that would let banks satisfy proposed rules for cashing government checks by offering all-electronic accounts to low-income people. ____3

John P. LaWare's nomination to the Federal Reserve Board, once considered in trouble, now appears to be on the fast track. ____3

Executive Changes ____ 12
In the News ____3

COMMENT

Instead of preventing foreign firms from operating in the United States, we should copy the European model and become more outward-looking, writes Atlanta Fed President Robert P. Forrestal. ____4

THRIFTS & MORTGAGES

Anybody want to buy an Atlanta thrift? At least three are on the block at fairly reasonable prices, but likely buyers remain few and far between. 6

Dennis Jacobe, an economist for the U.S. League of Savings Institutions, has written in a league magazine that the FDIC is as decrepit as the FSLIC. FDIC Chairman L. William Seidman calls the story misleading. ____6

James Thelen, a top originator at ComFed Mortgage Co., has jumped to San Diego-based ICA Mortgage Corp. to lead a New England expansion. ____7

Despite the attractions of mortgage banking, thrifts that stick to traditional portfolio lending have performed better, writes Stuart Feldstein in the Thrift Observer. ____4

Worth Repeating

There is an abundance of data to show that as you go down the education and income ladder, people just don't use direct deposit.

Peggy Miller of the Consumer Federation of America, in opposition to a proposal that would allow banks to satisfy rules on cashing government checks by offering all-electronic accounts to low-income people. [Page 3]

Thrift CEO Pay Rose 13% in '87

By LINDA ELLIS

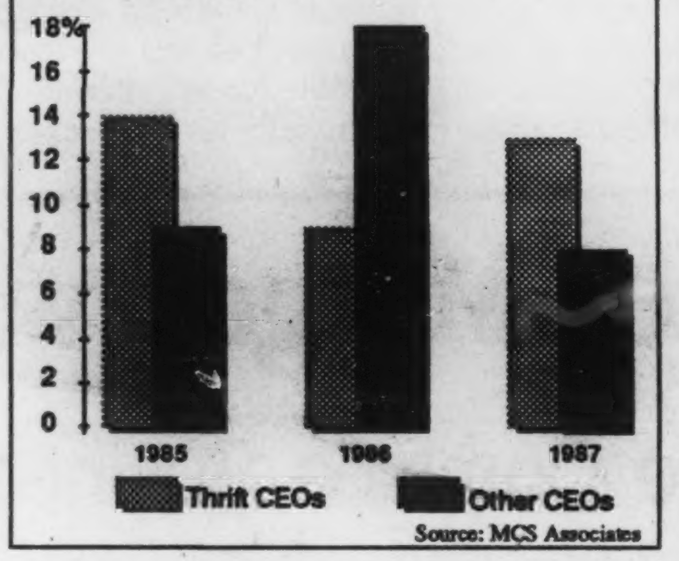
NEW YORK — Compensation increases for chief executive officers at the nation's publicly traded thrifts jumped 13% last year, outdistancing their counterparts in other industries by 5 percentage points and the consumer price index by 8.6 percentage points.

Section Begins on Page 6

That in a year when the thrift industry, including mutual institutions, lost $6.8 billion.

According to a study by MCS Associates Inc., Newport Beach, Calif., there is no clear-cut evidence that thrift executive pay is related to performance. Higher or lower levels of company performance apparently bear little relation to the compensation of senior executives.

How Thrift CEOs' Compensation Stacks Up



Source: MCS Associates

There is, however, a strong correlation between asset size and compensation; the bigger the thrift, the more it pays its top people. [A table listing the 100 highest paid executives at publicly

Mac ATM System Widens Lead; NYCE Now Ranks 2d in Volume

By JEFFREY KUTLER

NEW YORK — Mac, the automated teller machine network owned by Philadelphia National Bank, has widened its lead over other regional networks when ranked by interchange, or interbank, transaction volume.

Mac handled an average 7.9 million interchange transactions per month in 1987, double the volume of its two closest competitors, according to a survey conducted by the consulting firm of Speer & Associates.

The New York Cash Exchange, known as NYCE, and the Pulse network in Texas ranked second and third, respectively. Each had just under four million interchange transactions per month and grew faster in percentage terms than Mac. NYCE, on the strength of a 127% increase, jumped from ninth place to second, forcing Pulse to drop from second to third.

But Mac still managed to gain ground against its closest rivals, owing to its recent acquisition of the CashStream system from Mellon Bank, Pittsburgh.

Mac and CashStream — they actually merged in early 1988 but were treated as one in the Speer survey — were first and seventh, respectively, in Speer's 1986 ranking. Because of data-gathering complications, not all of CashStream's 1987 volume was count-

2 Plead Guilty To Defrauding Continental

Lytle, Patterson Face 5-Year Prison Sentences

By LISABETH WEINER
Midwest Bureau

CHICAGO — Two former bankers facing a retrial pleaded guilty Thursday to felony charges of defrauding Continental Illinois National Bank and Trust Company of Chicago. The charges involved loans to Penn Square Bank, whose 1982 collapse almost toppled Continental.

John Lytle, a former Continental Illinois loan officer, admitted to a single count of willfully misusing Continental Illinois funds. Former Penn Square executive William Patterson admitted to aiding Mr. Lytle.

In arranging the plea bargain, prosecutors agreed to drop 10 other charges of wire fraud and misapplication of bank funds. The two men were indicted on those charges in 1984.

A sentencing hearing was set for Aug. 30. Each faces up to five years in prison and a maximum fine of $5,000. Prosecutors have recommended prison terms for both of them.

"I have no comment except to say I feel we've come to an agreement fair to

Portfolio Lenders Still Outperform Mortgage Bankers

ONE of the great mortgage industry trends of modern times began in the mid-1980s. That's when a number of the biggest U.S. thrifts rushed headlong into the mortgage-banking business. So far, it hasn't paid off.

Thrifts were drawn to mortgage banking by the seemingly very profitable spreads they could earn servicing loans for others. There was some logic behind the idea.

In the old days, thrifts were portfolio lenders. They held most or all of the loans they originated and then performed the servicing function (billing, collection, and customer service) on those loans. But by holding loans, portfolio lenders played a high-stakes game of interest rate risk.

As secondary markets for mortgages expanded, a number of thrifts moved to mortgage banking as a safer alternative. Some began selling almost all their loans, acquiring mortgage-banking firms and in general pegging their futures to servicing fees and loan-trading profits.

As it turns out, portfolio lending has been a better strategy so far. In both 1986 and 1987, the portfolio lenders were much more profitable than the thrift/mortgage bankers.

That conclusion comes from a new SMR Research Corp. study undertaken as part of our upcoming annual review of mortgage industry trends and competition. We examined profits, loan-portfolio composition, and loans serviced for others at the nation's 100 largest thrifts in assets.

We divided these big players into two groups. The first — thrifts with mortgage-banking strategies — had a greater volume of loans serviced for others than residential whole loans in portfolio. The second group included thrifts with bigger residential whole-loan portfolios than servicing portfolios. We used Federal Home Loan Bank Board data.

The thrift/mortgage bankers included 28 of the top 100 companies in 1986, and 25 of the top 100 in 1987. In 1986, the 28 earned a combined return on yearend assets of 0.25%. In the same year, the portfolio lenders were more than three times as profitable, earning 0.82% ROA. In 1987, the 25 thrift/mortgage bankers earned a combined return of negative 0.17%. Meanwhile, the portfolio lenders earned 0.29%

One glitch in the 1987 data involved American Savings and Loan Association, the huge but infamously troubled California thrift. This company has replaced many of its whole loans with purchased mortgage securities. Because the whole-loan portfolio was so small, American was counted with thrifts that had a mortgage-banking strategy. American lost $467.6 million in 1987.

But even when this company was removed from our group of thrift/mortgage bankers, the group still had a combined 1987 ROA of only 0.13% — less than half the level of the portfolio lenders.

We weren't surprised to see the portfolio lenders do better in 1986; they should do well in a declining interest rate environment. But, all other things being equal, the thrifts with a mortgage-banking strategy should have caught up in 1987. The gap did narrow, but the mortgage-banking thrifts never came close to matching the portfolio lenders' results.

We don't expect to see a change anytime soon in the performance of the thrift/mortgage bankers versus their portfolio-loving counterparts.'

— **Stuart Feldstein**
President
SMR Research Corp.

We don't expect to see a change anytime soon in the performance of the thrift/mortgage bankers versus their portfolio-loving counterparts. Recently, spreads on mortgage servicing have been growing thinner due to hard price competition.

At the same time, thrift loan portfolios are shifting fast toward adjustable rate mortgages. This will help the better portfolio lenders through a rising rate environment, even though ARMs have more credit risk than fixed-rate loans.

Thrifts that opted for the mortgage-banking strategy were not alone. In 1985 and 1986, a host of manufacturing and insurance companies ranging from General Motors to Metropolitan Life jumped into the mortgage-banking business. So did a number of commercial banks, whose mostly disappointing 1987 mortgage banking results were the subject of a different SMR study.

Times have been hard for most mortgage bankers. But the situation is mostly ironic among the thrifts. At the very time when casual observers view the traditional thrift industry as nearly sunk, the better thrifts happen to be those that stuck with the portfolio business and simply have run that business the right way. ■

Mr. Feldstein is president of SMR Research Corp., Budd Lake, N.J., a publishing and consulting firm specializing in strategy research on consumer financial services.

COMMENT

US Must Look Outward Instead of Raising Barriers

By ROBERT P. FORRESTAL

UNTIL RECENTLY, foreign investment in the United States was not an issue of interest or concern. Now, debates over the pros and cons of foreign ownership of U.S. assets are covered extensively in the national media.

Interest in this topic intensified as foreign investment in property, plant, and equipment — as well as foreign purchases of U.S. government securities and corporate stocks and bonds — accelerated sharply in the 1980s, and the United States emerged as the world's largest debtor, with some half trillion dollars owed to foreigners. As recently as 1981, the United States was the world's largest creditor nation, with $141 billion in net foreign assets.

While large federal budget and trade deficits in the 1980s resulted in a huge surge of foreign portfolio investment in U.S. Treasury securities, they also contributed to a substantial increase in foreign direct investment, which includes U.S. businesses acquired or established by foreign investors holding at least a 10% ownership interest. Since 1981 one-fourth of the change in the nation's net indebtedness has been in this type of investment.

The heightened presence of foreign ownership of U.S. financial and real assets, especially the establishment of manufacturing and service affiliates, has raised not just interest but also concerns about the long-run consequences of these investments. Some people worry that the accumulation of foreign debt occasioned by our large federal budget deficit will lower future U.S. living standards.

Others are more apprehensive about foreign direct investment, citing potential national security and foreign policy risks, the eventual outflow of profits to the country of origin, and wasted public resources associated with competition among state and local governments to recruit foreign firms.

Foreign Investment in US Still Small

While I share the concerns about our external financial obligations and their likely adverse impact on future generations, I am not alarmed by the rise in foreign direct investment. First, it is important to bear in mind that the scale of foreign direct investment in the United States is still quite small. In terms of jobs, for example, only 3% of the U.S. work force is employed by U.S. affiliates of foreign-owned firms.

Certainly, some risk to national security is posed when defense contracts are let partially to foreign-owned firms. Safeguards are already in place, however, to guard against abuses. For example, defense contracts cannot be awarded to firms that are more than 25% foreign-owned, and foreign investment in a few sensitive industries is prohibited. We must be careful in drawing these lines of protection around certain industries, though. If overdone, they could dull the competitive edge of U.S. businesses.

It is also true that profits are ultimately repatriated to the country of origin, but we still enjoy many benefits, especially at the regional level —higher employment, more diversified local economies, and expanded property and payroll tax bases. I admit that competition among state and local governments to lure foreign direct investment with tax abatements, free land, subsidized labor training, and other inducements can be wasteful and cause a cleavage between national and local interests. In many instances the foreign direct investment would have occurred anyway.

However, these criticisms apply to all types of investment, not just foreign. The fact that Americans are concerned about such practices when the source is foreign reflects the vestiges of our isolationist traditions. Compared to other advanced economies, we are still very inward-looking in many respects. The irony, some would say hypocrisy, is that U.S. firms were leaders in setting up operations in Europe in the 1950s and 1960s, and even earlier in Latin America. Businesses abroad responded to this challenge by putting even greater emphasis on international markets, and many are now beating us at our own game.

The best strategy on our part is not to keep foreigners from opening up operations here or from acquiring U.S. firms. Rather, we should copy the successful model of Europe — and, indeed, the most rapidly developing countries — and become more outward-looking so that we are not left behind as the world economy becomes increasingly integrated. ■

Mr. Forrestal is president of the Federal Reserve Bank of Atlanta.

Thrift Executives Were Well Rewarded in '87 Despite Losses

Continued from Page 1

held thrifts appears on page 11.]

At first blush it could appear that the relatively high compensation might be one reason the thrift industry is so troubled, but "that's not the case," said Jon Rosenbaum of MCS.

"The challenges of the industry require that, in order to attract and retain good managers, you need to provide very competitive compensation programs," Mr. Rosenbaum said. "A lot of thrifts are seeking senior management from other industries and for that they need to offer higher compensation."

Compensation includes salaries, incentives, bonuses, deferred compensation payments, and accruals. MCS gleaned data from proxy statements and annual reports from a sample of 343 institutions.

According to a compensation study done by SNL Securities Inc., at least five thrift executives earned more than $1 million in fiscal 1987. The survey by the Hoboken, N.J., firm, which involved 409 companies, included individual results. There are 432 publicly traded thrifts.

Only one of the five thrifts that paid their executive more than $1 million posted an increase in profits during the period. At that one, CalFed Inc., Los Angeles, the chairman's compensation climbed 16.5%, while the thrift's profits grew 5.6%.

Thomas Spiegel, chief executive officer of Columbia Savings, led the pack with compensation of $4.46 million, up 15.5% from the previous year. A colleague, David A. Sachs, senior vice president at the Beverly Hills thrift, finished fifth with $1.04 million, up 98.1%.

But from this year forward, Mr. Spiegel's compensation will be tied to the thrift's profitability and stock performance. A new package for the CEO has satisfied the Federal Home Loan Bank Board, which had questioned Mr. Spiegel's compensation.

Charles H. Keating Jr., chairman of American Continental Corp., parent of Lincoln Savings and Loan Association, Irvine, Calif., took second place at $1.95 million, up 10%, during a year when Lincoln's earnings fell 19.9%.

Mr. Keating's salary is not paid out of Lincoln's earnings, but out of the parent company's return, a spokesman said. American Continental has strong earnings from nonthrift activities, unlike many thrift holding companies.

Robert R. Dockson, chairman of CalFed, parent of California Federal Savings and Loan Association, placed third with $1.136 million in 1987 compensation.

At Great Western Financial Corp.'s

been written."

□

M. Danny Wall, chairman of the Federal Home Loan Bank Board, reproached us last week for an inaccuracy in this column describing his criticism of the press for inaccurate reporting. We said Mr. Wall no longer announces details of the sales of sick thrifts because the news reports have been "screwed up."

What Mr. Wall actually said was that people have told him he shouldn't release any additional details. The Bank Board continues to release the same basic information they have put out all along.

Mr. Wall was responding to a request from the Federal Savings and Loan Advisory Council for even greater disclosures about the transactions. The council thinks the information on past deals would encourage new ones.

Mr. Wall told us that Board member Roger Martin is the person who suggested releasing less information than is currently available.

Mr. Martin confirmed this. He said that some general circulation dailies, not the *American Banker*, are guilty of confusing the terms of those complex deals.

□

One Bank Board deal we'd like to see laid bare is the decision to let Lincoln Savings and Loan Association, Irvine, Calif., escape the regulatory clutches of the Federal Home Loan Bank of San Francisco. That decision, approved by a 3-to-2 vote of the Bank Board in May, is generally perceived as unwise because it set a worrisome precedent.

At a press conference on Wednesday, Mr. Wall told reporters that no other institutions have made similar applications to flee the grasp of their district examiners.

"No other institutions have undergone an examination that lasted three years [like Lincoln]," he said.

Why not remove the regulators instead of Lincoln? Mr. Wall declined to comment on the situation, citing his public trust to keep such deliberations confidential. But Congress, exercising its public trust of oversight, has requested transcripts of the 27 hours of interviews that led to the Bank Board's decision, and like it or not, the board will turn over its information.

Lincoln is owned by Charles Keating, an influential Republican fundraiser and chief executive officer of American Continental Corp. in Phoenix. He claims the examiners were unfair to his institution.

Mr. Wall and Mr. Martin voted in favor of letting Lincoln out if it can pass an exam by Bank Board regulators based in Washington. That exam is under way. Lincoln also must buy a thrift in another district first, then transfer its headquarters there.

Board member Lawrence White voted against the move. "I was in the middle," Mr. Wall said on Wednesday. ■

Are Municipal Variable Rates Giving You A Headache?

RATE RELIEF

The Municipal Variable Rate Information Service from The Bond Buyer can make operations life a lot more bearable. Our service allows you to:

➔ credit customers quickly & precisely
➔ verify payments accurately
➔ close-out receivables promptly
➔ increase productivity

Our bond coverage is in-depth, and our range of municipal contacts is far-reaching. We are proud of the service's personal touch. For variable rate relief, contact Cindy Ellis at **943-2876** or outside New York at **1 800 322-0047** or Andy Spivack at **888-5508**.

Thrift Execs Won Big Raises in '87

➜ **Continued from Page 10**

Great Western Bank, Beverly Hills, profits fell 35.6%, but its chairman, James F. Montgomery, received a 4.3% boost in compensation to $1.128 million, to finish fourth.

Ian D. Campbell, a spokesman, said Mr. Montgomery is underpaid given the success of Great Western. Core earnings were up in 1987, he said, and overall profits were down only because of accounting changes and the writeoff of the Federal Savings and Loan Insurance Corp. secondary reserve fund.

The Great Western income statement for 1987, however, shows core earnings lower than in 1986 on a pretax and tax-adjusted basis, with core earnings excluding gains on asset sales, loan-loss provisions, the FSLIC secondary reserve charge, and gains or losses on subsidiary sales.

Merrill Butler, executive vice president of Financial Corporation of America, parent of the insolvent American Savings and Loan Association, Stockton, Calif., saw a 34.9% compensation increase to $730,897 last year. In the same period, American lost $467.5 million, a 470% nosedive. Payments to Victor H. Indiek, FCA executive vice president, rose 88% to $536,275.

"In both cases, the increases reflected well-deserved bonuses," said Layna Browdy, an FCA spokeswoman. "Merrill Butler heads up the real estate division and has the task of disposing of problem real estate, restructuring problem loans, managing real estate. He has consistently exceeded the ambitious goals of that division.

"American Savings has had enormous loan-quality problems," she said. "The only way to dig out of that is a first-class real estate job."

The MCS Associates survey indicates that the link between pay and company performance is relatively weak.

For example, Donald L. Thomas, chairman and chief executive of troubled Anchor Savings Bank, Northport, N.Y., was paid $747,436 in 1987. Earnings at Anchor, which has $7.7 billion in assets, fell 49% last year, yet Mr. Thomas' compensation was higher than that of 97% of executives of other publicly held thrifts, including much larger institutions.

The MCS study found a return on assets in 1987 of 0.84% for the surveyed group. In contrast, the median ROA achieved by the top 25% of companies as measured by profitability was 1.37%, 63% greater than for the entire sample. The median ROA for the bottom 25% was 0.12%, 86% less than for the overall sample.

"Our statistical regression analysis indicated that the highest paid executives at the top 25% earned, on average, only about 20% more than their counterparts at the bottom 25%," Mr. Rosenbaum said. "This small differential is insignificant when compared to the average differential in performance by these companies.

"The survey results do show that the strong traditional relationship between the highest paid executive's compensation and asset size still holds," he said. "Over 73% of the variance in total cash compensation was explained by the variance in asset size."

The survey by MCS Associates also showed that:

- Incentive plans have become almost universal at thrifts and were found at 98% of the surveyed companies. Incentive plans are short term (based on the annual performance of the executive) or long term (based on company profitability and stock performance).
- Incentives and other cash compensation ranged from 12% to 49% of base salary, with a 29% average overall.
- Employee stock ownership plans were in use at 33.9% of surveyed thrifts, up 59%. ■

[1] Compensation is shown for the latest fiscal year and is annualized if paid for only a partial year. Bonus, salary, deferred compensation, and other forms of cash-equivalent compensation are shown together. Deferred compensation and bonuses, where applicable, are shown for the amount accrued during the fiscal year. Compensation does not include the premium value of stock options exercised or stock options awarded. Severance pay and signing bonuses are not included.

Source: Data are from proxy statements, in which public companies are required to report cash compensation paid to each of the five most highly compensated executive officers earning more than $60,000, as well as directors' fees and benefit plans offered.

Mac Widens Lead over ATM Networks, Survey Shows

Top 10 Regional ATM Networks

Based on interchange (interbank) transactions

1987 Rank	1986 Rank*	Network, home state	Interchange Uses per card Per year	Interchange Transactions (mil./month)	Change In year
1	1	**Mac/CashStream¹ (Pennsylvania)**	14.4	7,929	4 %
2	9	**NYCE (New York)**	5.2	3,981	127
3	2	**Pulse (Texas)**	6.6	3,964	31
4	3	**Exchange/Accel (Washington)**	8.0	3,333	11
5	5	**Honor (Florida)**	6.8	2,905	30
6	19	**Owl (Ohio)**	11.0	2,833	243
7	–	**Money Station (Ohio)**	4.8	2,744	...
8	–	**Most (Virginia)**	8.0	2,636	...
9	8	**Cash Station (Illinois)**	14.0	2,583	29
10	4	**Mpact (Texas)**	13.9	2,432	(11)

*1986 comparisons not available for networks not in that year's top 20 list.

¹Networks consolidated in 1988. Because only a portion of CashStream's volume is included, the transaction total and percentage increase understate the full impact of the merger. In 1986, Mac ranked first with 5.6 million transactions per month, CashStream seventh with 2,042 transactions per month.

Source: Speer & Associates, Atlanta; average monthly data for 1987.

➡ **Continued from Page 1**

ed in the survey. Therefore, Mac's lead probably was understated.

Mac and CashStream's combined 4,500 ATMs in six eastern states thus handled at least twice as much interchange volume as the second biggest network in 1987. Mac alone had slightly less than double its closest rival's volume the previous year.

Speer, which is based in Atlanta and counts several major ATM networks among its clients, builds its survey around interchange volume. Because it measures customers' use of machines away from their own financial institutions, interchange volume is "the No. 1 success factor for a shared network," the company said in its survey report.

Speer gathered data from only 47 of the 100 largest shared networks, so its rankings are less comprehensive than those of *Bank Network News* and *The Nilson Report*, trade newsletters that follow the electronic banking industry.

Different Results

In its most recent annual survey, using September 1987 figures, *Bank Network News* listed five networks among the Top 20 in interchange volume that did not show up in Speer's survey. The biggest of the missing is X-Press 24, a network operated by BayBanks Inc., Boston, which *Bank Network News* ranked second and which was in Speer's Top 20 for 1986.

Speer also averages transaction totals over a 12-month period, which tends to understate the current volumes of fast-growing networks. For example, NYCE shows up on the Speer list with 3.98 million interchange transactions, but that rose to 6.2 million in May 1988.

Speer said NYCE will challenge Mac for first place in the next two years. Its rate of 5.2 transactions per card per month, low by industry standards, is likely to rise among NYCE's 11.2 million cardholders — one of the largest of all customer bases.

By focusing on interchange volume, Speer disregards at least two other key measures of network size — total number of machines and total transactions. NYCE is the biggest by these measures, followed by Star System Inc. of California, Money Station of Ohio, and Pulse of Texas. Speer's survey ranked Money Station seventh in interchange volume with 2.7 million transactions per month, and Star System barely missed the Top 10 with 2.3 million.

Star System, TransFirst Corp.'s MoneyMaker network in Texas, Money Station of Ohio, and the Treasurer of New Jersey all broke into Speer's Top 20 this year.

The Owl network, owned by Central Trust Co., Cincinnati, leaped from 19th to 8th place after joining the statewide Money Station network. MTech Corp.'s Mpact system suffered with the Texas economy and fell from 4th to 10th.

'Over-ATMing' Continues

Speer pointed out that the 47 networks in its data base accounted for 68% of the 70,000 ATMs in the United States at the end of 1987. Therefore, if the Speer listings are not as complete as some others, they do reflect trends in the ATM market such as saturation, which Speer and other industry analysts have observed in recent years.

The consulting firm calls this phenomenon "over-ATMing" to suggest that the availability of ATMs outstrips consumer demand for the service.

Interchange volume at the 20 largest ATM networks grew 45% last year to 54.2 million per month at yearend, while the number of ATM installations was rising 40% to 70,000. The five-percentage-point difference was "not sufficient to stop the over-ATMing trend among regional network members and terminal providers," said Richard Speer, president of Speer & Associates.

Speer's data also reveal a growing concentration in the ATM networking business, with the biggest networks tending to accumulate ever-larger shares of the market at the expense of smaller organizations. The Mac-CashStream consolidation reinforces the notion that the big are getting bigger, but Speer backs that up with aggregate statistics.

The top 20 networks accounted for 80% of all interchange transactions at ATMs last year, and their proportion will grow to 85% by 1990, Speer predicted. The top 20 also linked a total of 39,252 machines in their systems, 40% more than in 1986 and 56% of all ATMs in the United States.

The top 15 networks — which Speer calls "superregionals" — averaged three million monthly interchange transactions in 1987, more than three times the volume of the next 15 most active systems.

"Speer & Associates attributes the differences in performance to the higher levels of convenience offered by the larger networks in terms of sheer geographical coverage, and to the greater awareness that larger networks typically create with signs and more intense marketing campaigns," the survey report said.

The major networks are expanding geographically and earning the "superregional" designation; for example, NYCE reaches into 21 states, Pulse and Star into six each. Speer said the basic character of the Top 20 ranking will not change much in the next few years.

Of the 20 biggest networks, 16 meet Speer's definition of superregional by doing at least two million interchange transactions per month. There were only eight of these last year out of an estimated 175 shared ATM systems in the United States.

"Probably no more than two additional networks have the potential to reach superregional status over the next year or so," Mr. Speer said.

Magic Line in Michigan, Metroteller in New York State, Rocky Mountain BankCard System in Colorado, and Treasurer all had at least 1.5 million monthly transactions last year on their way to becoming superregionals.

Networks that reach the 2-million-per-month threshold are likely to survive as independents, while many of the smaller networks will be merged and consolidated, Speer said in a four-year projection that accompanied the 1987 shared-network report. The superregionals will account for 77% of interchange volume in 1988 and 78% in 1991, while several other regional networks below that top tier will drop to 15% in 1991 from 16% this year. Another 150 independent networks will divide 4% of the market this year and only 3% in 1991.

Speer said that between the end of 1988 and 1991, the number of ATMs will rise from 80,000 to 96,000, the number of debit cards from 160 million to 186 million, and the annual number of ATM transactions from 4.6 billion to 7 billion. Of total ATM transactions, the percentage of interchange transactions would increase from 18.3% to 19.1%.

The Speer survey did not include retail payment systems such as Interlink in California and Cactus Switch in Arizona. Though technologically similar to shared ATM networks, these systems currently handle only point-of-sale payments.

Speer did find that 25 of the 47 networks it surveyed processed 12 million point-of-sale transactions last year through 34,764 direct-debit terminals. That averaged out to 44 transactions per active terminal per month, a rate that Speer said is "comparable to the levels in major markets where networks have been supporting POS services for some time." ■

NYCE Lowers Transaction-Processing Fees an Average of 20%

NEW YORK — The New York Cash Exchange, the largest regional automated teller machine network, has reduced transaction processing fees for the third time since its inception in 1985.

The network, linking more than 6,000 ATMs of 360 financial institutions in 21 states, said its switching fees will fall today by an average 20%. These fees, levied on "foreign" or interchange ATM transactions, have dropped a cumulative 50% in two years.

NYCE's cost reductions reinforce a nationwide trend among ATM networks. Star System Inc., a California-based network that is the second largest in the U.S. with more than 5,000 machines, cut prices by an average 20% early this year. Smaller networks have been following suit.

Because computer costs are relatively fixed, a network's costs of processing an incremental transaction — transmitting the relevant data between member banks — comes down as the number of transactions increases. This allows the networks to pass on their economies of scale to member institutions.

NYCE's monthly switch volume currently exceeds 6 million transactions, up from 4.5 million in October 1987 when the last price reductions took effect. The network switched only 44,000 items in March 1985, its first month of operation.

Although NYCE is the nation's biggest shared network, its interchange volume is half that of Mac, a network operated in the Middle Atlantic region by Philadelphia National Bank.

In the new NYCE pricing schedule, switch fees range between 13 cents and 6 cents per transaction. Card-issuing financial institutions with the highest transaction totals pay the lowest fees.

The sliding scale ranged from 19 cents down to 9 cents in the pricing system that expired on Thursday. The old price list gave preferential treatment to charter members of NYCE — they paid a maximum of 15 cents — but this differential is now being abolished.

Fee to Join Remains

Unchanged is the one-time participation fee that members pay upon joining the network. This fee rises according to a member's size, from $5,000 to $20,000 for institutions in the New York metropolitan area, and from $2,500 to $10,000 for those in nearby states but outside the core market. Members from distant states such as California and Missouri are not charged entry fees.

"It has always been understood that we would pass the benefits of cost reductions on to our members," Elizabeth Taylor, vice president of marketing for New York Switch Corp., said in a telephone interview. New York Switch is the company based in Fort Lee, N.J., that administers the NYCE operation.

New York Switch officials continually review NYCE's financial condition, Ms. Taylor said. But a recently concluded data processing agreement with Deluxe Data Systems, Brown Deer, Wis., helped the price-cutting process along.

Deluxe obtained a five-year extension of its contract to deliver switching services to the network. The contract "allows us to plan with some certainty of what our own costs will be," Ms. Taylor said.

"The terms of our processing arrangement with Deluxe allow us to be extremely competitive in both the performance and the pricing that we can offer our members," said Alan P. Pohlman, president of the network. He added that the series of fee reductions creates a positive image for NYCE as it seeks to attract and keep member institutions.

While financial institutions' cost of membership in NYCE and other networks has been declining, there is no sign that consumers are seeing any benefits. If anything, cardholders are finding it more common to be charged fees for using foreign ATMs.

Recent surveys by the American Bankers Association and by independent researchers have shown that a majority of banks with more than $500 million in assets charge for transactions performed at ATMs they do not own, with the average cash withdrawal fee exceeding 60 cents per transaction.

Prices charged to cardholders are "totally an individual bank decision," said Ms. Taylor of NYCE. "We as an organization never make or suggest policy respecting the member banks' pricing decisions. The bank-customer relationship is treated as sacred."

VOL. CLIII NO. 130 Wednesday, July 6, 1988 153rd Year

Today

Japanese banks posted a 21.1% rise in pretax profits for the year ended March 1. The increase was a record for the 87 members of the Federation of Bankers Associations of Japan. ____ 2

Chemical Bank has filed with the SEC to issue its first securities backed by credit card receivables. ____ 2

Salomon Brothers was the leading underwriter of asset-backed securities in the second quarter of 1988, as the volume of new issues jumped almost 75% from the previous quarter. __ 2

Gov. James J. Blanchard has signed legislation allowing Michigan banks to open branches anywhere in the state beginning Aug. 1. ____ 2

A listing of the FDIC-insured banks that have failed or been rescued so far this year includes 87 companies that were liquidated or merged. And 15 other banks have received assistance to keep from failing. ____ 10

Executive Changes ____ 5
In the News ____ 3

COMMENT

The single most important ingredient of an ethical corporate culture is the example set by senior management, according to Susan S. Spagnola, vice president-senior counsel of Chemical Bank. ____ 4

TECHNOLOGY

Visa is gaining ground in its battle with the Federal Reserve System to process automated clearing house transactions. The Hawaiian Electronic Funds Transfer Association plans to begin clearing direct salary deposits and other electronic payments through Visa's network by October. 3

MasterCard and Visa, in their latest skirmish, are arguing over the cause of an industrywide decline in credit card losses. ____ 6

Automated Financial Systems claims to be the leading software provider in commercial loan systems for big banks. Although its systems run on IBM mainframes, the company, based in Exton, Pa., has made its mark without an IBM marketing agreement. 6

J.C. Penney's payments and communications network has won the business of credit card authorization and data capture for Unocal Corp.'s service stations in the West. ____ 7

A Sallie Mae software package is helping Boatmen's National Bank of St. Louis process and track the more than 2,000 student loans it disburses each month. ____ 7

Worth Repeating

With the relatively weak dollar, there is still the possibility of foreign buyers. And the New York banks are certainly still interested in doing deals.

Virginia A. Adair, vice president of Merrill Lynch Capital Markets, on the merger situation in New Jersey. [Page 1]

Random Thoughts

By SANFORD ROSE

Theo H. Pitt Jr., chairman of the U.S. League of Savings Institutions, recently told a meeting of the New York Society of Securities Analysts that the interest-rate-mismatch problem of the thrift industry is not nearly as serious as many people suggest. Barring a massive increase in rates, averred the trade association executive, the thrifts are in relatively good shape.

Mr. Pitt is wrong — seriously wrong. Calculations based on Federal Home Loan Bank Board data indicate that even a 100-basis-point increase in rates would gravely damage the savings and loan industry.

If sustained over a period of one year, such a rise would cost the industry, other things being equal, $1.4 billion in income — more than it earned after taxes in 1986. If sustained over a three-year period, it would wipe out $4.6 billion in income — approximately three quarters of the industry's net after-tax profit for the 1984-86 period.

The thrift industry's one-year gap — calculated by subtracting the dollar volume of liabilities that will be repriced in the next year from

After Flurry, Jersey Deals Wane

By GORDON MATTHEWS

NEW YORK — A year ago this week, New Jersey announced it would be the first major state, other than New York, to open its borders to nationwide banking on a reciprocal basis. The flurry of activity that followed and the quiet that has since descended are now being assessed by banking analysts and industry observers.

Among the principal developments were the nation's largest banking deal, which resulted in the creation of a new superregional bank, First Fidelity Corp.; a major interstate deal for the state's third largest banking company, United Jersey Banks; and the foreign acquisition of the fourth largest company, First Jersey National Corp.

Nearly as important as this $2.5 billion trio of deals — all unveiled in the month after New Jersey's announcement — are a pair of nondevelopments:

First, there have been no New Jersey deals completed by major banking companies in New York, which had long waited for the chance to move beyond their borders and then found other constraints on their plans.

Chemical New York Corp. agreed several years ago to acquire Horizon Bank Corp., Morristown, N.J., after the

Bank Failures Keeping Pace With Last Year

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Halfway through 1988, bank failures nearly match the record pace set in the first half of 1987. But this year the frequency and cost of government rescues of failing institutions may hit all-time highs.

In the first six months of this year, the banking system withstood 87 failures. At this time last year, 96 banks had closed, according to government figures.

Since January, however, 15 banks have been kept open with $2.4 billion in federal aid. By July of 1987, four banks had avoided failure as a result of government intervention. In all of 1987, a total of 19 bailouts had occurred at a cost to the Federal Deposit Insurance Corp. of $1.1 billion.

Bank Failure List

the dollar volume of assets to be repriced in the same period and dividing that number by total assets — amounts to minus 19% (the negative number indicating, of course, that more liabilities than assets reprice). The three-year gap equals minus 21%. These numbers could spell disaster in a period in which most analysts forecast rising rates.

Mr. Pitt is fond of asserting that the thrift problem is confined to a comparatively small percentage of savings and loans — those afflicted with much-publicized credit woes (although even he would probably have to admit that the percentage shows signs of rising). The great bulk of associations, it is claimed, are safe and sound.

But this is an illusory soundness, built on the temporary success of a widespread interest rate gamble.

What separates many of the so-called good associations (the interest rate gamblers) from the bad ones (the credit high rollers) is merely an inconsistent application of accounting principles. When a loan goes bad, the regulators force it to be marked to market, exposing the loss of equity. But when an interest rate mismatch begins to sour, there is no requirement to mark to market.

A rise in rates will adversely impact institutions that are long assets — asset durations greater than liability durations — by reducing the worth of assets by more than the worth of liabilities. Despite the lack of accounting recognition, the loss of equity values is just as real as in the case of defaulted loans, although the magnitude of the loss may initially be less. Eventually — and in many cases rather quickly — this decline in real net worth is reflected in lower income and lower accounting net worth.

As a spokesman for the thrift industry, Mr. Pitt is required to be optimistic. He is not, however, required to be pollyannish.

The sad fact is that savings and loans may be on the point of replaying, albeit with some attenuation, what has been termed phase one of the industry crisis — the crisis of 1980-82, when rising rates resulted in huge losses and failures for those whose maturities (durations) were seriously mismatched. This crisis, of course, led ineluctably to phase two of the thrift drama — the post-1982 debacle of credit-loss-induced failures and near-failures.

Many institutions that limped through phase one of the crisis attempted to recoup their losses by more expansive risk taking, much like a drunk who tries to stave off a hangover by prolonging his binge. As Dan Brumbaugh, the former deputy chief economist of the Bank Board, puts it: "Financial gains accrue primarily to owners and managers if an insolvent institution takes a significant risk that succeeds, while the deposit insurer bears most of the cost if the risk fails. Deposit insurance thus fosters a 'heads, I win; tails, the FSLIC loses' attitude in insolvent institutions that are allowed to continue operating.

"These perverse effects . . . also apply to depository institutions that are likely to become insolvent. Increased risk taking offers possible improvement and resurrection in a relatively short time. . . ."

As we now know, resurrection was quite selective in the post-1982 period. Those associations that tried to recover by replacing their interest rate bets did famously, at least for a while, because of the dramatic fall in rates. But those that elected to gamble on credit rather than exclusively in the interest rate area foundered. Unable to manage the risks of such activities as acquisition and development lending, they ultimately perished, leading in the process to the bankruptcy of the FSLIC.

Is the industry condemned to oscillate, almost mechanically, between ruinous credit losses and equally ruinous interest rate losses until the public, in vexation, votes to nationalize? Mr. Brumbaugh notes that the 1987 increase in interest rates accounted for a significant part of the thrift industry's losses during that year. Whether these losses adumbrate a rerun of the vicious cycle cannot be known with certainty because we cannot predict interest rates.

But the 1987 performance, warns the former Bank Board economist, is a sobering reminder of the interest rate danger. It is a danger that people like Mr. Pitt are foolish to minimize.

□ □ □

How does commercial loan pricing vary by maturity? Loan Pricing Corp. of New York has analyzed some 1,400 C&I loans made between mid-1987 and mid-1988. All loans are variable-rate credits with a Libor option, so that in each case the maturity of the yield is quite short.

However, the maturity of the facility varies sharply, and so does the pricing. The pricing pattern can be best delineated by a U-shaped curve. Raw spreads are high at the short end of the maturity curve, averaging about 175 basis points over Libor for under-six-month credits.

In the intermediate term — facilities with maturities of from 24 to 36 months — spreads decline sharply, averaging around 75 basis points over Libor. Then, in the longer term — facilities lasting upward of four years — spreads begin rising again, reaching an average of around 185 basis points on six-year-plus maturities.

The fee pattern traces a similar curve. Upfront fees are high for short-dated facilities, then drop sharply over the intermediate term, only to resume their climb for facilities with maturities of longer than four years.

This pricing pattern, superficially anomalous, is more easily understood when we examine the typical purpose of loans of various maturities. Customers for intermediate-term credit generally borrow for working-capital needs. The two-to-three-year revolving credit is the most uncomplicated of loans. It is also the bread and butter of most banks. What's more, many borrowers can, and frequently do, obtain at least a portion of their working-capital funds from insurance companies or in the commercial paper market.

Since this type of credit is relatively straightforward and is offered by practically all lenders, it is apt to be the most competitively priced vehicle. Banks simply cannot charge very much for these plain-vanilla accommodations, regardless of their maturities. Indeed, the evidence indicates that the maturity premium for working-capital revolvers is practically nonexistent, amounting to around two to three basis points per year.

Short-dated credits are predominantly bridge loans for capital equipment or real estate construction. At present, these loans appear to be concentrated in the water-transportation, textile-mills, primary-metals, and services industries.

Banks have little effective competition from nonbank lenders in the provision of this type of credit. Borrowers cannot very easily access the commercial-paper or private-placement markets for bridge loans, especially since most need considerable financing flexibility — i.e., they want to take down the funds as needed, instead of borrowing in a lump sum. Banks are thus able to charge spread and fee premiums for setting up a short-term facility that allows, say, a manufacturer to draw against a predetermined line in order to pay for equipment whose delivery date is uncertain.

In effect, the borrower is paying extra for the superior liquidity afforded by bank-type financing. Additionally, the fact that the bank has to recapture its fixed setup cost in a relatively short period of time tends to raise the price of this type of credit.

The very long-term credits are extended primarily for takeovers, leveraged buyouts, and corporate recapitalizations. These loans are currently most popular in such industries as health care, motion pictures, hotels, and of course air transportation. Such customized facilities are the most complicated and the riskiest, so it is easy to see why banks have been able to charge the highest fees and spreads.

Thus the smooth and highly symmetrical dish-shaped pattern of pricing by maturity is readily explicable. Banks can charge more for short loans because of liquidity and payments-mechanism factors that tend to restrict competition from nonbank lenders. They can charge more at the long end because of complexity and risk factors.

But they can't charge nearly as much for the intermediate-term loan, given its standardized purpose and the intensity of the competition — bank and nonbank — for the borrower's business. It is therefore not hard to figure out why bank lenders will gravitate inexorably to either end of the loan-maturity spectrum. ■

BRIEF COMMENT

Spirit of Law Guides Manager's Decision

The following excerpt is from a speech by Susan S. Spagnola, vice president-senior counsel of Chemical Bank, delivered June 28 at Pace University. The presentation, titled "Making Ethics Work," was sponsored by the Institute of Business Ethics.

□

WITH or without a written code of ethics, the single most important ingredient of an ethical corporate culture is the example set by senior management — through actions and written and oral communications.

When employees know what type of behavior is expected of them and what is sauce for the goose is sauce for the gander, business ethics become not only valued and respected, but a necessary part of any business decision.

For example, a friend of mine is an international lawyer for a U.S. firm. She was asked to give her opinion on an activity taking place in South America that was tantamount to price-fixing and clearly would be in violation of U.S. antitrust laws.

She advised her boss, a senior executive, that although the activity would be illegal under U.S. law, this might not be the case under the governing foreign law, and she would look into it. The immediate and unequivocal response: "Don't bother; we are a U.S. company and the spirit of the U.S. law, if not the letter, governs our business wherever we are."

In the context of implementing business ethics, this response was worth more than any written rule or formalized compliance program. ■

FDIC-Insured Banks that Have Failed or Been Rescued in 1988

Washington Bureau

WASHINGTON — The following is a list of U.S. banks insured by the Federal Deposit Insurance Corp. that failed or received FDIC financial assistance during the first half of 1988.

A bullet (•) denotes an agricultural bank, defined by the FDIC as having agricultural loans exceeding 25% of its total loans.

The number of insolvent banks that were either liquidated or merged into other companies is 87. Fifteen banks received FDIC assistance to keep them from failing.

At mid-1987, there were 96 failures and four banks needing assistance.

In all of 1987, 184 banks closed and 19 received assistance. In 1986, 138 banks closed and seven got financial help from the FDIC.

□

1. **Commerce Bank of Plano**, Plano, Tex. closed Jan. 7. Insured deposits of $40.6 million transferred to Quinlan State Bank, Quinlan, Tex. Deposits of $251,000 were not insured.

2. **The North American Bank**, Phoenix, closed Jan. 8. Insured deposits of $29.4 million to Columbia Bank, Avondale, Ariz. Deposits of $496,000 were not insured.

3. **The Moran National Bank**, Moran, Tex., closed Jan. 14. Deposits of $15.9 million assumed by the Peoples State Bank, Clyde, Tex.

4. **Colonial Bank**, New Orleans, closed Jan. 14. Deposits of $47.4 million assumed by Pontchartrain State Bank, Metairie, La.

5. **Balboa National Bank**, National City, Calif., closed Jan. 14. Deposits payoff. All but $75,000 of total deposits of $25.2 million were within the federal insurance limit.

• 6. **Aredale State Bank**, Aredale, Iowa, closed Jan. 20. Deposits of $9.9 million assumed by First Security Bank & Trust Co., Charles City, Iowa.

• 7. **Cedar Vale State Bank**, Cedar Vale, Kan., closed Jan. 21. Deposits of $11.5 million assumed by Chisholm Trail State Bank, Wichita, Kan.

8. **The Williston Basin State Bank**, Williston, N.D., closed Jan. 21. Deposits of $12.1 million assumed by First National Bank & Trust Co. of Williston, N.D.

9. **Louisiana Commercial Bank**, Madisonville, La., closed Jan. 21. Deposits of $28.7 million assumed by Pontchartrain State Bank, Metairie, La.

10. **Sam Houston National Bank of Walker County**, Huntsville, Tex., closed Jan. 21. Deposits of $37.5 million assumed by the Huntsville National Bank, Huntsville, Tex.

11. **United Mercantile Bank**, Shreveport, La., closed Jan. 21. Deposits of $70.1 million assumed by Hibernia National Bank, New Orleans.

12. **Northwest Bank**, Dallas, closed Jan. 21. Insured deposits of $57.5 million transferred to Haltom Bank (American Bank of Haltom City), Haltom City, Tex.

13. **Bank of Casper**, Casper, Wyo., closed Jan. 22. Deposits of $5.4 million assumed by First Wyoming Bank-Casper, Casper, Wyo.

14. **Port City Bank**, Houston, closed Jan. 28. Deposits of $59.3 million assumed by Channelview Bank, Channelview, Tex.

15. **Houston Commerce Bank**, Houston, closed Jan. 28. The FDIC paid off deposits of $36.6 million.

16. **The Trust Bank**, Hialeah, Fla., closed Jan. 29. Insured deposits of $159.6 million transferred to Republic National Bank of Miami, Miami.

17. **The Bank of Louisburg**, Louisburg, Kan., closed Feb. 3. Deposits of $20.9 million assumed by Peoples National Bank & Trust, Ottawa, Kan.

18. **Bank of Dallas**, Dallas, closed Feb. 5. Deposits of $170.2 million assumed by Deposit Guaranty Bank, also of Dallas.

19. **First Houston Bank N.A.**, Houston, closed Feb. 11. Insured deposits of $28 million transferred to Texas Commerce Bank, N.A., also of Houston.

20. **First State Bank**, Oilton, Okla., closed Feb. 11. Deposits of $11.7 million assumed by the American National Bank of Bristow, Bristow, Okla.

21. **First State Bank**, White Cloud, Mich., closed Feb. 12. Deposits of $36.5 million assumed by Peoples State Bank, St. Joseph, Mich.

22. **Global Bank**, Hialeah, Fla., closed Feb. 12. Deposits of $19.2 million assumed by Ocean Bank, Miami.

23. **Basin State Bank**, Vernal, Utah, closed Feb. 12. Deposits of $11.3 million assumed by Zions First National Bank, Salt Lake City.

• 24. **The Farmers and Merchants Bank of Hill City**, Hill City, Kan., closed Feb. 18. Deposits of $16.6 million assumed by Farmers and Merchants Bank of Hill City, a newly chartered subsidiary of Stockton Bancshares Inc., Stockton, Kan.

25. **Mustang Community Bank**, Mustang, Okla., closed Feb. 18. Deposits of $9.6 million assumed by the First National Bank of Moore, Moore, Okla.

26. **Collin County State Bank**, Melissa, Tex., closed Feb. 25. Deposits of $11.9 million assumed by Willow Bend National Bank, Plano, Tex.

27. **Harris County Bank-Houston N.A.**, Houston, closed Feb. 25. Insured deposits of $78.3 million transferred to Omnibanc South N.A., Houston. About $663,000 in 28 accounts exceeded insurance limit.

28. **American National Bank**, Stafford, Tex., closed Feb. 25. Deposits of $26.3 million assumed by Park National Bank of Houston.

• 29. **The Home State Bank**, Russell, Kan., closed March 3. Deposits of $53.7 million assumed by First National Bank and Trust Co., Salina, Kan.

30. **Flower Mound Bank**, Flower Mound, Tex., closed March 3. Deposits of $17.2 million assumed by Security Bank, also of Flower Mound.

31. **The First National Bank and Trust Co. of Cushing**, Cushing, Okla., closed March 10. Insured deposits of $59.1 million transferred to the American Bank of Bristow, Bristow, Okla.

32. **First American Bank and Trust of Baytown**, Baytown, Tex., closed March 10. Deposits of $38.5 million assumed by Citizens Bank and Trust Co. of Baytown.

• 33. **Hayesville Savings Bank**, Hayesville, Kan., closed March 10. Insured deposits of $35.6 million transferred to Farmers Savings Bank, Fremont, Iowa.

34. **Security Bank of Denver N.A.**, Denver, closed March 10. Deposits of $16.8 million assumed by City Center National Bank of Aurora, Aurora, Colo.

35. **First American Bank and Trust of Manvel**, Manvel, Tex., closed March 10. Insured deposits of $12.4 million transferred to First National Bank of Alvin, Alvin, Tex.

36. **First American Bank and Trust of Friendswood**, Friendswood, Tex., closed March 10. Deposit payoff. All but $143,000 of total deposits of $6.4 million were within the federal insurance limit.

• 37. **Frenchman Valley Bank**, Palisade, Neb., closed March 10. Deposit payoff. All but $101,000 of total deposits of $2.6 million were within the federal insurance limit.

38. **First Intercounty Bank of New York**, New York City, closed March 11. Insured deposits of $36.1 million transferred to Community National Bank and Trust Co., also of New York City.

39. **First National Bank of Port Allen**, Port Allen, La., closed March 17. Deposits of $17.6 million assumed by Iberville Trust and Savings Bank, Plaquemine, La.

40. **Citizens State Bank**, Gibbon, Minn., closed March 18. Deposits of $14.9 million assumed by Minnesota Valley Bank, Redwood Falls., Minn.

41. **State Bank of Morgan**, Morgan, Minn., closed March 18. Deposits of $19.4 million assumed by Farmers and Merchants State Bank, Springfield, Minn.

42. **Cashion Community Bank**, Cashion, Okla., closed March 24. Deposits of $6.4 million assumed by Community State Bank, a newly chartered subsidiary of Warrior Bank Corp., also of Cashion, Okla.

43. **Century State Bank**, Tulsa, Okla., closed March 24. Deposits of $69.4 million assumed by the Fourth National Bank of Tulsa.

44. **First National Bank of Del City**, Del City, Okla., closed March 25. Insured deposits of $26.2 million transferred to Lincoln National Bank, Oklahoma City, including $29,000 in 40 accounts that exceeded the insurance limit.

45. **First Bank & Trust**, Tomball, Tex., closed March 31. Deposits of $56.7 million assumed by the Hamilton National Bank, Hamilton, Tex.

46. **Union Bank and Trust Co.**, Oklahoma City, closed March 31. Deposits of $167.5 million assumed by a newly chartered bank of the same name.

47. **Central National Bank**, Dallas, closed April 7. Deposits of $15.8 million assumed by Deposit Guaranty Bank, also of Dallas.

48. **Home State Bank**, Trent, Tex., closed April 7. Insured deposits assumed by the Farmers and Merchants National Bank of Merkel, Merkel, Tex.

• 49. **Citizens State Bank of Eagle Bend**, Eagle Bend, Minn., closed April 8. Deposits of $9.3 million assumed by Lake County State Bank, Long Prairie, Minn.

• 50. **Jennings Bank**, Jennings, Kan., closed April 14. Deposits of $6.8 million assumed by Bank of Oberlin, Oberlin, Kan.

51. **Cy-Fair Bank N.A.**, Harris County, Tex., closed April 14. Insured deposits of $11.5 million transferred to Charter National Bank-Willowbrook, Houston, Tex.

52. **Metropolitan Industrial Bank**, Denver, Colo., closed April 14. Insured deposits of $12.6 million assumed by Resources Industrial Bank, Denver.

53. **Colonial Thrift and Loan Association**, Culver City, Calif., closed April 15. Deposits of $22.5 million assumed by Southern Pacific Thrift and Loan Association, Beverly Hills, Calif.

54. **McAllen State Bank**, McAllen, Tex., closed April 19. Deposits of $550 million assumed by First City National Bank of Houston. Both banks are subsidiaries of First City Bancorporation of Texas.

55. **Texas National Bank**, Austin, Tex., closed April 21. Deposit payoff. All but $95,000 of total deposits of $16.9 million were within the federal insurance limit.

56. **Citizens National Bank**, Colorado Springs, Colo., closed April 21. Insured deposits of $14.4 million transferred to State Bank and Trust of Colorado Springs.

57. **Unity Bank**, Dayton, Ohio, closed April 22. Deposits of $5.9 million assumed by the First National Bank, Dayton.

58. **The Village Bank**, Great Falls, Mont., closed April 22. Deposits of $22.1 million assumed by the Village Bank of Great Falls, a newly chartered subsidiary of Shelby Investments Inc., also of Great Falls.

59. **Oak Park Bank**, Oak Park Heights, Minn., closed April 29. Deposits of $15.3 million assumed by the St. Croix Valley Bank, also of Oak Park Heights.

60. **Lincoln National Bank**, Arlington,

Tex., closed May 5. Deposits of $11.5 million assumed by Tarrant Bank, Fort Worth, Tex.

61. **Union Bank & Trust**, Dallas, closed on May 5. Deposits of $35.6 million assumed by Cornerstone Bank National Association, also of Dallas.

• 62. **Forest City Bank and Trust Co.**, Forest City, Iowa, closed May 6. Deposits of $26.5 million assumed by Liberty Bank and Trust, also of Forest City, Iowa, a newly chartered subsidiary of Winnebago County Bancorp., Hampton, Iowa.

63. **The First State Bank**, Childress, Tex., closed May 12. Deposits of $14.3 million assumed by Citizens Sate Bank of Dalhart, Dalhart, Tex.

64. **The American State Bank**, Yankton, S.D., was merged on May 18 with First Dakota National Bank, also of Yankton. The $67 million-asset bank was bolstered by $4.28 million from the FDIC and $3.25 million from the shareholders of First Dakota.

65. **National Bank of Texas**, Houston, closed May 19. Deposits of $25.1 million assumed by Old Braeswood National Bank, also of Houston.

66. **Lone Star Bank-Harris County**, Baytown, Tex., closed May 26. Deposits of $12.5 million assumed by Citizens Bank and Trust Co., also of Baytown.

67. **First National Bank of Kingwood**, Kingwood, Tex., closed May 26. Deposits of $15 million assumed by Interstate Bank North, Houston.

68. **The First State Bank**, Rockwall, Tex., closed May 26. Insured deposits of $36.7 million transferred to Community Bank Rockwall, a newly chartered subsidiary of Community Bankers Inc., Granbury, Tex.

69. **Sandy State Bank**, Sandy, Utah, closed May 27. Deposits of $6.7 million assumed by Zions First National Bank, Salt Lake City.

• 70. **Community State Bank**, Whiting, Iowa, closed June 2. Deposits of $5.3 million assumed by Sloan State Bank, Sloan, Iowa.

71. **Guaranty Bank**, Dallas, closed June 2. Deposits of $73.7 million assumed by the Red Oak State Bank, Red Oak, Tex.

72. **Security Bank of Boulder**, Boulder, Colo., closed June 2. Deposits of $13 million assumed by First National Bank in Boulder.

73. **Security Bank of Aurora**, Aurora, Colo., closed June 2. Deposits of $10.2 million assumed by Security Bank of Colorado, also of Aurora, a newly chartered subsidiary of First United Bancorp.

74. **River Plaza National Bank**, Fort Worth, closed June 2. Deposits of $43.7 million assumed by Tarrant Bank, also of Fort Worth.

75. **Williamstown Bank N.A.**, Houston, closed June 2. Deposits of $23.5 million assumed by City National Bank, Houston.

76. **Parkway Bank and Trust**, Dallas, closed June 9. Deposits $39.3 million assumed by Deposit Guaranty Bank, Dallas.

77. **Century National Bank**, Austin, Tex., closed June 16. Deposits of $56.6 million assumed by Community National Bank, also of Austin.

78. **Kingsland National Bank**, Kingsland, Tex., closed June 16. Deposits of $13.2 million assumed by Security Bank and Trust, Fredericksburg, Tex.

79. **The Liberty Bank of Seattle**, Seattle, closed June 17. Deposits of $19 million assumed by the Emerald City Bank, also of Seattle, a newly chartered state nonmember bank.

80. **The Bank of Westminster**, Westminster, Colo., closed June 22. Deposits of $6 million assumed by First National Bank, Westminster, also in Westminster.

81. **Texas National Bank**, Victoria, Tex., closed June 23. Deposits of $12.7 million assumed by Texas National Bank of Victoria, a newly chartered subsidiary of Lone Star Bancshares Inc., also of Victoria.

82. **Northwest Bank and Trust**, Houston, closed June 23. Deposits of $89.9 million assumed by Northwest Bank, Houston, a newly chartered bank.

83. **Tri-Cities Bank and Trust**, Glenn Heights, Tex., closed June 23. Deposits of $9.2 million assumed by Abrams Centre National Bank, Dallas.

84. **The Claiborne Bank & Trust Company**, Homer, La., closed June 28. Deposits of $12.4 million assumed by the Homer National Bank.

85. **Republic National Bank**, Norman, Okla., closed June 30. Deposits of $27 million assumed by Republic Bank of Norman, a newly chartered bank.

86. **First National Bank**, Sherman, Tex., closed June 30. Deposits of $23.1 million assumed by the First National Bank of Van Alstyne, Van Alstyne, Tex.

87. **Mercantile Bank & Trust**, San Antonio, Tex., closed June 30. Deposits of $82.9 million assumed by Groos Bank N.A., San Antonio.

□

These banks, which have not failed, required financial assistance from the FDIC in order to stay open.

1. **The Peoples State Bank and Trust Co.**, Ellinwood, Kan., avoided closing Jan. 7 with $5.3 million from the FDIC. The $40.6 million-asset Kansas bank also got a $2.75 million capital injection from private investors.

2. **Jefferson Guaranty Bank**, Metairie, La., got final approval Jan. 13 for $57.5 million in FDIC assistance to prevent the $307 million-asset bank from failing. Jefferson Guaranty is now part of a newly formed holding company, Royal Windsor Holding Corp., which invested $17 million.

• 3. **Citizens State Bank**, Hayfield, Minn., avoided closing Jan. 27 with $900,000 from the FDIC. The $30.1 million-asset bank also received $1.8 million in additional capital from private local investors.

4. and 5. **Alaska Mutual Bank** and **United Bank Alaska**, both of Anchorage, got final approval Jan. 28 for a $295 million cash infusion from the FDIC. Original deal announced June 23, 1987.

6. **American National Bank**, Parma, Ohio, avoided closing Feb. 12 after receiving a guarantee from the FDIC to cover losses over the next two years up to $1 million. Shareholders put in $2.23 million to recapitalize the bank, which holds $27.2 million in assets and $24.7 million in deposits.

7. **Morehead National Bank**, Morehead, Ky., avoided closing March 15 after receiving a $1.1 million cash infusion from the FDIC. Private investors contributed $1.4 million to the failing $8.2 million-asset bank.

8. **First RepublicBank Corp.**, Dallas, Tex., received $1 billion from the FDIC March 17. A final assistance package for the $28 billion-asset bank is pending.

• 9. **Burns State Bank**, Burns, Kan., avoiding closing April 15 after receiving a $567,000 cash infusion from the FDIC. The money allowed the $4 million-asset failing bank to merge with First National Bank & Trust Co., El Dorado, Kan.

10. **First City Bancorporation of Texas**, Houston, concluded its $1.5 billion rescue April 19. The deal was announced Sept. 9, 1987. The FDIC assistance consisted of $970 million. A. Robert Abboud raised $500 million in private capital to save the $11 billion-asset bank.

11. **Bank of Santa Fe**, Santa Fe, N.M., was saved from failure April 20. The FDIC purchased a $5 million loan participation in a pool of assets, promised to purchase up to $6 million in additional assets, and bought $12 million in nonvoting, floating-rate preferred stock in the $101 million-asset bank. In return, the FDIC is entitled to an undisclosed proportion of the bank's net earnings above a certain level, will share in net recoveries on assets and claims, and will receive one-third of any gain on the sale of bank stock if it is sold in the next five years. Robert E. Keyes, a private investor, injected $7 million into the bank.

12. **Bond County State Bank**, Pocahontas, Ill., was acquired April 25 by an investor group headed by Karl D. Tauber, an Illinois banker. The group contributed $450,000 to the $6.6 million-asset bank while the FDIC pledged a cash infusion of up to $450,000 to cover deficit net worth of the bank; a guarantee of $825,000 covering losses of principal and interest on loans outstanding at the time of agreement; and indemnification up to $150,000 to cover possible losses and contingent liabilities.

13. **Citizens Bank of Tulsa**, Tulsa, Okla., was acquired April 28 by an investor group led by New Jersey businessman George A. Switlyk. The group contributed $720,000 to the $8.8 million-asset bank while the FDIC pledged a $2.075 cash infusion.

14. **The American State Bank**, Yankton, S.D., was merged May 18 with First Dakota National Bank, also of Yankton. The $67 million-asset bank was bolstered by $4.28 million from the FDIC and $3.25 million from the shareholders of First Dakota.

15. **Bank of Imboden**, Imboden, Ark., was acquired June 14 by Spring Rivers Bancshares Inc., a new bank holding company, also of Imboden. The FDIC pumped in $2.1 million to offset the bank's losses. $17.8 million-asset bank got $1.4 million in additional capital from Spring Rivers. ■

Bank Failures Keep Pace with '87, but Costs Rise

➜ Continued from Page 1

deals. In assistance deals to date this year, the FDIC has attracted $43 million in private capital and spent $2.4 billion of its own. For all of 1987, the FDIC spent $1.6 billion to keep dying banks open and pulled in $156 million in private funding.

The FDIC continues to predict that the 1988 casualty rate will approach 200, in the same range as last year, when 183 banks were closed. In each of the past four years, record numbers of banks have closed.

But FDIC Chairman L. William Seidman carefully steers clear of predicting failure rates too far into the future, merely suggesting that there will be "fewer" closings in 1989. "The next decade will be an important one for banks," he told a gathering of state bank supervisors last April.

Mr. Seidman predicts that this year the insurance fund will lose money for the first time in its 55-year history. Last month he told a group of Oregon bankers that the $18.3 billion fund may decline 10% because of FDIC aid to prop up ailing Texas banks.

The FDIC chairman, along with Federal Home Loan Bank Board Chairman M. Danny Wall, on Thursday will explain to the House Banking Committee how the federal deposit insurance funds are handling the bank and thrift industries' serious troubles.

The FDIC's staff is currently calculating what the future holds for the fund, Mr. Seidman said in a phone interview on Tuesday. He said he will reveal the agency's predictions at the congressional hearing on deposit insurance on Wednesday.

During the first half of 1988 — as in 1987 — bank closings are concentrated west of the Mississippi.

Texas, with 40 bank closings so far this year, is well on the way to retaining its title as the state with the most failures. It is expected to exceed its 1987 record of 50 bank failures this year.

Three adjacent states — Texas, Louisiana, and Oklahoma — have accounted for 62% of this year's failures. More than half of the banks that failed in 1987 were located in one of these three states, which have been hit hard by the decline in oil prices and depressed real estate.

> Texas, with 40 bank closings so far this year, is well on the way to retaining its title as the state with the most failures.

"Our problem bank list continues to grow, and nonperforming assets continue to grow," Texas Banking Commissioner Kenneth W. Littlefield said last week.

Despite the recent drought, the health of agricultural banks — those that dedicate 25% or more of their portfolios to farm loans — is improving. Last year at this time, 32 farm banks had failed. By contrast, only 10 farm banks have closed this year.

Thirty-one states are failure free so far this year; another nine states have had only one bank closing.

The FDIC must still deal soon with a handful of larger banks in need of expensive government aid. Assistance deals for BancTexas Group Inc., Dallas, and First City Bancorporation of Texas, Houston, already have consumed more than $1 billion in FDIC funds. The cash outlay to rescue struggling First RepublicBank Corp., Dallas, could hit $4.5 billion, matching the 1984 rescue of Continental Illinois in Chicago.

Mr. Seidman also has said two other Texas banks — Texas American Bancshares Inc., Fort Worth, and National Bancshares Corp., San Antonio — will be preserved this year with FDIC cash and notes.

Despite such pending transactions, Mr. Seidman appears to believe the insurance fund is coming through its darkest hour, somewhat drained but intact. He has said repeatedly in the past months that the industry will see modest improvement this year and that no unmanageable crises are in sight, despite predictions to the contrary.

That is good news to other federal regulators who watch the failures mount. "Last year almost 200 American banks failed," Federal Reserve Board Governor H. Robert Heller observed last week. "This constant hemorrhaging has to cease if we are to maintain a stable financial system and if we want to be a leader in international financial markets." ■

In the News ____ 3

COMMENT

Fed Chairman Alan Greenspan reviews fiscal policy since the October market crash and outlines the Fed's strategy for coping with inflationary pressures in 1989. ____ 8

CORPORATE FINANCE

The Bank of Boston has named a product manager to broaden the bank's role in lending to employee stock ownership plans. ____ 12

The latest twist in financial analysis of corporations, based on equity performance, has been introduced by Houlihan, Lokey, Howard & Zukin, a Los Angeles valuation firm. ____ 12

Worth Repeating

It's a measure of Japan's postwar decision to concentrate capital and energy on civilian development, rather than military development. The success of the Japanese banking industry reflects the success of that decision.

John Kenneth Galbraith, economist at Harvard University, on the dominance of Japanese banks in global rankings. [Page 1]

AN AMERICAN BANKER STATISTICAL SURVEY

US Banks Drop Out of World's Top 25

By PHILIP T. SUDO

NEW YORK — Continuing an astonishing decade of growth, Japan's banks no longer just lead the list of global deposit takers, they dominate it. And for the first time, U.S. banks have fallen entirely out of the top 25.

The top 10 deposit takers are now all Japanese — as are 17 of the top 25, and 34 of the top 100, according to the *American Banker*'s annual ranking of the world's 500 largest banks. Statistical tables for that ranking begin on page 41.

Though a good part of the gain was attributable to a favorable exchange rate, Japanese banks still increased their deposits by more than 20% in yen terms, helped by the deregulation of domestic interest rates on large liabilities.

Dai-Ichi Kangyo Bank Ltd. extended its four-year stranglehold on the top spot by increasing its deposit base to $275.3 billion. That figure is higher than the combined deposits of Citibank, Bank of America, Chase Manhattan Bank, Morgan Guaranty Trust Co., and Manufacturers Hanover Trust Co.

Citibank continued to lead U.S. banks in deposits, with $104.9 billion, despite falling to 28th this year from 17th last year. Following in succession for U.S. banks were Bank of America, ranked 45th, Chase 51st, Morgan 69th, and Manufacturers 70th.

U.S. firms fared slightly better on the holding company level, as Citicorp remained in the top 10 with $198.4 billion in assets. Japanese banking companies took 8 of the first 10 slots, including the top 7. Credit Agricole Mutuel, Paris, ranked eighth.

Bankers, analysts, and legislators expressed astonishment at the Japanese dominance of the rankings, as well as how far U.S. banks had dropped.

"It's a measure of Japan's postwar decision to concentrate capital and energy on civilian development, rather than military development," said John

Top 50	24	48
Top 100	34	34
Top 500	111	22

Random Thoughts

By SANFORD ROSE

Borrowers who think they are getting a break when they obtain a Libor-based rather than a prime-based price quote from their banks are simply deluding themselves, says consultant Roger Ertefai, a former Chase Manhattan banker who is now president of Intelecon International of New York.

Intelecon maintains that Libor-based pricing is never as cheap as borrowers believe. In fact, in 1987, the middle-market commercial borrower (annual sales of between $5 million and $150 million) with a Libor quote paid an average of 9.28% for his loan, whereas a comparably sized borrower with a prime-based quote ended up with an average rate of 9.20%, eight basis points lower. (These numbers are derived from an analysis of between 3,000 and 4,000 middle-market loans tracked by the Intelecon Rate Monitor.)

Historically, the Libor rate has fluctuated between 125 to 138 basis points below the average prime rate. Hence the borrower with a Libor option would seem to be much more favored than one whose loan

$324 Million Payout In Thrift Failure

By JIM McTAGUE and ROBERT LUKE

WASHINGTON — Federal thrift regulators closed the insolvent Farmers Savings, Davis, Calif., on Monday and spent $324 million paying off the institution's insured depositors. The payout was the third most costly settlement of accounts in U.S. banking history.

The costliest settlement was the $1.14 billion payout last month to insured depositors of American Diversified Savings Bank, Costa Mesa, Calif., by the Federal Savings and Loan Insurance Corp. The 1982 closing of Penn Square Bank, Oklahoma City, ranks second. The Federal Deposit Insur-

price is based on the higher, administered charge. But this isn't necessarily the case.

The cost of the Libor option is typically composed of three parts: the base rate, adjustments to the base rate, and the loan spread. The base rate is the raw or unadjusted market index to which a Libor loan is tied. This rather straightforward benchmark, notes Mr. Ertefai, takes a somewhat elusive turn when it enters the loan agreement.

At many banks, the benchmark is different from the rate quoted in the major newspapers. Banks, especially those that are not participants in the Eurodollar markets, will arbitrarily jack up the benchmark, adding anywhere from a sixteenth to a quarter of one percentage point over the published number, with the most common addition amounting to one-eighth. Thus the cost to the borrower goes up by about 12 basis points.

The lender then pyramids other charges for reserves as well as for such items as rounding adjustments. Depending on the bank's pricing formula and the borrower's negotiating skill, these emendations to an already inflated benchmark or base rate can vary from a sixteenth to three-eighths of a percentage point. Typically, they amount to 25 basis points. So the Libor-prime differential, originally, say, 138 basis points, is narrowed to only about 100 basis points.
